probably the best known of all the solitary islands in the world, is situated in the South Atlantic Ocean, 955 miles S. of the Equator, 760 S.E. of Ascension, 1,140 from the nearest point of the African Continent, 1,800 from the coast of S. America and 4,477 from Southampton, in 15° 55' S. lat. and 5° 42' W. long. It is 10½ miles long, 6½ broad, and encloses an area of 47 square miles, with a population (Census 1911) of 3,350. St. Helena is of volcanic origin, and consists of numerous rugged mountains, the highest rising to 2,700 feet, interspersed with picturesque ravines. The climate vies with that of Madeira in point of salubrity and evenness of temperature. Although within the tropics, the south-east "trade" keeps the temperature mild and equable. The

thermometer goes up to 84° in the town at the sea-level; but in the country, 1,800 feet above the sea, the maximum is about 74°, and the mean temperature ranges from 57° in September to 66° in March, there being very little difference between night and day; the lowest temperature in winter is 51°, and the total rainfall (1920) 35.24 inches. St. Helena was discovered by the Portuguese navigator, Juan de Nova Castella, on May 21, 1502 (St. Helena's Day), and remained unknown to other European nations until 1582. It remained uninhabited until the Dutch colonised it *circa* 1645. The English East India Company seized it in 1651; but it was retaken by the Dutch in 1672. In 1673 it was again taken from the Dutch and was held by the Company, who had obtained a charter for its possession from Charles II., until 1824 (with the exception of the period 1815 to 1821, during which the British Government held it as a residence for the Emperor Napoleon, who died there May 5, 1821), when it was ceded by them to the Crown. It was formerly an important station on the route to India, but its prosperity received a fatal blow by the cutting of the Suez Canal, and it is now frequented only by a few sailing ships homeward bound from the East Indies. A phormium (flax fibre) and lace-making industry have been established under Government control. St. James's Bay, on the north-west of the island, possesses a good anchorage.

The government is administered by a Governor, with the aid of an Executive Council of 4 members, the Governor alone making all ordinances.

Sarawak is a state on the north-west coast of the island of Borneo, with a seaboard of 400 miles, an area of about 45,000 square miles, and a population of about 600,000, composed of various races. The territory of the Raja of Sarawak extends from Cape Datu in the south to the Lawas District, where it touches the boundary of British North Borneo. The southern boundary is formed by three ranges, the Serang, Kelingang, and Batang-Lupar mountains; the eastern boundary is a broken range of mountains with peaks rising to 10,000 feet. The principal rivers are the Rejang (navigable for about 160 miles), the Baram (navigable for about 100 miles), the Batang-Lupar, and the Limbang. Kuching, the capital, stands on a small river (the Sarawak) which is navigable from its mouth to Kuching (20 miles). The government consists of a hereditary sovereign and a Supreme Council of 9 (4 Europeans and 5 Malay magistrates), and a General Council of 50, composed of European and Malay officials and native chiefs, meeting every 3 years. The civil service is composed of English officials to the number of 30, appointed by the sovereign. The government of Sarawak was obtained in 1842 from the Sultan of Borneo by the late Sir James Brooke, who became well known as Rajah Brooke of Sarawak. Other concessions have been made in 1865, 1882, 1884, and 1890, when the Limbang River was obtained. The Lawas River was added in 1904. The country produces sago, gutta-percha, india-rubber, beeswax, birds'-nests, oil, gold, silver, diamonds, antimony, quicksilver, tobacco, rice, rattans, coal, gambier, and pepper. A large petroleum field has been discovered in the Baram district, and is now a valuable asset. Gold exports, (1913) \$1,077,400; (1915) \$1,256,500; (1916) \$1,209,050; (1917) \$675,600; (1918) \$283,100. Oil exports, (1917) 93,000 tons; (1918) 74,400 tons.

	1918.	1919.	1920.

CHIEF TOWN, Kuching. Population (1911), 30,000. Distance from London, 8,700 miles; transit, 25 to 30 days. Kuching, Sadong, Sibul, and Miri are in wireless communication with Singapore. Steamer leaves Singapore for Kuching and Kuching for Singapore every Tuesday in normal times, a temporary service being now maintained 3 times a month. There is also direct communication with Sibul and Miri.

SEYCHELLES.

The Seychelles Islands, in the Indian Ocean, which number altogether 90, were occupied by the French about 1742, captured by a British ship in

1794, and were finally assigned to Great Britain in 1814. By letters patent of Sept. 1903 they were erected into a separate colony. The principal islands of the group are Mahé, Praslin, Silhouette, Curieuse, and La Digue, and the total area of the islands, with dependencies, is estimated at 148½ square miles, of which Mahé occupies nearly 96 square miles. The population of all the islands (Census 1921) was 24,593 (Mahé 19,428, Praslin 1,999, La Digue 1,302, other islands 1,765), an increase since the Census of 1911 of 1,832. Victoria, the capital, on the N.E. side of Mahé, has an excellent harbour; it is an Admiralty coaling station, and depot for patent fuel. Although only 4° S. of the Equator, the islands are very healthy, the death-rate in 1920 being 14·72 per 1,000. There are 19 Roman Catholic and Church of England primary schools; there are also 2 secondary schools.

The principal exports are copra, vanilla, coco-nuts, coco-nut oil, tortoise-shell, cinnamon, essential oils, soap, and guano. Aldabra, one of the dependencies of the Seychelles, and about 680 miles from Mahé, is famous for the gigantic land tortoises, whilst the unique double coco-nut, *Coco de Mer*, is found in Mahé, and, in larger quantities, in Praslin, where there is a famous valley. The Governor is assisted by an Executive Council of 3 members (2 *ex-officio* and 1 nominated), and by a Legislative Council of 3 official and 3 unofficial members.

SIERRA LEONE.

The peninsula of Sierra Leone, situated on the West Coast of Africa, was ceded to Great Britain in 1787 by the native chiefs for the purpose of being used as an asylum for the many destitute negroes then in England. At a somewhat later date the Colony was used as a settlement for

Africans from North America and the West Indies, and great numbers of Africans rescued from slave ships have from time to time been liberated and settled there. The Colony has a coast-line of 220 miles, with an estimated area of 4,000 square miles. In 1911 its population was 75,572, of whom 650 were resident Europeans. Of the rest, more than half are the descendants of liberated Africans, while the remainder belong to the neighbouring tribes. A babel of tongues is thus to be heard in the streets of Freetown. In 1896 a Protectorate was declared over the territory adjoining the Colony to the northward and eastward. The extreme depth of the Protectorate from north to south is about 220 miles, lying between 7° and 10° N. lat., and the extreme breadth from east to west is 180 miles, between 10° 40' and 13° 21' of W. long. Its estimated area is 27,000 sq. miles, and its population about 1,327,560. For administrative purposes it is divided into 3 Provinces, under Provincial Commissioners, assisted by 10 District (and 14 Assistant District) Commissioners. The principal peoples are the Limbas and Korankos in the north, the Temnes in the centre, and the Mandis in the south.

The principal exports are palm kernels, kola nuts, and palm oil; but ginger, piasava, hides, and rice are also exported. The value of the palm kernels exported in 1900 reached £1,401,676. The chief imports are cotton goods, coal, apparel, hardware, provisions, and tobacco. Freetown, the capital, possesses the finest and most important harbour in West Africa.

A railway runs inland from Freetown to Pendembu, a distance of 227½ miles, and a branch line 104 miles in length extends in a north-easterly direction from Bala to Kamabai. By the extension of the railway and the development of a system of roads in the Protectorate, it is estimated that the output of Sierra Leone products into the European market is capable of being more than doubled. There are 827 miles of combined telegraph and telephone service.

Sierra Leone is a Crown Colony, possessing a Legislative Council nominated by the Crown, and having full power to legislate for the Protectorate as well as for the Colony. The Governor is advised by an Executive Council.

SOMALILAND.

(The Somaliland Protectorate.)

In 1884 a Protectorate was declared over part of Somaliland, a region where the coast is divided between Great Britain, France and Italy, while the interior is subject to Abyssinia, and forming the north-eastern horn of the African continent. The British Protectorate contains about 68,000 sq. miles. The population, mainly consisting of Somalis, a Muhammadan people, is estimated at 300,000. The boundaries are defined by treaties with Abyssinia, France and Italy; the northern coast as far as 49° E. and the 8th parallel of N. latitude are the limits on the north and south. The Protectorate garrison is now confined to a Camel Corps, 400 strong, the Dervish power having been finally broken in 1900. The chief products of Somaliland are cattle, sheep, goats, hides, skins and gum. There is wireless communication with Aden. The Protectorate was transferred to the administration of the Colonial Office on April 1, 1905.

Resident Commissioner, Southern and Northern Rhodesia, C. D. Douglas-Jones, C.M.G.	1,800
Private Secretary, (vacant)	
The High Commission.—The office of High Commissioner, which was formerly combined	

* Inclusive of allowances.

with the Governorship of Cape Colony, was by a Commission issued in 1900 vested in Lord Milner; by a similar Commission issued in 1905 in Lord Selborne; since 1906 it has been vested by a separate commission in the successive holders of the office of Governor-General of the Union of South Africa. The High Commissioner is Governor of Basutoland, and supervises the affairs of the Bechuanaland Protectorate and of Swaziland, and he exercises the control provided by Order in Council over the Administration of the British South Africa Company in Southern and Northern Rhodesia. The Southern Rhodesia Order in Council, 1898, and the Northern Rhodesia Order in Council, 1911, provide respectively for a control by the High Commissioner over legislation, important appointments, and Native Affairs in Southern and Northern Rhodesia, and for the appointment of a Resident Commissioner, who is paid from Imperial funds and acts as the local representative of the High Commissioner and the Imperial Government.

BASUTOLAND.

(The Territory of Basutoland.)

Basutoland is an inland Native Territory of South Africa, bounded North and West by Orange Free State, East by Natal, and South by Cape Colony, with an area of 11,716 square miles. The Census of 1911 showed 497,696 natives and 1,615 whites, 1,078 coloured and 155 Asiatics.

The territory is well watered, and enjoys a good climate. It is one of the finest grain producing districts in South Africa, and the abundant grass enables the Basuto to rear immense herds of cattle. The Maluti Mountains, forming a part of the great Drakensberg chain, occupy most of the country, which is elevated, broken, and rugged.

The territory is governed by a Resident Commissioner under the direction of the High Commissioner for South Africa, the latter possessing the legislative authority which is exercised by proclamation. The chiefs adjudicate on cases between natives, with a right of appeal to the magistrates' courts, where all cases between Europeans and natives are brought. The revenue is derived from Customs, native tax, Post-office, and licences. Telegraph offices have been opened at Leribe, Maseru, Teyateyaneng, Morija, Mafeteng, Mphahle's Hoek, Quthing, and Qacha's Nek. There are 417 native schools, with over 32,500 native scholars on the roll, a large proportion being in the schools of the French Protestant Mission; there are also 7 white schools, with 133 pupils. The amount spent on education in 1920-21 was £26,745. The chief articles of export are grain, wool, cattle, and horses, the imports being chiefly blankets, hardware, and groceries.

BECHUANALAND.

(The Bechuanaland Protectorate.)

The Bechuanaland Protectorate is a country of British South Africa, in the centre of the vast tableland stretching north to the Zambezi.

The Protectorate is bounded on the south and east by the Cape and Transvaal Provinces of the Union, on the north and north-east by Rhodesia, Southern Rhodesia, the Zambesi and Chobe (Linyanti) Rivers, and on the west by South-West Africa. It is about 400 miles long and 450 miles broad, with a total area of about 275,000 square miles. The population at the Census of May 7, 1911, was 125,350, of whom 1,692 were whites.

The climate is healthy during part of the year, but malarial fever is prevalent during February, March, and April. The country is essentially pastoral, although Kaffir corn, mealies, beans, pumpkins and melons are sown, and when the rainfall is adequate crops are reaped. Cattle thrive, and numbered 323,911 at the Census of 1911. Much of the country is thick bush. The High Commissioner for South Africa has the power of making laws by proclamation for the Protectorate, where he is represented by a Resident Commissioner. The population is almost entirely a native one, the principal tribes being those of Khama (Bamangwato), of Linchwe (Bakgatla), of Sebele II. (Bakwena), of Tshosa (Bangwaketsi), of Seboko Mokgosi (Bamaletse), and of Mathibe (Batawana).

The railway from Kimberley to Vryburg and Mafeking traverses the Protectorate on its way to Rhodesia. There is a telegraph line from Cape Province through from Mafeking, via Gaborone and Francistown, to Bulawayo and Salisbury. The chief European centres are Lobatse, Gaborone, Francistown, and Serowe, whither the Chief (Khama) and all his people moved a few years ago from Palapye. The headquarters of the Protectorate Administration are at Mafeking, Cape Province.

Commandant General Rhodesian Forces, Maj.-Gen. Sir A. H. M. Edwards, K.B.E., C.B., M.V.O.

AREA AND POPULATION.

	Sq. m.	Pop.
Southern Rhodesia (Salisbury)	149,000	822,461
Northern Rhodesia (Livingstone)	291,000	983,539

The total area of Rhodesia is about 440,000 square miles, the total population being estimated at 1,866,000 in 1921. The territory is named after Cecil Rhodes, the founder of the British South Africa Company, and extends from Lake Tanganyika and the Congo watershed in the north, to the Limpopo River in the south.

COMMUNICATIONS.

Railways.—The main arteries of communication are the Rhodesia and the Mashonaland Railways. The former is a continuation of the line from Cape Town to Vryburg, *via* Kimberley, and was opened to Bulawayo in November, 1907, the distance from Cape Town being 1,362 miles. A line connecting Bulawayo with Salisbury (301 miles) was completed in Oct. 1902. From Salisbury the Mashonaland Railway runs eastwards to Umtali and is continued by the Beira Railway Companies to the port of Beira (Portuguese), a total distance of 374 miles. The section from Bulawayo *via* the Wankie coalfields to the Victoria Falls (282 miles) was completed in June, 1904. The line crosses the Zambesi at the Victoria Falls, traverses Northern Rhodesia, and, crossing the border (507 miles), extends a further 450 miles *via* Kambove to Bukama, in the Belgian Congo State. A branch line of standard gauge (3 ft. 6 in.) runs from Salisbury to the Eldorado mine (78 miles), and

has been extended to Sinoia (4 miles). A standard-gauge line leaves the Eldorado branch at Mt. Hampden Junction (13 miles from Salisbury) for the Shamva mines (72 miles). A line connects Gwelo with Selukwe (24 miles); another runs from Bulawayo *via* Gwanda to West Nicholson (124 miles), opening up the mining district to the south-east; another connects Bulawayo with the Matopo Hills, where the founder of Rhodesia and Sir Starr Jameson are buried, and a branch line from Gwelo to Umtuma has been extended to Fort Victoria (123 miles).

Telegraphs.—The African Transcontinental Telegraph Line ("Cape to Cairo") has been constructed as far as Ujiji in East Africa, about 3,250 miles from the Cape.

SOUTHERN RHODESIA.

Area and Population.—The total area is 149,000 square miles, and the population (1921) 822,461, of whom 33,621 are Europeans. The native population is estimated at 845,993, with 3,227 Asiatics and other coloured persons, including those of mixed race.

Constitution.—Southern Rhodesia is administered by the Company under the Charter of 1893, amplified from time to time by Orders in Council. The Administrator is advised by an Executive Council consisting of the Resident Commissioner and not less than three members, appointed by the Company with the approval of the Secretary of State for the Colonies. There is a Legislative Council consisting of the Administrator, the Resident Commissioner (*ex officio*), and 19 members, of whom six are nominated by the Company with approval of Secretary of State, and 13 are elected by the registered voters. A Supplemental Charter was issued on March 13, 1915, giving effect to the arrangement to which the Directors of the Company had agreed to render possible the establishment of Responsible Government in Southern Rhodesia, should the Legislative Council desire it, and should H.M. Government concur at some date other than that the Charter permits.

The laws in force in the Cape Colony up to June 30, 1891, were adopted for Southern Rhodesia, so far as they are applicable. Subsequent legislation has been by proclamation of the High Commissioner and by ordinances passed by the Legislative Council. Municipal self-government has been established in Salisbury, Bulawayo, Gwelo, Umtali, and Gatooma.

Industrial Progress.—Southern Rhodesia is rich in mineral deposits, and it abounds in traces of the ancient gold-workers. Though the climate is sub-tropical, the average altitude makes it well suited for European occupation, and for the cultivation of European fruit-trees, cereals, and vegetables, in addition to tobacco and the indigenous products of the country. The local breeds of cattle are constantly restocked by importation of pedigree stock.

The first regular crushing returns began in September, 1896, and the gold produced to December 31, 1900, was of the value of £62,264,320. The output for the year ended December 31, 1900, was valued at £2,056,540. Silver, copper, coal, diamonds, lead, chrome iron, asbestos, and other minerals have also been produced in considerable quantities.

Administrative revenue, 1900-01	£1,366,380
Administrative expenditure, 1900-01	1,127,434
Imports, 1900	5,086,300
Exports, 1900	5,791,898

Imports from U.K., 1900 £2,492,579
Exports to U.K., 1900 3,125,197

SALISBURY, the seat of government, is situated on the Mashonaland plateau, 4,880 ft. above sea-level (white population, census, 1901, 5,134). **BULAWAYO**, the largest town in Matabeleland, 4,460 ft. above the sea-level, had a white population of 6,335.

NORTHERN RHODESIA.

This territory, a large portion of which was first opened to British influence by David Livingstone, is partly occupied by the native tribes living under their own chiefs, but large tracts are being opened up for European settlement. Over 1,000,000 acres of land are under settlement by white farmers, whose operations are chiefly stock-raising; over 56,000 head of cattle are being grazed by them. Extensive mineral deposits, copper in particular, have been discovered. Indigenous rubber is found in large areas. The country is well timbered, and well watered by the Zambesi and Kafue rivers and their affluents. There are large herds of native cattle (325,175 in 1900). Game is also abundant.

The total area is about 291,000 sq. miles, and the population was estimated in 1900 at 941,335, of whom 2,932 are Europeans.

Administrative revenue, 1900 £165,473
Administrative expenditure, 1900 260,100

SWAZILAND.

(The Swaziland Protectorate.)

Swaziland (called by the natives Kwa Ngunwe) lies between the Drakensberg and Lebombo Mountains in British South Africa. The Transvaal Province forms a boundary on the south, west and north, the eastern boundary being Zululand (Province of Natal) and the Portuguese province of Mozambique (Delagoa Bay). By the Convention of 1894, Swaziland was placed under the administration of, but not incorporated with, the South African Republic; the British Government now controls the Territory. The total area is 6,678 square miles, and the estimated population 111,700, of whom 1,700 are whites, the remainder being Ama-Swazi Bantus (or Swazis). Swaziland is divisible into three longitudinal regions: the mountainous regions of the west, with an approximate altitude exceeding 4,000 feet; the Middle Veld, about 2,000 feet lower; and the Low Veld, bounded on the east by the Lebombo Mountains, with an average altitude not exceeding 1,000 feet. Except in the Low Veld the country is well watered and healthy.

A Special Court having the full jurisdiction of a Supreme Court, and Courts of Assistant Commissioners having a restricted jurisdiction, have been established. Native chiefs continue to exercise jurisdiction according to native law and custom in civil disputes between natives, subject to a final appeal to the Resident Commissioner. The Paramount Chief, Sobhuza, son of the late Paramount Chief Bunu, is about 25 years of age, and the regency is in the hands of his grandmother, Labotsihani, widow of Mbandeni.

The numerous mineral and land concessions and monopolies granted by Mbandeni, of which many of the latter carried exemption from Customs dues or invested private individuals with powers properly exercisable by the Crown, rendered satisfactory government difficult. A Commission was therefore appointed under proclamation to inquire into these concessions

and monopolies, and those conferring exclusive rights have been expropriated, compensation being made out of loans raised for the purpose. The Commission also determined the validity and extent of all concessions, and the agricultural and grazing rights of the natives have been fully safeguarded. A general survey of the country took place in connexion with the work of the Concessions Commission and the Special Commissioner.

The soil is generally fertile, particularly so in the Low and Middle Veld. The whole of the Territory forms excellent grazing for cattle, and cattle-ranching on a large scale has been commenced by several companies. There were about 300,000 head of cattle in the Territory at the end of March, 1901.

In the winter season between 250,000 and 300,000 sheep are brought to Swaziland for grazing from the high table-lands of the Eastern Transvaal. The agricultural products are tobacco, maize (the staple product), millet, pumpkins, ground-nuts, beans, and sweet potatoes, grown in insufficient quantities to meet local requirements. Most of the sub-tropical fruits can be grown with success. Large areas of land are suitable for growing cotton, coffee, and tea. The country possesses considerable mineral wealth, including gold, tin, coal, and copper. During the year ended March 31, 1901, 407 tons of cassiterite tin, valued at £45,258, were exported. A few gold mines were being worked on a small scale, but these have had to close temporarily owing to the war.

Mbabane, the headquarters of the Administration, is situated on the hills at an altitude of 4,000 feet. At each of the district headquarters—Hlatikulu, Stegi, and Pigg's Peak—there is a small number of Europeans in the vicinity of the station, likewise at Bremersdorp, the old headquarters of the Territory. There are eleven schools for Europeans at various centres; and the Government has established a school for natives at Zombode, the kraal of the Regent, at which, until recently, the young Paramount Chief (Sobhuza) attended. There is also a school for coloured children. Grants are also made to the various native missions for educational purposes.

There is a tri-weekly communication by motor-car between Mbabane and Carolina (22 miles) and between Mbabane and Bremersdorp (23 miles). Elsewhere the communication is by cart or runners. There are 14 post offices, and a telegraph office at Mbabane, Pigg's Peak, Bremersdorp, and Ezulweni.

	1910-11.	1909-10.	1908-09.
Revenue	£73,342	£91,801	£88,372
Expenditure	82,004	87,097	111,139

CAPITAL, Mbabane.

Resident Commissioner, De S. M. G. Honey, C.M.G.
Deputy Resident Commissioner and Government Secretary, B. Nicholson, D.S.O., M.C.

STRAITS SETTLEMENTS.

The whole of the Malay Peninsula, from the southern boundary of Siam to the Strait of Singapore, is within the British sphere, the administrative groups being the *Straits Settlements* (Singapore, Penang, Malacca, Labuan, Cocos Islands, and Christmas Island), the *Federated Malay States* (Perak, Selangor, Negri Sembilan, and Pahang), the *Federated Malay States* (Kelantan, Trengganu, Kedah, Perlis or Palat, and Brunei), and the *Protected State of Johore*.

The Settlements forming what is known as the Colony of the Straits Settlements consist of the island of Singapore (with its dependencies), Penang (including Province Wellesley and the Dindings), Malacca, the Cocos or Keeling Islands, Christmas Island, and Labuan. These Settlements have an entire area of about 1,600 square miles, with a population (1921) of 807,769.

The Government consists of a Governor, assisted by an Executive Council of 7 members, and a Legislative Council of 10 official and 7 unofficial members, appointed by the Crown. Two of the unofficial members are nominated by the Chambers of Commerce at Singapore and Penang respectively. The Resident Councillor of Penang has a seat in both Councils. The law of the colony is the common and statute law of England as it was in 1826, qualified by Indian Acts until 1867 and since then by local ordinances. The Supreme Court consists of the Chief Justice and four puisne judges, and constitutes also a court of appeal, from which there is yet another appeal in certain cases, viz. to the Privy Council. The jurisdiction of the Supreme Court includes that of a Colonial Court of Admiralty. There are also in each Settlement district courts with limited civil and criminal jurisdiction, and the usual police magistrates' and coroners' courts.

The climate of the colony is almost uniform throughout the year, and foliage is perennial. The rainfall in 1924 amounted in Singapore to 84.24 inches, in Penang to 89.54 inches, and in Malacca to 84.27 inches.

The railway from Singapore to Bangkok was opened for passenger traffic in July, 1928.

The exports comprise—gutta-percha, gambier, pepper, india-rubber, horns, hides, canes, para rubber, shells, sago, tapioca, spices, dye-stuffs (cutch), copra, rattans, coffee, gums, tin, preserved pineapples, &c. The rubber exports amounted to 62,376 tons in 1928, 145,960 tons in 1929 and 128,255 tons in 1930.

The chief imports are rice, sugar, cotton piece goods, opium, petroleum, and coal.

SINGAPORE is an island situated off the southern extremity of the Malay Peninsula, from which it is separated by a narrow strait about three-quarters of a mile in width; its length is about 27 miles, and its breadth 14 miles; it comprises, with the adjoining islets, an area of 27 square miles, and a population (1921) of 426,328. It was first occupied, in 1819, and formally ceded to the British Government by the Sultan of Johore in 1824. The seat of government for all the settlements is the town of Singapore, situated on the south side of the island in lat. 1° 16' N. and long. 103° 53' E., with 320,325 inhabitants in 1921. The climate is fairly healthy for Europeans, except for the absence of any marked change of temperature throughout the year. The railway from Singapore to Bangkok was open for passenger traffic on July 1, 1928.

The number of merchant vessels entered and cleared in 1920, exclusive of native craft, was 11,536, with a tonnage of 17,000,812. The total for the whole colony was 17,422, with a tonnage of 24,007,912. The total native craft entered and cleared at all four ports, Singapore, Penang, Malacca, Labuan, during the same year was 62,395 (tonnage, 2,576,161). The harbour, in the extent of its shipping, is one of the greatest ports in the world, being a port of call for vessels trading between Europe or India and the Far East, the North of Australia, and Netherlands Indies, and is strongly defended. The Tanjong Pagar docks and wharves were taken over by Government in 1905 at a cost (fixed by arbitration) of \$29,000,000. The King's Dock (opened in 1913) is the largest east of Suez, being 879 feet long, 200 feet wide, and 34 feet deep; its cost was \$2,300,000.

Singapore is a free port; no duties are levied upon anything except opium, tobacco, spirits, wines, beer, and petroleum consumed in the colony. The trade returns aggregate for 1920 (including inter-settlement trade), amounted to \$1,921,606,869 (including the value of bullion and specie), the value of exported tin being \$70,490,787.

Labuan is an island of the Malayan Archipelago, situated about 6 miles off the north-west coast of Borneo, in 5° 28' N. lat. and 103° 15' E. long., and forms part of the Settlement of Singapore. Its area is about 28 square miles; and its population is 5,908. It was ceded to Great Britain by the Sultan of Brunei in 1846, being at that time uninhabited. The island has a fine harbour. The exports consist of coal, cloth, rice, sago, earthenware, brassware, &c. Victoria Harbour, in the south-east, is the principal inlet, and affords good anchorage. There is a cable station of the Eastern Extension Telegraph Company on the island. Imports (1920), \$2,428,866; exports, \$2,321,822.

Resident, H. S. Eley (actg.).

† Exclusive of bullion and specie

† 25 per cent. S.S. Inscribed Stock.

† 25 per cent. S.S. War Loan Bonds of 46,327,600 dollars

and 8 per cent. do. 25,000,000 dollars.

† Inclusive of bullion and specie for second half year.

The Cocos-Keeling Islands are a group of about 20 small islands about 700 miles south-west of Sumatra, and form part of the Settlement of Singapore. The population is 862, and the island exports about 800 tons of copra. There is a station of the Eastern Extension Telegraph Company on Direction Island.

CHRISTMAS ISLAND, in the Indian Ocean, about 200 miles south-west of Java, and 700 miles east of the Cocos-Keeling Islands, has an area of about 56 square miles and a population of 783. A District Officer is stationed on the island, which contains enormous phosphate deposits worked by the Christmas Island Phosphate Company. The amount exported in 1920 was 69,375 tons.

PENANG is the northernmost of the Settlements. It includes Penang or Prince of Wales's Island (population, 1921, 162,144), on the eastern side of which is Georgetown, the port and capital, and the strip of mainland opposite, known as Province Wellesley (population 1921, 130,341), and the Dindings. Penang Island, about 15 miles long and 9 broad, is situated off the west coast of the Malay Peninsula, in lat. 5° 18' N., long. 100° 21' E., and was ceded to the Government of India in 1786 by the Raja of the neighbouring territory, Kedah. Area, 108 square miles. At the time it was founded, Penang was the only British settlement in further India; now it is the emporium for all the trade of the northern and more prosperous parts of Sumatra and the Malay Peninsula. Its aggregate trade for 1920 (including inter-settlement trade) amounted to \$599,180,937; the export of tin from the port being \$58,928,165 in 1920.

Province Wellesley is a strip of coast about 45 miles in length with an area of 288 square miles, ceded by the Raja of Kedah in 1786, with some land S. of the Krian River acquired more recently. The province is in a high state of cultivation as compared with the neighbouring territory, containing rice, spices, tapioca, and rubber plantations.

The Dindings Territory (area 183 square miles, population in 1921, 11,850) is at present little developed; but it contains what is considered the best natural port on the western side of the peninsula. The headquarters are at Lumut, where a District Officer is stationed, and steamers call regularly at Pangkor and Lumut. The territory comprises a group of islands (of which Pangkor is the largest); and a strip of the mainland on the west coast of the peninsula, cut out of the State of Perak, and measuring about 22 miles long by about 10 miles in width.

MALACCA, the largest of the Settlements, situated on the western coast of the peninsula, between Singapore and Penang, and about 120 miles to the N. W. of Singapore, comprises an area of about 720 square miles. It is one of the oldest European settlements in the East, having been taken possession of by the Portuguese in 1511, and held by them till 1640, when the Dutch drove them out. In 1795 it was captured by the British, and retained till 1824, when it was restored to the Dutch; it finally became a British possession, in pursuance of the treaty with Holland, March 17, 1824, being exchanged for the British settlements in Sumatra. The population in 1921 was 153,222.

Aggregate trade, 1920.....\$79,241,394
(including para rubber, \$42,225,251, exported in 1920.)

Singapore, distant 2,700 miles; transit, 22 days.
Penang, 22 days; and Malacca, 23 days.

TANGANYIKA TERRITORY.

TANGANYIKA TERRITORY, formerly "German East Africa," was attacked by British and South African forces and conquered in 1918, the German forces surrendering near Abercorn in North-east Rhodesia on Nov. 23, 1918. Civil Administration was established *part passu* with the conquest of the territory, and the whole Colony passed under the effective control of the present Administration at the beginning of 1919.

Tanganyika Territory has a coast-line of about 600 miles and an estimated area of 384,120 square miles. The Sultan of Zanzibar's rights over the narrow strip of coast territory were acquired by Germany in 1890 for a payment of 4,000,000 marks. The coast-line extends from the mouth of the Umba to the mouth of the Rovuma River.

The native population consists mostly of tribes of mixed Bantu race, and was enumerated for the whole area (Jan. 1, 1913) at 7,659,898, the coloured population (other than native) being 14,898. The thickly populated provinces of *Ruanda* and *Urundi* are now under Belgian administration, so that the native population of Tanganyika Territory is about 4,000,000. The total white population is 2,447. According to German law every native born after 1905 is free, but a mild serfdom was continued under German rule.

Education is not compulsory. In 1921 there were 45 Government schools, with 71 native teachers and 3,500 pupils. Protestant and Roman Catholic missionary societies are working in the Territory.

The total area under forests is about 2,700,000 acres, of which about 2,170,000 are included in the Government Forest Reserves. There are a number of plantations of coco-palms, coffee (on the higher lands), caoutchouc, sugar, cotton, cardamum and cinchona, while fibre plants (especially sisal) are successfully cultivated. In 1921 there were 43,617 cattle, 41,647 sheep and goats in the possession of Europeans, and 3,950,250 cattle and 6,398,300 sheep and goats in the possession of natives. Minerals known to exist within the Protectorate are coal, iron, lead, copper, mica, and salt. Agates, topaz, niobstones, tourmalin, and quartz crystals are found, and garnets in large quantities.

The revenue of Tanganyika Territory estimates for 1920-21 was £1,262,844 (including a grant in aid of £316,000) and the expenditure £1,359,384. The imports in 1919-20 were valued at £1,159,000, and in 1920-21 at £1,728,714; the exports were valued at £1,426,000 in 1919-20 and at £1,222,459 in 1920-21. The chief exports in 1920-21 were: Sisal (11,064 tons, £364,448), cotton (1,147,922 lb., £119,255), hides (14,726 cwt., £66,844), skins (2,738 cwt., £29,634), copra (69,834 cwt., £103,772), coffee (23,086 cwt., £88,683), ghee (14,966 cwt., £22,127), wax (4,772 cwt., £23,583) ground-nuts (67,377 cwt., £70,136), grain (1,227,476 cwt., £153,172), sisim (17,922 cwt., £26,494), rubber (2,207 cwt., £13,771), ivory (129 cwt., £28,254); the chief imports in 1920-21 were cotton piece goods (£762,923), rice (£5,692), other foodstuffs (£193,599), kerosene (£23,789), cigarettes (£41,739), tobacco (£26,612), spirits (£28,702), wines and beer (£20,122).

The chief seaports are Dar-es-Salaam, Tanga, Bagamoyo, Pangani, Kilwa, Lindi and Mikindani, but few of these are accessible to ocean-going vessels, though gradual improvements are being introduced. There are two railway lines in the

Protectorate—the Usambara railway from Tanga to New Moshi (220 miles), commenced in 1905 and completed in Feb., 1912, and the Central railway (780 miles), from Dar-es-Salaam to Kilgoma, completed in Feb., 1914. Dar-es-Salaam is in telegraphic communication with the coast towns, Zanzibar, Mombasa, and many inland centres. There are 43 post offices and telegraph stations. Three Battalions of the King's African Rifles are stationed in Tanganyika Territory.

In 1900-01, 129 steamers (exclusive of coastal boats) of 408,632 tons and 1,925 vessels (dhows) of 40,033 tons entered the various ports from places beyond the territory.

TOGOLAND.

(Joint Franco-British Administration.)

The former German colony of Togoland was conquered by Franco-British forces during the war of 1914-18, and its administration has been entrusted to France and Great Britain jointly by the Supreme Council of the Allied Powers.

Togoland is situated on the Gulf of Guinea between the (British) Gold Coast Colony and (French) Dahomey, and is bounded on the south by the Atlantic and on the north by (French) Upper Senegal-Niger, and lies between 0° 15' W.-0° E. long. and 6°-11° N. lat. at its extreme limits, the coast line being only 28 miles in extent (1° 14'-1° 38' E. long.). The coast is fringed with lagoons, but for some 50 miles inland are undulating plains, which end in a plateau, about 1,000 feet in mean level, with Mount Agu (3,135 feet) and Mount Avaklu (3,350 feet) in the south-west. The country is watered by the Oti, which effects a confluence with the Volta at the western boundary of Togoland. The area is 33,659 English square miles, with a population of about 1,000,000. The Christian element is small. Coffee, cocoa, cotton, maize, kola and other

tropical products are abundantly cultivated; palm oil, palm kernels, rubber, cotton, maize, ground nuts, vegetable butter, fibre, indigo, kola nuts, ebony, and other forest products are exported (exports, 1919, £850,744). The imports (valued at £665,322 in 1919) are textiles, metals, hardware and spirits. The revenue exceeds the expenditure, and the colony is in a very flourishing condition. About 220 miles of railway are open, lines running from the capital to Aneho and to Misahohe and Atakpame.

In 1900 the whole territory was divided into a British Sphere and a French Sphere.

The British Sphere consists of an area of about 10,200 sq. miles with an estimated population of 200,000. No portion of the coast is included in the British area. The sphere is administered by the Government of the Gold Coast.

TRINIDAD and TOBAGO.

TRINIDAD is the most southerly of the West India Islands. It is close to the north coast of the continent of S. America, the nearest point of Venezuela being 7 miles distant. It lies between 10° 3'-10° 50' N. lat. and 60° 55'-61° 56' W. long., and is about 65 miles in length by 54 in breadth, with an area of 1,864 square miles (517,538 acres cultivated), and a population at the Census of 1911 of 332,552 (including Tobago). The estimated population on Dec. 31, 1920 was 391,279. The island was discovered by Columbus in 1498, was colonised in 1598 by the Spaniards, and capitulated to the British under Abercromby in 1797. The chief town and port of entry, Port of Spain (pop. 70,146), is one of the finest towns in the West Indies, with sewerage, electric lighting, tram and telephone services. Other towns of importance are San Fernando (pop. 10,167), about 30 miles south of the capital; Princetown (pop. 4,564), and Arima (pop. 4,032). A remarkable phenomenon is the asphalt lake near the village of La Brea, 120 acres in extent, containing an apparently inexhaustible supply; in 1920, 113,697 tons (£65,540) were exported. The soil is rich and productive, the most important products being sugar, cocoa, mineral oil, molasses, rum, copra, limes, and coco-nuts, and various kinds of timber and fruits. The chief exports (1920) were cocoa £3,536,830; sugar £2,656,625; petroleum (1919) £843,384; and coconuts £308,660. Coal is found in Manzanilla, and is indicated in other parts of the island. The petroleum industry has made considerable advance, boring operations being carried on by as different companies. There are 124 miles of railway open, electric lighting and tramway service, and waterworks and sewage operations have been established. The island is crossed by the telegraph wire of the West India and Panama Company, by Government telegraph and private telephone wires. There is also wireless telegraphic communication between Trinidad and Tobago and between Trinidad and Demerara, Curaçao, Martinique, St. Thomas, &c. The Government is vested in a Governor, an Executive Council, and a Legislative Council, all of whom are nominated by the Crown.

	1918.	1919.	1920.

Exports	5,149,979	7,256,394	9,416,546

Tobago was annexed in 1889 to the Government of Trinidad, and on Jan. 1, 1890, it was constituted a ward of that island. It is between 11° 9' N. lat. and 6° 43' W. long., about 75 miles south-east of Grenada, 18 miles north-east of Trinidad, and 120 miles S.S.W. of Barbados; is 26 miles long, and from 6 to 7½ broad, and has an area of 114 square miles, with a population (Census 1911) of 24,063. It is one of the most healthy of the West Indies; the temperature varies from 81° to 88°. There are two towns in the island, viz., Scarborough (pop. 740) and Plymouth (pop. 575).

Governor, His Excellency Col. Samuel H. Wilson, C.B., C.M.G., R.E. (1911)..... £5,000

CAPITAL, Port of Spain (pop. 69,796); transit, 14 days to U.K.; 8 days to U.S.A.

TRISTAN DA CUNHA

is the chief of a group of islands of volcanic origin lying in lat. 37° 6' S. and long. 12° 2' W., discovered in 1506 by a Portuguese admiral (Tristão da Cunha), after whom they are named. The population numbers 129, and the inhabitants are said to be very long-lived. The principal settlement (Edinburgh) is in the north-west of the island. In spite of periods of distress the inhabitants refuse to leave the island for the Cape of Good Hope, to which they are attracted by offers of land.

INACCESSIBLE ISLAND is a lofty mass of rock with sides a miles in length; the island is the resort of penguins and sea-tow.

THE NIGHTINGALE ISLANDS are three in number, of which the largest is 1 mile long and ½ m. wide, and rises in two peaks, 960 and 1,205 ft. above the sea-level respectively. The smaller islands, Stollenhoff and Middle Isle, are little more than huge rocks. Numbers of seals and sea-elephants visit these islands.

GOUGH ISLAND (or Diego Alvarez), in 40° 20' S. and 9° 44' W., lies about 250 miles S.S.E. of Tristan da Cunha. The island is about 8 miles long and 4 miles broad, with a total area of 40 square miles, and has been a British possession since 1816. The island is the resort of penguins and has valuable guano deposits. There is no permanent population.

TURKS AND CAICOS ISLANDS.

These West India islands geographically form a sort of annexe of the Bahama group, from which Government they were separated in 1848. In 1873 they were annexed to Jamaica, from the north-west of which they are distant about 420 miles. They have an area of about 170 square miles. The population in 1911 was 5,615, of which the principal island, Grand Turk, contains 1,681. Salt is the principal industry of the islands, and Sisal hemp and sponges are exported.

A Commissioner administers the government of the Dependency, assisted by a Legislative Board. This Board has control of local finance, and passes local ordinances, subject to the assent of the Governor of Jamaica, who is also the medium of communication between the Commissioner and the Colonial Office. The Legislature of Jamaica has the power to pass laws applying to the Turks and Caicos Islands, and the jurisdiction of the Supreme Court of Jamaica extends to the Islands in matters of divorce and matrimonial causes, and is also a Court of Appeal.

UGANDA.

(The Uganda Protectorate.)

The territories now comprised within this Protectorate came under British influence in 1890, and a portion of them was for a time administered by the Imperial British East Africa Company. In 1894 a British Protectorate was declared over the kingdom of Uganda and some of the adjoining territories. The present limits are approximately as follows:—On the north the Uganda-Sudan boundary; on the east, a line drawn down the middle of Lake Rudolf, and along the west boundary of the Colony of Kenya and the eastern shores of Lake Victoria; on the south, by Tanganyika Territory (late German East Africa); and on the west, by the eastern boundary of the Belgian Congo. Within these boundaries lie part of the Victoria Nyanza, part of Lake Edward, the whole of Lake George,

half of Lake Albert, the whole of Lake Kioga, the whole of Lake Salisbury, part of Lake Rudolf, and the course of the Nile from its exit from Lake Victoria to Nimule, where the Egyptian Sudan commences. Total area, 110,300 square miles, including 16,377 square miles of water.

For administrative purposes, the Protectorate is divided into 5 Provinces:—

(1) *Eastern Province*, comprising the districts of Busoga, Bukedi, Teso, Lango, Karamoja, and Lohor.

(2) *Rudolf Province*, comprising the districts of Turkwel, Turkana, and Dabossa (the last named being, at present, under military occupation).

(3) *Northern Province*, comprising the districts of Bunyoro, Gulu, Chua, and West Nile.

(4) *Western Province*, comprising the districts of Toro, Ankole, and Kigezi.

(5) *Buganda Province* (with islands in Lake Victoria) comprising the districts of Mengo, Masaka, Mubendi, and Entebbe. Owing to sleeping sickness, the islands of Lake Victoria were entirely depopulated, and the inhabitants (about 20,000) settled on the mainland in fly-free districts. Experiments are being made with a view to repopulating these islands.

With the exception of the Rudolf Province the whole Protectorate is now under direct administration; but the native kings or chiefs, whose rights are in some cases regulated by treaties, are encouraged to conduct the government of their own subjects. The province of Buganda is recognised as a native kingdom under a *Kabaka* (H. H. Daudi Chwa, grandson of the celebrated Mutesa). He is assisted in the government by three native ministers and a *Lukiko*, or native assembly. In Buganda (and in Bunyoro, Ankole and Toro, also ruled over by native "Kings"), purely native matters are dealt with by the various *Lukikos*, but in serious cases there is an appeal to higher courts. For Europeans and non-natives justice is administered by His Majesty's Courts. The principal British representative is the Governor who (with the assistance of the Executive and Legislative Councils), makes Ordinances for the administration of justice, the raising of revenue, and other purposes. There are local and special courts of justice, and a High Court with civil and criminal jurisdiction. The Appeal Court consists of the judges of the High Courts of Kenya, Uganda, Nyassaland and Zanzibar. In 1920 there were 3,468 criminal cases tried. There is an armed constabulary force, under a British Commissioner of Police and British officers. There is also a volunteer reserve of Europeans.

In 1920 Executive and Legislative Councils were constituted, and these came into being in Jan. 1921. The former consists of 4 appointed members and the latter includes the former, with 4 unofficial members, and is presided over by the Governor.

The total population of Uganda (Census 1921) is given as 3,044,220, composed as follows: Natives, 2,037,347; Asiatics, 5,604; Europeans, 1,269 (including 386 females). Among the natives approximately 785,000 belong to the intelligent, civilised Baganda, a race converted to Christianity by British and French missionaries. Educational work is undertaken by the various Missionary Societies, who receive grants amounting to £22,000 towards scholarships, &c., for students and teachers. About 170,000 natives

speak Bantu languages; there are a few Congo pygmies living near the Semliki river; the rest of the natives belong to the Massai, Nilotic, and Sudanese groups.

In 1920 (nine months only) total exports, £4,234,226; the import figures are now merged in those of Kenya. The export trade, which is increasing, is mainly in cotton (£3,778,932), coffee, chillies, oil-seeds, rubber, ivory, and hides and skins. The trade is chiefly with Great Britain, the United States, and India.

	1918-19.	1919-20.	1920*.
Revenue	£351,834	£495,548	£777,084
Expenditure	323,691	465,117	616,151

In 1920 the poll-tax amounted to £398,338 and Customs to £161,118.

The headquarters of the British administration is at ENTebbe; the native capital of Buganda is at MENGO (Kampala). Nile steamers ply to Refaj, which is about eight days' march from Nimule, the Sudan port of the Lake Albert Marine Service. A regular steamer service is maintained by the *Uganda Railway Administration* between Kisumu, the railway terminus, and Entebbe, Port Bell, and Jinja, the principal Uganda ports on Lake Victoria. The *Busoga Railway Marine*, which, with the Busoga Railway, is controlled by the Uganda Railway, deals with the traffic on Lake Kioga. There are two steamers and a large number of lighters on that waterway. An additional steamer and subsidiary craft ply on Lake Albert and the Nile between Butiaba, Nimule and Belgian port of Kasenye at the south of Lake Albert. The *Busoga Railway*, of the same gauge as the Uganda Railway, 6 miles in length, runs from Jinja (on Lake Victoria) to Namasagali, a point on the Nile below the rapids, and deals with the cotton output in the regions round Lake Kioga, connecting that lake with Lake Victoria. There is a railway from Port Bell to Kampala, 7½ miles in length. There is a fleet of Government motor vans. The length of telegraph line in the Protectorate is (1920) 1,225 miles, with 24 telegraph offices.

Governor and Commander-in-Chief, His Excellency Sir Robert T. Coryndon, K.C.M.G. (1919)	(and £1,000 duty) £3,000

† Members of Executive Council.

WEIHAUWEI.

The territory of Weihaiwei was leased to Great Britain by China by a convention made on July 1, 1898, and lies in latitude 37° 30' N., longitude 121° 20' E. It is situated in the Chinese province of Shantung, and comprises the island of Liu Kung, all the islands in the Bay of Weihaiwei, and a belt of land 10 English miles wide along the entire coast-line, with a total area of about 285 square miles, and a population in 1911 of 147,177, in which are included 3,000 resident on the island of Liu Kung. In addition to the leased territory there is a zone which comprises that portion of the province of Shantung lying east of the meridian 121° 40'—an area of 1,500 square miles—within which Great Britain has the right to erect fortifications, station troops, or take any other measures necessary for defensive purposes. The winter is cold, but dry and bracing. The summer heat is not excessive, and the rainfall is, as a rule, small.

The government is administered by a Commissioner. Weihaiwei is a port of call for steamers running to and from the North of China, and there is regular steam communication with the ports of Shanghai, Hong Kong, Chefoo, and Tientsin.

Administrator, A. P. Blunt.

Judge of the High Court, Hiram Parkes Wilkinson.

Crown Advocate, Allan G. Mossop.

Senior District Officer and Magistrate, H. Jowett.

Junior District Officer and Magistrate, S. L. Burdett.

Senior Medical Officer, W. M. Muat, M.B.

Financial Assistant & Chief Clerk (vacant).

Inspectors of Police, A. Whittaker, F. Forcey, G. H. Jennings, A. G. Gunn.

WINDWARD ISLANDS.

The Government of the Windward Islands is made up of the three colonies of Grenada (the seat of government), St. Vincent, and St. Lucia, with their dependencies, the Grenadines being divided between Grenada and St. Vincent. The total area is 508 square miles, with an estimated population (1920) of 180,182. There is one Governor for the three islands; but there is no General Legislative Council as in the Leeward Islands, and no common tariff or treasury. Each island retains its own institutions, and in the Governor's absence is governed by an Administrator subordinate to him.

Governor and Commander-in-Chief, Sir

G. B. Haddon-Smith, K.C.M.G. £3,000

Private Secretary & A.D.C., 300

Auditor, M. J. Flanagan £440 to 550

Staff Officer (vacant) £440

Transit, about 14 days.

GRENADA

(AND THE GRENADINES).

Grenada is situated between the parallels of 12° 30'–12° 58' N. lat. and 62° 20'–62° 35' W. long., and is about 21 miles in length and 12 miles in breadth; it is about 96 miles north of Trinidad, 68 miles S.E.W. of St. Vincent, and 100 miles S.W. of Barbados. Area, about 85,120 acres; population (including some of the Grenadines), 66,302 (Census of 1921). The country is mountainous and very picturesque, and the climate is healthy. Grenada was discovered by Columbus in 1498, and named Conception. It was originally colonised by the French, and was

definitely ceded to Great Britain by the Treaty of Versailles in 1763.

The soil is very fertile, and cocoa, spices, rubber, cotton, coffee, and fruit are grown. The forests are rich in timbers. The imports chiefly comprise dry goods, bread-stuffs, hardware, &c. The Legislative Council consists of 14 members, seven of whom are officials.

St. George's, on the south-west coast, is the chief town, and possesses a good harbour.

	1918-19.	1919.	1920.
Public revenue	£110,387	£87,295	£134,128

Treasurer, E. D. Laborde, I.S.O. £600 to 720

Chief Justice, G. O'D. Walton 1,100

Attorney-General, N. J. Paterson, K.C. 800

Colonial Surgeon, G. W. Paterson 800

Magistrate, Southern District, John Stuart

Martin £450 to 500

Magistrates, T. M. Comissiong, E. Dial;

T. W. S. Garraway, W. Dist., each £440;

H. Allan Otway, District Commr. of

Carriacou £350 to 420

Postmaster, C. L. Wilson £350 to 420

Chief of Police, Maj. O. C. Heldenstain

(and quarters) £385 to 440

THE GRENADINES are a chain of small islands lying between Grenada and St. Vincent (within which Governments they are included), comprising an area of 8,462 acres. The largest island is Carriacou, attached to the Government of Grenada, pop. (1920), 7,636.

ST. LUCIA,

the largest and most picturesque of the Windward group, situated in 13° 50' N. lat. and 60° 58' W. long., at a distance of about 90 miles W.N.W. of Barbados, 21 miles N. of St. Vincent, and 21 miles S.E. of Martinique, is 24 miles in length, with an extreme breadth of 12 miles. It comprises an area of 233 square miles, with a population (1921) of 51,505. It possibly possesses the most interesting history of all the smaller islands. Fights raged hotly around it, and it constantly changed hands as between the English and the French. It is mountainous, its highest point being 3,125 feet above the sea, and for the most part it is covered with forest and tropical vegetation. The principal exports (1919) are sugar, cocoa, lime-juice, molasses and syrup, lime oil, bay oil, honey, hides, logwood and fuel. The chief places are Castries, the capital (pop. 1921, 5,899), and Soufrière (pop. 2,480).

Port Castries, one of the finest in the W.I., is a coaling depot. In 1920, 268 steamers (tonnage 585,061) entered Port Castries.

	1917-18.	1918-19.	1919.	1920.

ST. VINCENT.

an island about 95 miles west of Barbados, situate in 13° 10' N. lat. and 60° 57' W. long., is 18 miles in length and 11 in breadth, comprising an area, with its dependencies, of 150 sq. miles, and a population (Census of 1921) of 44,447. In 1846 a large number of Portuguese labourers, amounting to 2,400, entered the island, and proved a valuable acquisition. St. Vincent is more thoroughly English than the two other islands of the group, though it has been the scene of warfare. In 1783 it was secured to Great Britain.

The chief products are arrowroot, cotton, sugar, molasses, rum, cassava, cocoa, coffee, and spices. Its chief imports are linen, cotton and woollen manufactures, Canadian flour, fish, lumber, &c. Steps have been taken to settle the labouring classes on lands acquired for the purpose.

ZANZIBAR.

(The Zanzibar Protectorate.)

The Zanzibar dominions became independent in 1896 under the rule of Seyyid Majid, a son of Seyyid Said, Sultan of Muscat and Zanzibar. They formerly extended along the mainland as far south as Tughit Bay and north as Warsheikh; but since the cession of the coast-line from Ruwma to Wanga, including the island of Mafia, to Germany in 1890, and of the Benadir coast to Italy in 1904, they are now confined to the islands of Zanzibar and Pemba, a ten-mile coast-line from Wanga to Kipini, the islands of Lamu, Manda, Patta, and Siwa, together with the port of Kismayu, with a radius of 20 miles. As far as the mouth of the Juba, the Zanzibar dominions on the mainland are under the administration of H.M. Government through the Governor and Commander-in-Chief in the East Africa Protectorate (g.v.). Zanzibar has been a British Protectorate since November, 1890. On July 1, 1913, the Protectorate was transferred from the Foreign to the Colonial Office.

By a decree of Sultan Hamoud (1897) the legal status of slavery ceased to be recognised in the islands of Zanzibar and Pemba.

As the centre of the Arab power, Zanzibar, from the beginning of the 19th century until quite recently, dominated the trade of East Africa. The islands possess practically a monopoly in cloves (the export of which was valued at £586,000 in 1920) and produce quantities of copra (exports in 1920 £368,000). In addition, Zanzibar serves as a storehouse for the East African coast, where both imports and exports are received and distributed.

Of late years the importance of Zanzibar as a port of transhipment and distributing centre has largely decreased, owing to the development of the mainland, to the opening up of the coast ports to direct steamship service with Europe, and to the transfer to Aden of the seat of trade with the Benadir coast. Recent figures, however, tend to indicate that the island, in spite of losing the main transhipment trade, will continue, from the very fact of its geographical position, to retain control of the local traffic—of that portion of the trade which goes to small towns up and down the adjacent mainland coast.

The principal imports are rice, grains, groceries, sugar, tobacco, copra, hardware, petroleum and piece-goods; the exports are cloves and copra, in addition to re-exports of previously imported rice, grain, copra and piece-goods.

The city of Zanzibar, on the island of the same name, is the largest in East Africa, and possesses a magnificent harbour, which presents great facilities for shipping and trade generally. The population of Zanzibar and Pemba (Census of 1910) was 198,914, the area of the former 640 square miles, and of the latter 380 square miles.

The number of ocean-going steamers which entered the port in 1920 was—British 184, Italian 22, Portuguese 15, French 13, Norwegian 7, others 6, the total tonnage being 396,214; and 4,871 dhows (91,796 tons) entered the port in 1920.

Trade of the Port of Zanzibar in 1920:—

* Preliminary figures.

IMMIGRATION.

Statistics concerning the arrival of aliens are available for nearly a century, but the Government exhibits little interest in those who leave its shores. From 1790-1917 33,108,353 alien passengers arrived in the U.S. The following figures (from the *Statistical Abstract*) show the number of arrivals at certain periods from 1820-1920:—

YEAR.	IMMIGRANTS.	YEAR.	IMMIGRANTS.
1820	8,385	1910	1,041,570
1840	84,066	1913	1,107,802
1850	369,980	1914	1,218,480
1860	133,143	1915	326,700
1870	327,203	1916	298,826
1880	457,237	1917	295,403

1900	448,572	1919	141,122
1905	1,026,499	1920	430,001

MARRIAGE AND DIVORCE.

The Law of Divorce differs in many of the States, while South Carolina has no Divorce Law. In addition to adultery and cruelty of the husband or adultery of the wife, abandonment (desertion), habitual drunkenness, and imprisonment for felony are qualifying offences.

YEAR	MARRIAGES	DIVORCES GRANTED.		
	Total.	To Wife	To Husband.	Total.
1904	781,145	44,010	22,189	66,199
1905	804,787	45,756	22,220	67,976
1906	853,290	48,607	23,455	72,062
1916	1,040,778	74,893	33,809	112,036

BIRTHS AND DEATHS.

Births and Deaths are reported only in the "Registration Area," which covers about 73 per cent. of the United States. The Births in the Registration Area for 1917 numbered 1,353,792, of which 1,280,288 were white and 73,504 coloured; in 1919 the total number of Births in the Area was 1,373,438. Deaths recorded in the Registration Area for the decade 1908-1917:—

YEAR.	DEATHS (Reg. Area).	YEAR.	DEATHS (Reg. Area).
1908	691,574	1913	890,848
1909	732,536	1914	898,039
1910	805,412	1915	909,155
1911	839,284	1916	1,007,922
1912	838,251	1917	1,068,922

Suicides.—In the first six months of 1921 there were 6,509 cases of suicides in the United States, 4,527 being males and 1,982 females, including 214 boys and 293 girls.

PHYSIOGRAPHY.

The Republic occupies the southern portion of the North American Continent, between the Atlantic and Pacific Oceans, in latitude 25° – 49° North and longitude 67° – 124° $30'$ West, its northern boundary being Canada and the southern boundary Mexico.

Its coast-line on both oceans has an estimated length of about 15,610 miles, besides 3,620 miles on the great lakes and 5,744 on the Gulf of Mexico. The principal river is the mighty Mississippi-Missouri, traversing the whole country from north to south, and having a course of 4,500 miles to its mouth in the Gulf of Mexico, with many large affluents, the chief of which are the Yellowstone, Nebraska, Arkansas, Ohio, and Red Rivers. The rivers flowing into the Atlantic and Pacific Oceans are comparatively small; among the former may be noticed the Hudson, Delaware, Susquehanna, Potomac, and Savannah; of the latter, the Columbia, Sacramento, and Colorado. The Mobile and Colorado of Texas fall into the Gulf of Mexico, also the Rio Grande, a large river partly forming the boundary with Mexico. The areas of the water-basins have been estimated as follows:—Rivers flowing to the Pacific, 644,040 square miles; to the Atlantic, 488,877; and to the Gulf of Mexico, 1,683,325 square miles, of which 1,257,547 are drained by the Mississippi-Missouri. The chain of the Rocky Mountains separates the western portion of the territory from the remainder, all communication being carried on over certain elevated passes, several of which are now traversed by railroads; west of these, bordering the Pacific coast, the Cascade Mountains and Sierra Nevada form the outer edge of a high table-land, consisting in great part of stony and sandy desert, and in which occurs the Great Salt Lake, extending to the Rocky Mountains. Eastward the country is a vast, gently undulating plain, with a general slope southwards towards the marshy flats of the Gulf of Mexico, extending to the Atlantic, interrupted only by the Alleghany Mountains, of inferior elevation, in the Eastern States. Nearly the whole of this plain, from the Rocky Mountains to some distance beyond the Mississippi, consists of immense treeless savannahs and prairies of luxuriant grass. In the Eastern States (which form the more settled and most thickly inhabited portion of the territory) large forests of valuable timber, as beech, birch, maple, oak, pine, spruce, elm, ash, walnut; and in the south, live-oak, water-oak, magnolia, palmetto, tulip-tree, cypress, &c., still exist, the remnants of the wooded region which formerly extended over all the Atlantic slope, but into which great inroads have been made by the advance of civilisation. The Mississippi valley is eminently fertile. The mineral kingdom produces in great abundance iron copper, lead, zinc, and aluminium; the non-metallic minerals including immense quantities of coal, anthracite, petroleum, stone, cement, phosphite rock, and salt. Precious metals include gold and silver, raised mainly in Colorado, California, and Alaska (gold), and Colorado, Montana, Utah, and Idaho (silver); while precious stones are worked in great variety, including the turquoise, sapphire, tourmaline, and garnet.

HISTORY.

Early Colonisation.—A natural factor, the great expanse of ocean which divides the American continent from Asia, has saved America from *Asiatic* domination, and it required many centuries of progress before the *European* adventurer dared to attempt the passage of the narrower Atlantic. The aboriginal inhabitants were comparatively few in number, and being generally backward in development, except in Mexico, have left few permanent traces of their presence.

Although Columbus discovered America in the 15th century (Oct. 12, 1492), American history may be said to commence with the colonising expeditions from Europe in the 16th and 17th centuries. No definite European settlement was attempted until the last quarter of the 16th century, when England, Holland, Sweden, France, and Spain made determined efforts to bring into account the potential wealth of the newly discovered continent. Of these nationalities the English secured a paramount

influence, through their natural aptitude for colonisation, which continues to distinguish that race (and in a greater degree the Scotch) amongst the nations of Europe. In the 17th century a chartered company founded *Jamestown* (1607), and many Royalist settlements were established in the district which had been named *Virginia*, after Queen Elizabeth, in the previous century. But step by step with the Church and Royalist foundations in the South a similar series of Puritan and Separatist centres was established in the North. The small band of "Pilgrim Fathers" in their 180-ton *Mayflower*, from Southampton, England, to Plymouth, Massachusetts (1620), was soon followed by a stream of well-to-do merchants from Boston, Lincolnshire and other east coast English towns, and *New England* became rapidly prosperous. Between these two settlements the Dutch had established themselves in *New Netherlands* (1621), and the Swedes in *New Sweden* (1638). Other English foundations were *Maryland* (1632), *Carolina* (1663), *New York* (1664), *New Jersey* (1665), and *Pennsylvania* (1681). From that date Continental enterprise may be said to have ceased for half a century, and *Georgia* (1732) was the last of the English settlements.

Anglo-French Wars.—A continuous struggle was waged between the English and French settlements in America, but until the *War of 1754-1763* little part was taken by Great Britain in the actual campaigns. The issue of this war decided the fate of America. It secured the possession of the Pacific coast for the inhabitants of the Atlantic slope, and roused the interests of the British Government in the possibilities of its American colonies. The Home Government endeavoured to recover from the colonies part of the cost of the war by which their existence had been secured, but "taxation without representation" was bitterly resented. In December, 1773, some English ships laden with tea arrived in the harbour of Boston, where a non-importation agreement was strictly enforced. A band of colonists, disguised as Indians, boarded the vessels and threw their contents into the sea. This *Boston Tea Party* of December 16, 1773, remains as an outstanding incident in the quarrel between America and Great Britain.

The War of Independence.—In spite of the counsels of Chatham, the King persisted in repressive measures. The colonists resisted in arms, and bloodshed ensued at the first engagement at *Lexington*, April 19, 1775, and continued until the *Capitulation of Yorktown*, October 19, 1781, when *Lord Cornwallis* surrendered with the whole of his forces to *General Washington*. When peace was concluded between America and Great Britain (Sept. 3, 1783), no vestige of territory over which the dispute had raged remained under British rule.

The Declaration of Independence.—On July 4, 1776, the delegates of the various American colonies adopted the Declaration of Independence.* "*We, the representatives of the United States of America, in Congress assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, solemnly publish and declare that these United Colonies are, and of right ought to be, Free and Independent States.*" This Declaration was at length acknowledged by Great Britain, and the United States of America from this beginning has become one of the greatest Powers of the world. The Declaration of Independence was followed by the framing of a *Constitution*, which was ratified in 1787 to 1790 by the 13 *Original States* (Delaware, Pennsylvania, New Jersey, Georgia, Connecticut, Massachusetts, Maryland, South Carolina, New Hampshire, Virginia, New York, North Carolina, and Rhode Island). This Constitution established a legislature of two houses, and vested the executive power in an elective President, and on April 30, 1789, *George Washington* entered office as the first of a line of Presidents of the United States of America.

War of 1812.—The maritime war of Britain and France led to the outbreak of hostilities between the former and the United States, owing mainly to the rival interpretation of the law of allegiance in connexion with impressment of British subjects from American ships to serve in the British Navy. On June 18, 1812, the United States declared war against Britain, in which the latter was generally successful on land and the United States almost invariably victorious on the sea. A land engagement at *Chateaugay* on October 26, 1813, gained lasting glory for the troops of Canada, and earlier in the same year—June 1, 1813—a duel at sea between the *Chesapeake* and the *Shannon* did much to restore the prestige of the British Navy. Peace was concluded by the *Treaty of Ghent* on December 24, 1814, after a purposeless war, which Canada alone has reason to remember with satisfaction.

* On April 30, 1819, the Raleigh (N.C.) Register published the following document, said to have been adopted by the Committee of Mecklenburg County, North Carolina, on May 20, 1775, the day after the receipt of the news of the battle of Lexington. "In the third session of the Second Continental Congress, Richard Henry Lee proposed, and John Adams, of Massachusetts, seconded, a resolution declaring the United Colonies free and independent States; and Thomas Jefferson, John Adams, Roger Sherman, and Robert Livingston were appointed a committee to draw up a Declaration of Independence. This famous document, composed almost entirely by Jefferson, was adopted unanimously on July 4, 1776."

The Gold Rush.—In 1846 a dispute arose between the United States and Mexico in connexion with the boundaries of *Texas*, recently (1845) admitted as a State of the Union, and after hostilities of several months the war ended in the *Treaty of Guadalupe Hidalgo* (1847). Under this treaty Mexico surrendered the disputed portions of Texas and New Mexico, part of Arizona, and California. In 1848 a great rush of goldseekers entered the newly acquired territory, which remains the principal gold-producing State of the Union.

The Civil War.—Among the industrial classes of America in 1860 nearly 4,000,000 were negro slaves, descendants of those planted in the Colonies by Britain. The question of their emancipation led to a bitter dispute between the Northern and Southern States of America, the latter seceding from the Union in 1861. Two years earlier John Brown, an advocate of emancipation, had embittered the relations between the North and South by a raid upon the Government arsenal at *Harper's Ferry*, which he captured and held until forced to surrender; and although he was hanged by the State of Virginia his object was eventually achieved by President Lincoln's *Emancipation Proclamation* of January 1, 1863. The *Secession of the Southern States* was followed by hostilities, which included many pitched battles, fought with astonishing tenacity and prolific slaughter on both sides. Hostilities ceased soon after the surrender of *General Lee at Appomattox* on April 9, 1865, and the bitterness engendered by the war was buried in a lasting peace. By a careless observance of the Foreign Enlistment Act, Britain permitted the departure from Liverpool of the *Alabama*, which committed depredations upon United States shipping, and was also guilty of other acts of negligence, for which, under the *Treaty of Washington*, May 8, 1871, Britain was called upon to pay £3,250,000 damages to the United States. In the four years' war the Confederate (Southern) States lost over 200,000 men by death and disease, while the victorious Federal (Northern) States lost close on 350,000 from the same causes.

War with Spain.—The continuous misgovernment of the neighbouring island of *Cuba* brought America into conflict with Spain in 1898. A succession of revolts, which the Spanish forces were unable to suppress, left Cuba the prey to anarchy, and induced the United States to despatch to Havana the warship *Maine*. By accident or design that vessel was destroyed by an explosion (Feb. 15), and the United States declared war against Spain on April 25, 1898. The outcome of the hostilities was the freedom of Cuba and the acquisition by the United States of the Spanish possessions in the *Philippine Islands*, in addition to *Guam* (Pacific) and *Porto Rico* in the West Indies.

The Panama Canal.—On June 28, 1902, Congress appropriated the sum of \$40,000,000 for the purchase of all outstanding rights in the work inaugurated on the *Panama Canal*, and on April 28, 1904, a further sum was granted for the purchase of a strip of territory on each side of the proposed waterway from the Republic of Panama. Operations were immediately undertaken, and the Canal was completed in 1913, and was opened to traffic with no inaugural ceremony on August 1, 1914.

Anglo-American Arbitration.—A Treaty of Arbitration between the United Kingdom and the United States was signed at Washington, August 3, 1911. The Treaty contained seven Articles (see 1912 Edition of WHITAKER'S ALMANACK). An Anglo-American Peace Commission Treaty was signed by Mr. Bryan and the British Ambassador on Sept. 15, 1914.

The World War.—On April 6, 1917, the United States, after fruitless endeavours to obtain guarantees from Germany that the rights of neutrals on land and sea would be observed, entered the World War on the side of France, Great Britain and the Allied and Associated Powers. The first shot by U.S. troops (Oct. 27, 1917) was followed by a full participation in the campaigns of the Allies, and the Armies of the United States contributed very largely to the defeat of the Central Powers. At the date of the *Armistice* (Nov. 11, 1918) 3,670,888 troops had been placed under arms, and 77,459 were numbered amongst the killed or died of disease, accident or other causes. U.S. troops also figured amongst the armies sent to the assistance of Russia against the Bolshevik régime, but these were withdrawn, in accordance with the plans of the Allies, in 1919.

GOVERNMENT.

The United States of America is a Federal Republic consisting of 48 States and 1 Federal District (of which 13 are Original States, 7 were admitted without previous organisation as Territories, and 28 were admitted after such organisation), and of 2 organised Territories.

THE CONSTITUTION.—By the Constitution of Sept. 17, 1787 (to which ten amendments were added on Dec. 15, 1791, and eleventh to nineteenth Jan. 8, 1798, Sept. 25, 1804, Dec. 18, 1865, July 28, 1868, March 30, 1870, Feb. 25, 1913, May 31, 1913, Jan. 29, 1919, and Aug. 26, 1920), the government of the United States is entrusted to three separate authorities—the Executive, the Legislative, and the Judicial.

THE EXECUTIVE.

THE Executive power is vested in a President, who is elected every four years, and is eligible for re-election. The mode of electing the President is as follows:—Each State appoints, in such manner as the Legislature thereof directs (they are now elected by popular vote on the *first Tuesday after the first Monday in November* of the year preceding the year in which the Presidential term expires), a number of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress; but no Senator or Representative, or anyone holding office under Government, shall be appointed an elector. The electors for each State meet at their respective State Capitals on the *second Monday of the January* following, and there vote for a President by ballot. The ballots are then sent to Washington, and opened on the *second Wednesday of February* by the President of Senate in presence of Congress, and the candidate who has received a majority of the whole number of electoral votes cast is declared President for the ensuing term. If no one has a majority, then from the three highest on the list the House of Representatives elects a President, the votes being taken by States, the representation from each State having one vote. There is also a Vice-President, who, on the death of the President, becomes *ex officio* President for the remainder of the term. In case of the removal or death of both President and Vice-President, a statute provides for the succession of the Secretary of State, Secretary of the Treasury, Secretary of War, Attorney-General, Postmaster-General, Secretary of Navy, and Secretary of the Interior, so that the State can never be without a Head or Ruler.

The President must be 35 years of age and a native citizen of the United States. He receives a salary of \$75,000, with a travelling allowance of \$25,000. Executive duties:—

(1) He is Commander-in-Chief of the Army and of the Navy (and of the Militias when they are in Federal service), and he commissions all officers therein.

(2) With the consent of the Senate, he appoints the Cabinet officers and all the chief (and many minor) officials.

(3) He exercises a general supervision over the whole Federal Administration and sees that the Federal Laws are duly carried out. Should disorder arise in any State which the authorities thereof are unable to suppress, the aid of the President may be invoked.

(4) He conducts the Foreign Policy of the Republic, and, with the approval of the Senate, negotiates Treaties with Foreign Powers. The Declaration of War rests with Congress.

(5) He makes recommendations of a general nature to Congress, and when laws are passed by Congress he may return them to Congress with a veto. But if a measure so vetoed is again passed by both Houses of Congress by a two-thirds majority in each House, it becomes law, notwithstanding the objections of the President.

THE PRESIDENT.

President of the United States, Warren Gamaliel Harding, of Ohio (born at Blooming Grove, Morrow County, Ohio, Nov., 1865; student at Ohio Central College, 1879-1882; newspaper editor and publisher from 1884; member Ohio Senate 1899-1903; Lieutenant-Governor of Ohio 1904-5; United States Senator 1915-1921); elected Nov. 2, 1920, and came into office March 4, 1921, until March 4, 1925. *Republican*.

1. *Vice-President of the United States* (and *ex-officio* President of the Senate), Calvin Coolidge, of Massachusetts (born July 4, 1872, Governor of Massachusetts 1919-1920).

THE CABINET.

(In order of succession to the Presidency.)

2. *Secretary of State*, Charles Evans Hughes, of New York (born 1862), appointed March 4, 1921.

3. *Secretary of the Treasury*, Andrew W. Mellon, of Pennsylvania (born 1855), appointed March 4, 1921.

4. *Secretary of War*, John Wingate Weeks, of Massachusetts (born 1860), appointed March 5, 1921.

5. *Attorney-General*, Harry M. Daugherty, of Ohio (born 1860), appointed March 5, 1921.

6. *Postmaster-General*, Will H. Hays, of Indiana (born 1879), appointed March 5, 1921.

7. *Secretary of the Navy*, Edwin Denby, of Michigan ((born 1870), appointed March 5, 1921.

8. *Secretary of the Interior*, Albert Bacon Fall, of New Mexico (born 1861), appointed March 5, 1921.

Secretary of Agriculture, Henry C. Wallace, of Iowa (born 1866), appointed March 5, 1921.

Secretary of Commerce, Herbert Clark Hoover, of California (born 1874), appointed March 5, 1921.

Secretary of Labour, James J. Davis, of Pennsylvania (born 1873), appointed March 5, 1921.

DEPARTMENT OF STATE.

(New York and Pennsylvania Aves., Washington, D.C.)

The *Department of State* has cognizance of all matters appertaining to Foreign Affairs, including correspondence with Representatives of the U.S., both diplomatic and consular, and with accredited Representatives of Foreign States in the U.S. The *Secretary of State* is the custodian of the Seal of the U.S., which is utilized by him to all proclamations, to various commissions, and to warrants of extradition; he is also the Custodian of the Laws of the U.S. and of Treaties made with Foreign Powers. He grants and issues Passports, and communicates to Congress reports made by Diplomatic and Consular officers of the U.S. He is the medium of correspondence between the President and the chief executives of the States of the Union.

DEPARTMENT OF THE TREASURY.

(15th Street, Washington, D.C.)

The *Secretary of the Treasury* is charged by law with the management of the national finances. He prepares plans for the improvement of the revenue and for the support of the public credit; superintends the collection of the revenue, and directs the issue of money and rendering public accounts and of making returns; grants warrants for money drawn from the Treasury in pursuance of appropri-

tions made by law, and for the payment of moneys into the Treasury; and annually submits to Congress estimates of the probable revenues and disbursements of the Government. He controls the construction and maintenance of public buildings; the coinage and printing of money; the administration of the Coast Guard and the Public Health branches of the public service, and furnishes generally such information as may be required by either branch of Congress on all matters pertaining to the foregoing. He is *ex-officio* chairman of the Federal Reserve Board, created by Act approved December 23, 1913, known as the Federal Reserve Act; *ex-officio* chairman of the Federal Farm Loan Board, created by Act approved July 27, 1916, known as the Federal Farm Loan Act; and president of the central executive council of the International High Commission, and chairman of the United States section of that Commission.

Secretary of the Treasury, Andrew W.

BOARD OF INDIAN COMMISSIONERS, Washington, D.C.

The Board of Indian Commissioners is appointed by the President, and its members serve without salary. The Board inspects all branches of the Indian Service and makes recommendations to the Secretary of the Interior as to policies and needs of administration of Indian Affairs. In 1900 the Indian population of the U.S., exclusive of Alaska, was 333,999 (Oklahoma containing 119,255, Arizona 42,400, New Mexico 22,520, S. Dakota 23,020, California 16,241, Washington 11,114, Montana 12,374, Minnesota 12,681, Wisconsin 10,319, and the 39 remaining States less than 10,000 each). Total disbursements authorised for the fiscal year ended 30 June, 1901, for Indian Service were \$22,847,997, including \$6,827,442 from Indian tribal funds. The total wealth of U.S. Indians under the nominal control of the Indian Bureau on June 30, 1900, amounted to \$761,725,329, of which \$216,341,882 was tribal, and \$545,383,447 individual.

Members, George Vaux, jr. Pa (Chairman); Merrill E. Gates, D.C.; Warren K. Moorehead, Mass.; Samuel A. Elliot, Mass.; Frank Knox, N.H.; William H. Ketcham, D.C.; Daniel Smiley, N.Y.; Hugh L. Scott, N.J.; Malcolm McDowell, Ill. (Secretary).

CIVIL SERVICE COMMISSION, Washington, D.C.

The Civil Service Commission holds frequent examinations for the general public service in various parts of the country for close on 60 per cent. of the 700,000 positions in the Executive Civil Service.

Commissioners, George R. Wales, Vt.; Helen H. Gardener, Va. each 5,000
Chief Examiner, Herbert A. Flier, Md. 3,500
Secretary, John T. Doyle, N.Y. 2,500

NATIONAL COMMISSION OF FINE ARTS, 1729, New York Avenue, N.W., Washington, D.C.

The Commission of Fine Arts was created by Congress 17 May, 1901, to advise generally upon the location, selection, and erection of statues, fountains, and monuments in the District of Columbia, and also to advise generally upon questions of art when required to do so by the President or by any committee of either House of Congress. Under this latter provision its functions have been enlarged by Executive Order to cover all works of Art with which the Federal Government is concerned, including designs of public buildings, public parks, within the D.C. An expenditure not exceeding \$10,000 in any one year is authorised by Congress for travelling and other expenses. The members serve without remuneration.

Chairman, Charles Moore, Detroit, Mich.
Vice-Chairman, John Russell Pope, N.Y.
Members, James L. Greenleaf, N.Y.; James E. Fraser, N.Y.; Henry Bacon, N.Y.; Louis Ayres, N.Y.; H. Siddons Mowbray, Conn.
Secretary and Executive Officer, Lieut.-Col. G. O. Sherrill, Corps of Engineers.
Asst. to Secretary, H. P. Caenutt.

UNITED STATES GEOGRAPHIC BOARD, Washington, D.C.

By Executive order of August 10, 1902, the official title of the United States Board on Geographic Names was changed to United States Geographic Board and its duties enlarged. The Board passes on all unsettled questions concerning geographic names which arise in the departments, as well as determines, changes, and fixes place names within the United States and its insular possessions, and all names suggested by any officer of the Government shall be referred to the board before publication. The decisions of the board are to be accepted by all the departments of the Government as standard authority.
Chairman, Dr. C. Hart Merriam.
Secretary, Charles S. Sloane.

UNITED STATES RECLAMATION SERVICE.

Director, Arthur P. Davis, Interior Dept. Building, 19th and F, N.W., Washington, D.C.
Western Office, Tramway Buildings, Denver, Colorado. **Employees**: Washington Office, 90; Western, 3,000 to 5,000. **Expenditure** per year about \$8,000,000.

The Reclamation Service was organised as a bureau of the Interior Department, under the Reclamation Act of June 17, 1902. It is engaged in the investigation, construction and operation of irrigation works in the 17 arid and semi-arid States of the West. Twenty-five primary and three Indian projects are under construction or operation, aggregating 3,200,000 acres, and the major works aid in serving an additional 1,100,000 acres under private canals that generally get stored water from the government reservoirs. The funds for this work have come chiefly from the sale of public lands, and the money expended is returned to the fund by easy payments of settlers, usually in twenty annual instalments without interest, in accordance with the Reclamation Extension Act of August 13, 1914.

The Service has built about 13,000 miles of canals, ditches and drains (including 100,000 canal structures), involving the evacuation of 183,000,000 cubic yards of materials. In connexion with this work there have been constructed 100 storage and diversion dams with an aggregate volume of 13,980,000 cubic yards, including the Arrowrock Dam (349 feet high), Idaho, on the Boise River and the Elephant Butte Dam (306 feet high), New Mexico, on the Rio Grande. The Service has built 95 tunnels, 986 miles of road, 83 miles of railroad, 3,224 miles of telephone line, a dozen power plants and 672 miles of transmission lines. It is mining coal, and has manufactured 1,676,000 barrels of cement and sand cement. The net construction cost to June 30, 1900, was \$130,870,000.

Over 150,000 persons are living on the 42,000 farms irrigated by the Service. Of the 3,200,000 acres above referred to, water was furnished in 1900 to 1,675,000 acres, and of this area 1,196,000 acres were harvested in 1900, producing crops worth over \$67,000,000, or an average of about \$60 per acre. The additional lands using stored water yielded crops worth \$20,000,000 more.

Public land farm units on the several projects are opened for settlement from time to time as canals are extended to make irrigation water available. Under present law, soldiers of the World War have a preference right to enter these farms, and at recent openings such soldiers have taken all units.

Information in regard to farms available for settlement may be obtained by addressing, Director, U.S. Reclamation Dept. of the Interior, Washington, D.C.

The Service issues the "Reclamation Record," a 48-page illustrated monthly publication, containing articles of interest to irrigation farmers and engineers. An annual report is also issued.

An engineering library of about 3,000 manuscript and printed volumes on the subject of irrigation is maintained in the Washington office of the Service. This library contains descriptions of the construction and operation of the projects, with numerous photographs and maps, cost data and results of original experimental investigations, and is available for consultation by those interested.

GOVERNMENT PRINTING OFFICE, North Capitol Street, Washington, D.C.

The Government Printing Office of the United States was established by Congress in 1860 and has been in continuous operation since that time. The present buildings having a floor space of 14 acres, together with the machinery and equipment which they contain, represent an expenditure of approximately \$6,000,000. The annual cost of operation and maintenance is about \$13,000,000. There are 4,500 persons annually employed in the various divisions of the office at a total yearly wage roll of more than \$6,000,000. In addition to doing all of the printing and binding ordered for Congress, the office executes nearly all the printing and binding required by the various executive departments and independent establishments of the U.S. Government. The office has the largest battery of type-setting machines in the world, including 86 linotype machines, 100 monotype key-boards and 125 monotype casting machines, which produced a total of 2,227,615,000 ems of type in 1920. The 150 presses of the office are credited with 2,377,644,000 chargeable impressions. During the year the office computed bills for 6,225 separate jobs.

In addition to the execution of all kinds of printing and binding, including 1,972,345,000 postal cards, and 12,000,000 square inches of electrotypes and stereotype, the office manufactures its own printing inks, rollers, glue, type and type metal.

INTERSTATE COMMERCE COMMISSION, Washington, D.C.

The Interstate Commerce Commission has supervision over all common carriers engaged in interstate transportation of passengers or property wholly by railroad, or partly by railroad and partly by water, when both are used under common control, management, or arrangement for a continuous carriage of shipment,

including express, sleeping and parlor car companies, telephone, cable, telegraph and wireless companies, also pipe lines.

<i>Chief Clerk and Purchasing Agent, T. Leo Haden</i>	

LIBRARY OF CONGRESS, Capitol Hill, Washington, D.C.

The Library of Congress was established in 1800 and destroyed by fire in 1814. In 1825, purchase of Jefferson collection formed basis for a new collection. Partially destroyed by fire, 1851, and replenished in 1851-2. Since that date increased (1) by regular annual appropriations by Congress (now \$508,000); (2) by deposits under the copyright law; (3) by gifts and exchanges; (4) by the exchanges of the Smithsonian Institution, the library of which (40,000 volumes) was, in 1866, deposited in the Library of Congress, with the stipulation that future accessions should follow it. It comprises 2,918,256 printed books and pamphlets, the floor space of the building (erected at the cost of \$6,347,000, and first occupied in 1897) being 544,000 square feet, and the capacity of the book stacks 3,540,000 octavo volumes and 84,000 volumes of newspapers, the shelving extending to nearly 103 miles. The library is maintained by Congress, the appropriation in 1922 being \$711,745.

<i>Librarian of Congress, Herbert Putnam, LL.D.</i>	\$7,500
<i>Chief Assistant Librarian, Appleton P. C. Griffin</i>	4,500
<i>Chief Clerk, Allen R. Boyd</i>	2,500
<i>Secretary, Jessica L. Farnum</i>	1,800

U.S. MILITARY ACADEMY, West Point, N.Y.

The United States Military Academy for training cadets for commissions in the U.S. Army was founded at West Point, on the west bank of the Hudson River, in 1802. Superintendent, Brig.-Gen. Douglas MacArthur, U.S. Army.

NAVAL ACADEMY, Annapolis, Maryland.

The United States Naval Academy was founded in 1845 for the education of officers for the Navy. Students are called midshipmen, and must be citizens of the U.S. The course of instruction comprises four years at the Academy. Superintendent, Rear-Adm. Henry B. Wilson, U.S. Navy.

THE LEGISLATURE.

The Legislative power is vested in two Houses, the Senate and the House of Representatives, the President having a veto power, which may be overcome by a two-thirds vote of each House. The Senate is composed of two Senators from each State, elected by the people thereof for the term of six years, and each Senator has one vote; and Representatives are chosen in each State, by popular vote, for two years. The number of

Representatives for each State is allotted in proportion to its population—at present 1 for 221,877. The Senate consists of 96 members. The salary of a Senator is \$7,500 per annum, with mileage at 20 cents per mile, coming and returning, for each regular session. The House of Representatives consists of 435 representatives and territorial delegates. The salary of a Representative is \$7,500 per annum, with mileage as for Senators.

THE SIXTY-FIFTH CONGRESS.

<i>President of the Senate</i> , Calvin Coolidge, Mass.	\$12,000
<i>President (pro tempore)</i> , Albert B. Cummins, Iowa	
<i>Speaker of the House of Representatives</i> , Frederick H. Gillett, Mass.	12,000

THE JUDICATURE.

The Federal Judiciary consists of three sets of Federal Courts: (1) The Supreme Court at Washington, D.C., consisting of a Chief Justice and eight Puisne Judges, with original jurisdiction in cases affecting Ambassadors, &c., or where a State is a party to the suit, and with appellate jurisdiction from inferior Federal Courts. (2) The Circuit Courts of Appeal, dealing with appeals from District Courts, and consisting of the Justice of the Supreme Court for the Circuit and all the Circuit and District Judges within the circuit. (3) The District Courts, eighty-seven in number, served by a District Court Judge.

THE SUPREME COURT

(The Capitol, Washington, D.C.).

DEFENCE.

The President is Commander-in-Chief of both Navy and Army, the former being controlled by a Secretary of the Navy, and the latter by a Secretary of War.

THE ARMY OF THE U.S.

Under the provisions of the Act of Congress, approved June 4, 1920, the enlisted strength of the Regular Army, including the Philippine Scouts, must not exceed 280,000, except in time of war or similar emergency, when the public safety demands it; in 1921 Congress limited the enlisted strength for the fiscal year 1921-22 to 150,000 men, exclusive of the Philippine Scouts. By the Act of 1920 the commissioned strength of the Army is limited to 17,717 officers. The actual strength of the Army of the U.S. on July 31, 1921, included 13,192 commissioned officers, 1,290 warrant officers, and approximately 162,000 enlisted men.

PRINCIPAL WARS OF THE U.S.

Name of War.	Troops Engaged.
War of Independence, 1775-1784	300,000
North Western Indian, 1790-1795	8,982
War with France, 1798-1800	4,593
War with Tripoli, 1801-1805	3,330
War with Britain, 1812-1815	528,274
Creek Indian, 1813-1814	13,781
Seminole Indian, 1817-1818	6,911
Black Hawk Indian, 1822	6,465
Cherokee Indian, 1833-1839	9,494
Seminole Indian, 1835-1842	41,122
Creek Indian, 1836-1837	13,428
War with Mexico, 1846-1848	107,631
Texas & New Mex. Indian, 1849-1855	6,465
Oregon Indian, 1851-1856	7,229
Civil War, 1861-1866	2,128,948
Confederate Troops	750,000
Spanish American, 1898-1899	280,564
Philippine Insurrection, 1899-1903	140,028
Chinese Relief Expedition, 1900-1901	6,913
World War, 1917-1918	4,238,395

U.S. WAR PENSIONS.

Year	Number of Pensioners on Roll			Total Payments.
	Invalids.	Widows, &c.	Total.	
				\$
1900	752,510	241,019	993,529	138,462,130
1917	399,926	303,175	673,111	160,895,054
1918	340,318	300,582	646,895	179,835,329
1919	313,140	311,287	624,427	222,159,298
1920	285,110	307,080	592,190	213,295,214
1921	267,629	298,424	566,053	258,715,843

The total disbursement in pensions since the War of Independence is \$6,089,536,538, of which \$5,749,030,455 has been paid on account of the Civil War. The cost of maintenance and expenses of administration in the fiscal year 1921, including the cost of medical examinations and special field examinations, amounted to \$1,860,022.

Disbursements in claims arising out of service in the World War subsequent to Oct. 6, 1917, are not included in the above totals, as such claims are adjudicated in the Bureau of the War Risk Insurance, Treasury Department, which has jurisdiction over such matters.

* THE NAVY OF THE U.S.

No new construction has been authorised for the U.S. Navy since 1918. The three-year building programme initiated in the Act of August 29, 1916, provided for the following construction:—

	1916	1917	1918	Totals.
Battleships	4	3	3	10
Battle Cruisers	4	1	1	6
Scout Cruisers	4	3	3	10
Destroyers	20	15	15	50
Fleet Submarines	—	—	9	9
Coast Submarines	30	18	10	58
Fuel Ships	1	—	2	3
Repair ship	—	—	1	1
Transport	—	—	1	1
Hospital ship	1	—	—	1
Destroyer Tenders	1	1	1	3
Submarine Tender	—	1	—	1
Ammunition ships	1	—	1	2
Gunboats	1	—	1	2

* For the Disarmament proposals of Secretary Hughes at Washington, and for the suggested Naval Holiday, see "Questions of the Day."

Of the "all big gun" ships the *Maryland* and *Colorado* have been launched and are completing for sea, while the *Washington* and *West Virginia* are building. These ships carry eight 16-in. guns (with secondary batteries of 14 5-in. and four 3-in. anti-aircraft guns), and are 624 ft. long, 97 ft. wide, and displace 32,600 tons; they are driven by four electric-drive turbines of 28,900 h.p. The remaining six ships (*Massachusetts-Iowa* class) are designed to carry 12 16-in. guns (and 19 5-in.)

In addition to the vessels listed, 20 coast submarines were specifically authorized in March 1917, and under emergency appropriations made at that time, supplemented by later Acts, six more submarines were purchased in knock-down condition, and orders were placed for 235 35-knot destroyers (six of which were later cancelled), 112 *Eagle* patrol vessels undertaken by the Ford Motor Co. (12 for the Italian Government, which were cancelled together with 40 for the Navy), 448 sub-chasers (100 being for France and seven others never completed), 25 fleet tugs (six cancelled), 54 minesweepers (five cancelled), and 56 harbour and motor tugs.

There were also built 12 large tankers on Emergency Fleet contracts intended for naval use, five of which have been retained in the naval service, together with some 20 auxiliary vessels acquired by purchase or seizure during the war. Of the 341 sub-chasers built for the Navy, all but 98 have been sold, scheduled for sale, or otherwise disposed of.

Of the vessels included in the above 3-year programme, 12 destroyers, six of the fleet submarines, and the transport, have never been laid down, and the Naval Act of July 12, 1917, provides that no expenditures be made for vessels not already under construction. Reduced appropriations for new construction in this Act will also retard progress of vessels now building, which, on July 1, 1917, included 11 battleships, 6 battle cruisers, 10 scout cruisers, 4 destroyers, 37 submarines, 4 fleet submarines, 1 gunboat, and 5 auxiliaries.

All information as to characteristics, costs, &c., available for publication concerning naval vessels, may be found in the Ship Data Book, for any comparisons desired.

EDUCATION.

State School Systems, 1917-1918.

In 1917-18 the total number of children in the United States 5 to 18 years of age was 27,686,476, of whom 20,853,516 (10,349,466 boys and 10,504,050 girls) were enrolled in public elementary and secondary schools, and 1,095,125 were estimated to be enrolled in private elementary and secondary schools. The average daily attendance in the public schools was 15,548,914, the average length of school term was 160.7 days, and the average number of days attended by each pupil enrolled was 119.8 days. In 1917-18, 650,799 teachers (205,194 men and 445,515 women) were employed, the average annual salary of all teachers being \$635. The total number of buildings used as school houses was 276,827, and the estimated value of all public school property was \$1,983,508,812.

The total money received for school purposes, excluding balances on hand and proceeds of bond sales, was \$222,613,162. Of this amount \$7,698,322 was received from permanent school funds and from the rent of school lands, \$224,625,129 from State taxes or State appropria-

tion, \$414,752,223 from local tax or appropriation, and \$22,794,905 from all other sources, State and local. The total payments, excluding payments of bonds, was \$640,717,053. This amount includes expenditures for general professional and business control aggregating \$25,179,311; salaries of teachers, supervisors and principals, \$421,084,254; text-books and other instruction supplies, \$23,033,792; miscellaneous current expenses, \$175,277,768; composed of operation of school plant, \$112,011,558; maintenance of school plant, \$20,046,848; auxiliary agencies, \$22,463,281; fixed charges, \$5,702,516; interest on indebtedness, \$15,154,585; and outlays—sites, new buildings and equipment, \$119,082,944.

Compulsory Attendance Laws, 1917-18.

Every State in the Union has a compulsory school attendance law. In general, children are obliged to attend school from 7 to 14 years of age, and from 14 to 16 must attend school or secure employment certificates. The required attendance each year varies from forty days in one State to the full term in twenty-eight States. Nearly all States have officers charged with enforcing the compulsory attendance law, known in the majority of States as the truant or attendance officer.

Colleges, Universities and Technological Schools, 1917-18.

Of the 554 colleges, universities, and technological schools, 112 are public institutions and 442 are under private control or management. The public institutions enrolled 206,281 undergraduate and graduate students (62,162 men and 44,019 women). The private schools enrolled 147,722 undergraduate and graduate students (80,436 men and 67,306 women). Of the 554 institutions 124 were for men, 100 for women and 330 were co-educational.

The total number of instructors in public and private universities, colleges, and technological schools was 36,522 (29,509 men and 7,013 women). In general engineering 7,203 students were enrolled, in chemical engineering 4,548, in civil engineering 5,108, in electrical engineering 5,683, in technical engineering 5,944, and in mining engineering 1,298.

The total number of baccalaureate degrees conferred in 1917-18 was 28,052 (14,720 men and 13,332 women); altogether 3,480 graduate degrees were conferred (2,320 men and 1,160 women). 735 honorary degrees were conferred.

The total receipts for all universities, colleges, and technological schools in 1917-18 aggregated \$123,801,555. The total receipts, exclusive of additional to endowments, were \$137,055,415. The number of volumes in the libraries of these institutions was 23,025,736. It was estimated that the value of libraries, scientific apparatus, machinery, and furniture was \$30,766,793; value of grounds, \$104,069,421; value of buildings, including dormitories, \$329,927,558; the value of dormitories, \$23,143,845; and the value of productive funds, \$481,085,822. During the year the total benefactions received was \$10,704,805.

Normal Schools, 1917-18.

In 1917-18, 308 normal schools reported. These schools are chiefly concerned with the training of elementary teachers. Of this number, 172 are State institutions; 34 city normal

schools; 45 county normal schools; and 57 private normal schools. The total number of instructors in all these schools is 8,552. Of this number, 4,949 are engaged in instructing pupils in normal courses. The total number of students enrolled is 128,174 (21,287 men and 106,887 women). Of this total enrolment, 110,053 students are in normal training courses. The number of graduates from the normal training courses was 2,170 men and 22,331 women, making a total of 24,501. Practice or model schools are usually operated in connexion with these normal schools, or the public schools are used for this purpose. The total enrolment in these model schools was 83,602. The total receipts for normal schools were \$22,728,203. The total number of volumes in the libraries was 2,172,627. The statistics show that the number of State normal schools has gradually increased, while the number of private normal schools has rapidly decreased. The city and county normal schools are new institutions. The total number of such schools throughout the United States is not represented in the report, inasmuch as many of these schools have been organised very recently. The average cost per week per student in attendance for maintaining a State normal school is \$6 43 cents.

Summer Schools, 1918.

In 1918, 480 summer schools were maintained. Of this number 358 schools were conducted by colleges, universities, and normal schools. 104 universities and 109 colleges are included in this total. The total number of instructors employed in these summer schools was 11,960 (7,472 men and 4,488 women). In addition to the instructors 1,762 lecturers were reported. The total number of students enrolled in these summer schools was 160,422 (33,445 men and 126,977 women). The average cost of conducting summer schools per student enrolled in 1918 was \$24.14. The corresponding cost for 1916 was \$17.85.

One hundred and fifty-eight colleges, universities and normal schools maintained a 6-weeks course, 44 an 8-weeks course, 20 a 9-weeks course and 37 an 11-weeks course. There appears to be a tendency for institutions of this type to offer an 8, 9, 10 or 11-weeks course. Altogether 272 institutions offered work accredited for degrees. The greater number of these summer schools have a small enrolment. Fifty per cent. of the schools enroll only 10 per cent. of the student body. One school has an enrolment of over 6,000 students.

Professional Schools, 1917-18.

In 1917-18 the schools of theology enrolled 9,354 students and reported 828 graduates; law schools enrolled 11,820 students and reported 2,369 graduates; schools of medicine enrolled 13,802 students and reported 2,423 graduates; schools of dentistry enrolled 8,314 students and reported 1,634 graduates; schools of pharmacy enrolled 4,053 students and reported 1,134 graduates; and schools of veterinary medicine enrolled 1,250 students and reported 475 graduates.

Nurse Training Schools, 1917-18.

The number of nurse training schools has increased very rapidly since 1903. At that time only 47 schools were in existence. In 1918 the number of such schools was 1,776. The number

of pupils enrolled in these schools in 1918 was 55,221, and the number graduating 13,751. These nurse training schools are of two types: 1. Those schools which are more or less general in nature, or which are highly specialised, which treat physical rather than mental disorders. 2. Schools in hospitals for insane patients. The general training schools number 1,680, while the number of schools connected with hospitals for the insane is 86. The figures relate only to hospitals which maintain nurse training departments. The capacity of the hospitals in which these schools are located is 303,193 beds, and the average daily number of patients is 225,899. In the general hospitals there are ordinarily from one to three patients to each nurse pupil in training. In the hospitals for the insane, the corresponding number usually exceeds ten. The nurse training schools in general hospitals are usually small. About half of them do not enroll more than twenty nurse pupils. Within the last seven years the age requirement for admission has been lowered about two years. In 1911 most schools required either a minimum of 20 or 21 years for admission. In 1918 a large majority of schools required a minimum of only 18 or 19 years. In general hospitals the greatest number of schools require ten hours of duty daily, 689 schools having this requirement, 434 schools require nine hours of duty, and 232 schools eight hours of duty. In hospitals for the insane, the number of hours of duty required is usually ten or more. 18 schools require 12 hours of duty, 8 require 13, and 6 require 14.

The remuneration granted to pupils in general hospitals is usually less than two hundred dollars (\$200). In the first year 84 per cent of the schools pay under \$100; in the second year 65 per cent. of the schools pay under \$100; in the third year of the course 54 per cent. pay under \$100. In schools in hospitals for the insane the remuneration usually exceeds \$200. In the first year of the course, half the schools pay from \$300 to \$400; in the second year of the course, 45 per cent. of the schools pay from \$300 to \$400, and 40 per cent. pay over \$400; in the third year of the course, over half the schools pay over \$400, and about 40 per cent. pay from \$300 to \$400.

Almost 90 per cent. of all nurse training schools in general hospitals offer a three-year course. About 10 per cent. offer a two-year or two-and-one-half-year course. Within the last few years practically all nurse training schools have lengthened their course to three years, and usually require attendance for 50 weeks during the year. In hospitals for the insane, about 60 per cent. of the schools offer a three-year course, and about 40 per cent. offer a two-year course. Forty-three per cent. of the general nurse training schools require one year of high school work for admission, 17 per cent. require two years of high school work for admission, 28 per cent. require a full high school course, and 22 per cent. require only the completion of the elementary grades for admission. Within the past few years the tendency has been to require either one or two years of high school work for admission. The statistics indicate a difficulty in securing nurse pupils within the last few years, on account of the lengthening of the course, and that it has been necessary to increase the remuneration, and to lower entrance requirements.

In all 27 universities and colleges offer nurse

training courses. Each of them offers the course to nurse pupils registered in a nurse training school of a hospital affiliated with the college or university. By this co-operation an excellent opportunity is afforded to the training school to secure for their pupils a high type of instruction in technical and academic subjects.

Public High Schools, 1917-18.

In 1917-18, 13,951 public high schools reported. The total number of instructors in these secondary schools was 84,822 (28,781 men and 56,041 women). The total number of secondary students enrolled in these schools was 1,735,619 (747,778 boys and 987,841 girls). The total number of coloured students included in the preceding figures is 21,970. Altogether 1,245,523 students were enrolled in academic courses; 278,275 in commercial courses; 56,832, in technical or manual training courses; 26,675, in teacher training courses; 38,728, in agricultural courses; and 101,987, in home economics courses. In the first year of the course 654,935 students were enrolled, in the second year 441,868, in the third year 309,208, and in the fourth year 239,260 students. Altogether 1,265 schools reported military drill, in which 106,986 boys and 1,152 girls were enrolled. The number of graduates reported was 224,367 (26,922 boys and 197,445 girls).

Of the 13,951 public high schools 6,866 are fully accredited for admission to college. In these fully accredited high schools there are 66,619 teachers and 1,461,775 students (637,612 boys and 824,163 girls). There were 10,628 high schools that reported a four-year curriculum. In these four-year high schools there are 79,083 teachers and 1,654,600 pupils enrolled (714,696 boys and 939,904 girls).

Altogether, 12,631 public high schools reported school libraries with an aggregate of 8,766,863 volumes.

These statistics on public high schools are in the section on State School Systems. By deducting these figures from the totals given in that section the statistics of elementary schools may be secured.

Private High Schools and Academies, 1917-18.

The number of pupils in private high schools and academies, in general, has increased slowly but steadily. The increase has been about proportional to the increase in population. In 1900 the number of students enrolled in these schools was 110,797. In 1917-18 the number enrolled was 158,745. The number of schools reporting in 1900 was 1,976, and the number reporting in 1918 was 2,058. The total number of instructors in these private high schools in 1918 was 14,199 (5,411 men and 8,788 women). In this group of schools more than any other, there is a tendency for the schools to be either for boys or girls exclusively, rather than co-educational. Of the 2,058 schools reporting in 1918, 390 were for boys only, 772 were for girls only, and 996 were co-educational. The number of boys' schools has not increased materially since 1900, while the number of schools for girls has increased almost 50 per cent. There has been a decrease in the number of co-educational schools. Many of the schools for boys as well as some of the co-educational schools offer military drill. Altogether, about one-fourth of the schools had military drill in 1918, enrolling 35,532 students. Of this number 2,639 were girls.

In 1906 the number of boys taking this work was 10,224. Within the past two years the enrolment in military drill in these schools has been tripled. The number of coloured students enrolled in these schools in 1918 was 9,207. The total number of graduates from these institutions was 23,822. The average size of the faculty was 6.9 per cent. The average number of students to a school was 71.1 per cent. The average number of students to a teacher 22.3 per cent.

The number of students enrolled in the first year of these private high schools was 36.6 per cent. of the total number; in the second year, 25.7 per cent.; in the third year, 19.5 per cent.; and in the fourth year, 12.2 per cent.

Altogether, 2,019 schools offered an academic course; 872, commercial; 294, technical or manual training; 281, teacher-training; 152, agricultural; 411, home economics; and 118, a trade training course.

580 of these private schools were non-sectarian, and 1,478 were denominational (940 Roman Catholic).

Of the total number of students enrolled, 45.5 per cent. were boys and 54.5 per cent. were girls.

The number of Negro girls enrolled in these schools was about twice as many as the number of Negro boys, there being 6,021 coloured girls, and 3,086 coloured boys.

Private Commercial Schools, 1917-18.

In 1918 reports were received from 890 private commercial and business schools. These schools are of two types: first, those which are non-sectarian, and which are run on a commercial basis; second, those which are maintained by certain denominations and by Young Men's Christian Associations. The private non-denominational schools reporting number 780, the denominational and Young Men's Christian Association schools number 110. The total number of instructors in these 890 schools is 5,240 (2,310 men and 2,930 women). The number of students enrolled is 289,579 (65,449 men and 193,130 women). The average daily attendance in these schools is 122,688. Altogether 841 schools report 122,614 students enrolled in day courses. In night courses 106,165 students are enrolled in the 716 schools maintaining such courses. In the commercial or bookkeeping course 69,520 students are enrolled; stenographic, 152,402; combined course, 48,481; telegraphic (wire), 4,915; (wireless), 3,022; accountancy, 3,366; secretarial, 13,837; and in the salesmanship course, 3,992. Two hundred and forty-eight schools have an enrolment less than 100; 227 schools have an enrolment between 100 and 200. One-half of the commercial schools enrol about 25 per cent. of the students.

The average number of students per instructor varies considerably in the different schools. The largest group of schools have from 26 to 25 students per instructor.

The average length of the daily session likewise varies considerably in the different schools. Three hundred and fifty-five schools are in session 5 hours per day; 253 schools are in session 6 hours per day.

The usual tuition fee per month in the day course in the majority of schools varies from \$20 to \$25 for any course. The tuition fee for the night course per month is generally \$5 or \$6. The usual tuition fee charged for the entire

commercial or bookkeeping course, or for the entire stenographic course, varies from \$60 to \$80. The time usually required to complete the course is six months. The tuition fee for the combined commercial and stenographic courses usually varies from \$80 to \$140. The tuition fee usually charged for a course in telegraphy (wire) is \$60 to \$80.

The majority of these private commercial schools teach only one system of shorthand, 547 schools failing in this class. Two hundred and two schools teach two systems of shorthand. Forty-eight of the 76 schools having an enrolment of 500 students or more teach the Gregg system of shorthand. Forty of these schools teach some Pitmanic system. Altogether 64.4 per cent. of the schools offer the Gregg system of shorthand, and 44 per cent. offer some Pitmanic system.

Industrial Schools for Delinquents, 1917-18.

In 1918, 135 industrial schools for delinquents reported to the Bureau of Education. Most of these schools are State institutions. Eleven are supported by counties and five by cities, while two are supported jointly by a city and a county. Thirty-one of them are private institutions. In these reformatory institutions 1,137 teachers are employed (655 women and 482 men). In addition to the teachers 3,325 assistants caring for inmates are employed.

In these schools 63,768 inmates were enrolled during the year (49,660 boys and 14,108 girls). In so far as reported, there were 51,786 white children and 8,479 coloured children. Seventy-nine schools have an enrolment less than 300; the other schools vary in size from 300 to 2,500.

The valuation of property per child in average attendance in industrial schools for delinquents in the United States is \$1,645. This varies from \$299 in the State having the lowest average, to \$5,069 in the State having the highest per capita valuation of property. The amount spent annually in the United States for keeping an inmate in one of these institutions is \$287 for current expenses, and \$39 for permanent improvements.

Schools for the Deaf, 1917-18.

In 1917-18 reports were received from 155 schools for the deaf. Of this number, 68 schools are State institutions, 69 schools are maintained as a part of the city public school system, and 18 schools are under private control. The total number of instructors in the three types of schools is 1,821 (1,421 women and 420 men teachers). The total number of pupils enrolled is 14,448. This total includes 11,316 pupils enrolled in State institutions, 2,482 pupils in city day school classes, and 644 pupils in private schools. The number of graduates from secondary schools in State institutions is 206; from secondary schools of city day school classes for the deaf, 5; from private institutions, 3. The average expenditure per pupil for current expenses in State institutions is \$358 and in private institutions \$238.

Schools for the Blind, 1917-18.

In 1918, 62 schools for the blind reported a total enrolment of 5,386 pupils (2,867 boys and 2,519 girls). The number of instructors in these schools is 798 (597 women and 201 men). Fourteen States provide for the education of their deaf and blind in dual institutions, that is, both

deaf and blind pupils are educated in the same schools. Altogether there are 13 such dual schools in the United States. Ten of the schools for the blind included above are operated as a part of the city public school system. Four schools are under private control. The others are State schools or serve as State institutions. The average annual cost per student in schools for the blind is \$428.

Schools for Feeble-minded and Sub-Normal Children, 1917-18.

Nearly all States provide schools for feeble-minded children; 43 schools of this type reported in 1918; 32 private schools also submitted a report. Altogether 131 cities have organised classes for the teaching of sub-normal and backward children. The children in these schools are not usually feeble-minded, but are retarded in their school work. The number of instructors in State institutions was 425, in private institutions 121, and in public day school classes of city schools 1,134. The total number of inmates in State institutions was 35,068 (18,353 boys and 17,615 girls); in private institutions, 983 (467 boys and 516 girls); in public day school classes of city schools, 18,133 (11,937 boys and 6,196 girls).

In State institutions 11 per cent. of the pupils take music, 26 per cent. home economics, 19 per cent. manual training, 11 per cent. agriculture, and 13 per cent. trade training courses. In city day school classes, 90 per cent. of the pupils take music, 27 per cent. home economics, 56 per cent. manual training, 10 per cent. agriculture, and 12 per cent. trade training courses. In private schools 43 per cent. take music, 24 per cent. home economics, 34 per cent. manual training, 14 per cent. agricultural courses, and 4 per cent. trade training courses.

FINANCE.

The ordinary revenue and expenditure of the U.K. for the five years ended June 30, 1922, are stated below (At par \$4 867 = £1 sterling).

Year.	Revenue.	Expenditure.
1918	\$4,174,010,286	\$1,147,898,991
1919	4,634,380,900	18,952,141,181
1920	6,704,414,438	6,141,745,240
1921 (est.)	5,799,758,000	3,213,042,000
1922 (est.)	4,929,730,000	4,068,449,000

RECEIPTS AND EXPENDITURE.

Total Debt less Cash in Treasury \$23,937,971,391

PRODUCTION AND INDUSTRY.

Agriculture.—The total land surface, excluding Island possessions and Alaska, is 1,903,289,600 acres, of which in 1920 955,676,545 were farms (506,982,301 acres improved). The total number of farms in 1920 was 6,448,366, of which about 2,456,000 are between 100 and 500 acres, about 1,475,000 between 50 and 100 acres, and about 1,504,000 between 20 and 50 acres. The total value of the farm produce of the United States in 1920 (preliminary figures) was estimated at \$19,856,000,000—a decrease of \$5,105,000,000 compared with 1919. Crops in 1920 were valued at \$11,145,000,000, and animals and animal products at \$8,711,000,000.

Wool.—The total number of fleeces in 1920 was 35,901,000, producing 259,307,000 lb. fleece; pulled wool, 42,900,000 lb.; total, 302,207,000 lb.

Minerals.—The total value of metallic minerals produced in 1920 was estimated at \$1,724,300,000 (pig iron, \$1,237,926,882; copper, \$222,467,000; gold, \$49,590,400), and of non-metallic minerals the total value was \$4,977,500,000 (bituminous coal, \$1,950,000,000; Pennsylvania anthracite (1919), \$364,926,950; petroleum, \$1,360,000,000; clay products, \$364,220,000; stone, \$150,500,000; natural gas (1919), \$162,000,000; cement, \$193,548,000; and mineral paints (lead and zinc pigments, 1919), \$25,810,671. The exports of coal in 1918 amounted to 19,954,100 tons, in 1919 to 16,393,600 tons, and in 1920 to 34,410,000 tons, and in 1920 the amount sent across the Atlantic amounted to 13,906,000 tons, while 14,509,000 tons went to Canada.

Manufactures.—The manufacturing establishments enumerated at the five-year Census of 1919 numbered 239,768, the value of their products being \$62,910,202,000, as compared with a value in 1914 of \$24,246,435,000. The leading manufacturing States are New York, Pennsylvania, Illinois, Ohio, and Massachusetts. The principal industrial centres are New York (clothing, printing and publishing, copper smelting and refining, slaughtering and meat packing, foundry and machine-shop products, petroleum refining, tobacco, sugar-refining, textiles); Chicago (meat, clothing, iron and steel); Philadelphia (textiles, foundry products and machinery, clothing, printing and publishing); Boston (boots and shoes, rubber, meat, printing and publishing); Pittsburg (iron and steel); Detroit (automobiles); St. Louis (meat, tobacco, shoes); Cleveland (iron and steel, automobiles, clothing); Baltimore (clothing, copper); Cincinnati (foundry products and machinery, meat, clothing); Buffalo (iron and steel, meat, flour); Minneapolis (flour mills, lumber, printing); San Francisco (meat, printing).

Automobile Industry.—The value of the cars and lorries manufactured in 1920 was \$2,232,927,678, of parts and accessories, \$725,136,942, and of tyres and tubes, \$636,750,000. The number of cars produced was 1,883,158, of lorries, 322,039. The capital invested in automobile factories was \$1,204,378,642, giving employment to 325,000 persons, who received \$482,950,000 in 1920. The number of automobile vehicles registered in 1920 in the U.S.A. was 9,211,295, including 3,000,000 automobiles on farms and 900,000 commercial vehicles. The petrol produced in 1920 amounted to 4,882,546,699 gallons, and that consumed to 4,256,428,005 gallons, while 32,400,000 tyres were manufactured in 1920. The taxes levied on the motor industry amounted to \$316,720,000. The number of motor vehicles exported in 1920 was 170,765.

FEDERAL EMPLOYMENT BUREAUX.

The following figures show the work done by the Federal Employment Bureaux during the past five fiscal years ending June 30:—

Statistics for the year ended June 30	Number of applications for help.	Number of persons applied for	Number of applicants for places.	Number referred to employment.	Number actually employed.

PUBLIC ROADS.—In 1919 the total length of public roads was 2,478,552 miles, the cost of their upkeep in 1919 being \$380,455,932, or \$157.12 per mile, or \$3.68 per head of the inhabitants of the U.S.

SHIPPING.—On June 30, 1921, the mercantile marine of the U.S. consisted of 8,941 sailing vessels of 2,537,021 gross tons; 19,071 steam vessels of 15,745,115 gross tons, a total of 28,012 vessels of 18,282,136 gross tons. In the year ended June 30, 1921, sailing and steam vessels of 67,953,294 tons entered at the various ports of the U.S.; of this total 33,956,732 tons were American and 33,996,562 tons foreign. The numbers cleared from the various seaports were 1,664,422 sailing and 55,240,202 tons steam vessels, a total of 56,904,624 tons.

POSTS AND TELEGRAPHS.—On July 1, 1921, there were 22,128 post offices in the U.S. dealing with 22,605,335,592 "pieces" of mail matter of all kinds (letters, postcards, newspapers, packets, &c.). The telegraphs and telephones are not operated by the U.S. Government.

WEIGHTS, MEASURES, AND CURRENCY.

The *Weights and Measures* in common use are shown on page 464. The Metric System of Weights and Measures is permissive, but is little used. The unit of currency is the dollar of 100 cents. The rate of exchange on certain dates in 1921 will be found on p. 457.

* Since spot mileage of switching and terminal companies has been excluded.

In 1914 the value of the U.S. dollar was d. 49³/₄ (£1 = \$4.867) in English currency; \$1 = 5.1813 francs in French currency; and \$1 = 4.2 marks in German currency. On Oct. 10, 1921, the English value of the U.S. dollar was d. 63¹/₄ (£1 = \$3.795).

Dependencies of the U.S.A.

THE PHILIPPINE ISLANDS

are situated between $4^{\circ} 40' - 21^{\circ} 10'$ N. lat. and $116^{\circ} 40' - 126^{\circ} 34'$ E. long., and are distant about 500 miles from the south-east coast of the continent of Asia. Their total land area is 114,400 square miles, of which total 94,946 square miles are contained in the eight largest islands, the 3,130 other islands having a combined area of 14,574 square miles.

Population.—At the Census of 1918 the population was ascertained to be 10,350,730, almost all of Malayan stock, of whom nearly 9,500,000 were Christians (Roman Catholics), about 775,000 were Muhammadans; about 725,000 are pagans. Of the foreign-born residents about three-quarters are Chinese, and of the white population over one-half are from the U.S.A. (8,200 in 1903).

History.—The islands were discovered in 1521 by the Portuguese navigator Magellan, who was slain by the natives of Mactan. In 1542 Spain undertook the conquest of the islands, which were named "Filipinas" after the son of the King of Spain, and in 1571 the city of Manila was founded by the conquistador Legaspi, who subdued the inhabitants of almost all the islands, their conversion from barbarism and paganism being undertaken by the Augustinian friars in Legaspi's train. In 1762 the capital of the Spanish colony was occupied by a British force, but in 1764 the newly-acquired territory was restored to Spain. In the nineteenth century there were frequent disturbances in the islands, and at the outbreak of the Spanish-American War of 1898 a rebellion was at its height under Aguinaldo, a native leader, whose assistance was secured by Admiral Dewey, the commander of the American Pacific fleet, after the annihilation of the Spanish vessels in Manila Bay on May 1, 1898. Manila was captured by the American troops under General Wesley Merritt on Aug. 13, 1898, and the islands were ceded to the United States by the *Treaty of Paris* of Dec. 10, 1898.

Defence.—In 1920 the Philippine Scouts consisted of 234 officers and 8,360 enlisted men; there were also in the islands on April 1, 1920, 538 officers and 13,223 enlisted men of the regular and emergency forces of the U.S. The Philippine constabulary consists of 374 officers and 6,352 enlisted men. All the enlisted men in the scouts and constabulary (and almost all the officers) are natives of the islands.

Trade.—The principal exports are hemp, coconut oil, sugar, and tobacco; the imports being cotton manufactures, and iron and steel manu-

factures. The trade in 1920 was valued at \$151,000,000 for exports and at \$149,500,000 for imports, 62 per cent. of the imports being from U.S. and 70 per cent. of the exports being taken by U.S. Sugar was the principal article of export in 1920, being valued at \$49,500,000, and Manila hemp at \$36,000,000.

Towns.—Capital, Manila, in the island of Luzon; population (Dec. 31, 1918), 283,613. The next largest towns are Cebu (63,500), Albay (53,105), and Iloilo (49,808); there are several others with populations from 25,000 to 40,000. Governor-General (Manila), Charles E. Yeater (acting).

GUAM.

Guam, the largest of the Ladrone or Marianne Islands in the North Pacific Ocean, lies in $13^{\circ} 26'$ N. lat. and $144^{\circ} 39'$ E. long., at a distance of about 1,566 miles east of Manila, the capital of the Philippine Islands, and forms a naval station between that dependency and the United States. The area of the island is estimated at 225 square miles, with a population on July 1, 1920, of 14,724, of whom 13,698 are classed as native, 478 of the naval station, and 548 other than native. The natives are of Chamorro stock, mingled with Filipino and Spanish blood. The language is a Malay dialect containing many Spanish words, but English is fast becoming the language of the island.

CAPITAL, Agaña. Port of entry, Apra. Governor, Capt. I. C. Wettengel, U.S.N.

PUERTO RICO.

Puerto Rico (Rich Harbour) is an island of the Greater Antilles group in the West Indies, and lies between $17^{\circ} 50' - 18^{\circ} 30'$ N. lat. and $65^{\circ} 30' - 67^{\circ} 15'$ W. long., with a total area of 3,606 square miles and a population of 1,207,772 at the census of 1920. Almost all the inhabitants are Roman Catholics. The island is about 200 miles from west to east, and 40 miles from north to south at the western end, narrowing towards the eastern extremity. The capital is 1,400 miles distant from New York, and 98 miles from Key West. Sugar is grown in the low-lying districts, and tobacco and coffee on the slopes of the hills; fruits, cotton, maize, sweet potatoes, rice, and yams are also grown. The trade is principally with the U.S. About 340 miles of railroad were in operation in 1920, and there are good harbours at San Juan and Ponce. The capital, San Juan, had 70,707 inhabitants in 1920, other towns being Ponce (41,562), Mayaguez (19,059), Arecibo (10,039), Bayamon (10,411), and Caguas (12,154). The legislative functions are vested in a legislature which consists of a elective

houses; the Senate, composed of 29 members (2 from each of the 7 senatorial districts and 5 senators at large), and the House of Representatives, composed of 39 members (2 from each of the 35 representative districts and 4 elected at large). The term of the Legislature is 4 years.

Governor, E. Mont. Riley\$10,000

TUTUILA.

Under an agreement between Great Britain, Germany,* and the U.S., of Nov. 14, 1899 the first-named Power abandoned all claims to the islands of the Samoan Archipelago, which were divided by the remaining parties to the agreement, the islands east of 171° W. long. being reserved to the U.S. The territory thus acquired consists of the island of Tutuila and Anuanu, Ofu, Olosenga, Tau, and Rose Islands, with a total area of about 56 square miles and a population estimated at 7,500 in 1922.

Tutuila, the largest of the U.S. group, has an area of about 40 square miles and a population of 5,250, and contains a magnificent harbour at Pago Pago, the capital and seat of government. The remaining islands have an area of about 16 square miles and a population of about 2,000, Rose Island being uninhabited. Copra and cocoa beans are exported.

Governor, Comdr. W. J. Terhune, U.S.N.

WAKE AND JOHNSTON ISLANDS.

The flag of the U.S. was hoisted on Wake Island in 1899, and three other islands in the Pacific have been annexed (Johnston, Palmyra, and Midway).

ALEUTIAN ISLANDS.

The *Aleutian Islands*, or Catherine Archipelago (also known as the Santa Barbara group), lie westward of the district of Alaska, and consist of four groups of islands (Fox, Andreanof, Rat, and Near Islands) between 52°-53° N. lat. and 172° E.-163° W. long. They have a population estimated at 2,000. The principal settlement is at Iliuliuk, on Unalaska Island. The group forms a part of the district of Alaska, and was transferred to the U.S. by Russia in 1867.

VIRGIN ISLANDS.

The three islands, St. Thomas, St. John, and St. Croix, in the Virgin Island group, West Indies, formerly the possessions of Denmark, were purchased by the United States from Denmark for the sum of \$25,000,000, and proclaimed, January 25, 1917. The total area of the islands is 132.37 sq. miles, with a population in 1911 of 27,086. *St. Thomas* (18,080 acres) has a population of 10,121, mostly negroes; *St. Croix*, or *Santa Cruz* (53,912 acres), has a population of 14,901, the capital being Christianstad (or Bassin); *St. John* (959 acres) has a population of 960, the capital being Cruzbay. *St. Croix* exports sugar, rum, and cotton. In *St. Thomas* there are 8 public and 10 parochial schools, 1,705 pupils and 57 teachers; in *St. Croix*, 7 public and 17 parochial schools, 1,905 pupils and 73 teachers; in *St. John*, 5 public schools, 128 pupils and 9 teachers.

The revenue is derived from customs, income tax, ground and building tax, trade tax, &c. The estimated revenue for year ending June 30, 1920, was \$59,405. The administration is

under the Navy Department. There is a regular fortnightly service from New York to St. Thomas, which possesses a powerful wireless installation.

CAPITAL, Charlotte Amalie (St. Thomas) contains one of the finest harbours in the West Indies, accommodating vessels of large draught, and has a large coaling and oil refueling station.

Governor, Rear-Adm. Joseph W. Oman, U.S.N.
Secretary, Lieut. C. C. Timmons, U.S.N.

THE PANAMA CANAL.

The first suggestion for a canal across the Isthmus of Panama was made by a Spanish engineer in 1530, and surveys were actively engaged upon by various private companies between the years 1825 and 1830. In 1876 a concession for the construction of a canal was granted to a French promotion corporation, which conducted surveys during a period of two years, and reported to an international congress held at Paris in May, 1879, over which Ferdinand de Lesseps presided. This congress advised the construction of a canal at sea-level, and in 1881 the work was undertaken by the Universal Inter-oceanic Panama Canal Company, of which de Lesseps was nominal head. After two years of preparatory work, the first excavation was made on January 20, 1882. The amount of work to be accomplished proved to be greater than was estimated, and the conditions under which it was carried on more embarrassing. Sickness, interference of local officials, and mismanagement by the administration in Paris, resulted in the failure of the company, and a receiver was appointed in 1889. Under direction of the French courts a new company was formed to carry on the work, and, after a period of surveys, excavation was resumed in 1894. This was continued until May 4, 1904, when the United States Government took possession of the effects of the French company in Panama.

The interest of the United States in a canal across the Isthmus dates from 1823, and surveys under the auspices of that Government, or of companies organised in the United States, have been made at every available point between the Isthmus of Tehuantepec and the Atrato River. Actual construction, by an American company, of a canal across Nicaragua was begun in 1850, and abandoned in 1853, when the company failed for lack of funds. The failure of this company influenced the United States Government to take an active interest, and a commission was appointed in 1855 to make further studies and investigations. As a result of these investigations, the Congress of the United States authorised the President in 1902 to purchase the effects of the French company in Panama for \$40,000,000. Meanwhile, a treaty was negotiated with the Government of Colombia for the cession, upon payment of \$20,000,000, of the territory through which the canal was to be constructed. The failure of the Colombian Government to ratify this treaty led to the secession of Panama on November 3, 1903. The new Government was immediately recognised by the United States, and a treaty was signed on February 26, 1904, in which rights of sovereignty over a strip of land ten miles in width, extending across the Isthmus, were ceded to the United States. The canal is built through the centre of this territory.

Two years were spent by the United States Government in sanitation, the assembling of plant, and organisation and housing of a labour

* Under the Treaty of Versailles, 1919, the German Samoan Islands were allocated to New Zealand.

force; after which operations on a large scale were begun on all parts of the canal.

Including the purchase of rights, payments to Panama, and construction and operation of the canal and its adjuncts, the total appropriations by Congress to June 30, 1921, were \$443,455,968.02. Revenues and other revenues, from its opening until June 30, 1921, amounted to \$26,466,791.78. During the past two years they have averaged approximately \$20,480,000 a year, or about \$20,500,000 a month.

The canal is fifty statute miles long (43.84 nautical miles), and the channel is from 300 to 1,000 feet wide at bottom. The least width is in Culebra Cut, and the greatest is Gatun Lake, where the channel can be made much broader at any time by the cutting down of trees and a small amount of dredging. The water depth when the surface of Gatun Lake is at 8½ feet above sea-level varies from 8½ feet in some parts of Gatun Lake to 41 feet in the Atlantic entrance. The depth through Culebra Cut is 45 feet.

There are three essential parts: a lake formed by damming the Chagres River, and two channels leading from the Atlantic and Pacific Oceans to this lake. The surface of the lake is normally at 8½ feet above sea-level, and the channels connecting it with the sea are at sea-level. Ships are lifted from the sea-level channels to the lake, or lowered from the lake to sea-level in locks. These locks have a usable length of 1,000 feet, width of 120 feet; least depth of water over the sills when lake is at normal level, 41½ feet. These dimensions limit the size of ships using the canal. The dam which forms the lake is situated at Gatun, about seven miles inland from the Atlantic. It is built of earth, with an impermeable core of fine sand and clay, and is 1½ miles long, half a mile wide at bottom, and 100 feet at the top, which is 105 feet above sea-level. The lake is known as Gatun Lake, and is 164 square miles in area. At its southern end is Culebra Cut, the channel through the continental divide. This is the most extensive excavation ever made. The French canal builders dug about 18,600,000 cubic yards out of this section of the canal, and the Americans have completed an excavation that amounts to over 130,000,000 yards. The total excavation for the whole canal is about 266,000,000 cubic yards,

about 130,000,000 yards of which have been excavated in the dry and the balance by dredges. The amount of concrete used in the locks is 4,500,000 cubic yards.

The administrative organisation for the canal is known as "The Panama Canal," with the Governor of the Panama Canal (Col. Jay J. Morrow, U.S.A., retired) at its head. The Governor reports to the President, who has delegated the Secretary of War to have supervision over the canal for him. The Governor of the Panama Canal is President of the Panama Railroad.

In connexion with the construction and operation of the canal, extensive terminal and supply facilities have been constructed at both the Atlantic and Pacific entrances. These include marine and general repair shops, foundries, dry docks, five 1,000-foot steel and concrete piers, and a number of wharves, slaughter-houses, cold storage plants, ice plants, laundries, hospitals, coaling plants, fuel oil tanks and delivery plants, waterworks, commissary stores, storehouses of spare materials and ships' chandlery stores, and other accessories of great modern ports. An extensive transfer of cargo goes on at the Atlantic terminus of the canal, between ships plying the Atlantic and the Caribbean and ships which pass through the canal to or from Pacific ports. The 1,000-foot dry dock, with adjacent repair shops, at Balboa is an important assistance to shipping throughout the American tropics as well as a base for repairs for vessels of the Navy.

Health conditions are excellent, while the scenery is varied and attractive, with ruins of old Spanish towns and fortifications. Gatun Lake is studded with islands and surrounded by mountains. Shooting and tarpon fishing are excellent. The U.S. Government operates hotels at Colon and Ancon.

The number of commercial vessels passing through the canal in both directions in the fiscal year ending June 30, 1921, was 2,898, with a cargo tonnage of 11,599,124 tons, of 2,240 pounds. The total of commercial ships passing through the canal in the first seven years of its operation, from August 15, 1914, to August 15, 1921, was 13,416, of 45,869,942 net tons, Panama Canal measurement, carrying 51,578,920 tons of cargo.

CIVIL LIST PENSIONS, 1920-21.

A list of Pensions granted during the year ended March 31, 1921, under the provisions of the Civil List Act, 1910.

Mrs. EDITH BULLEN, in recognition of her husband's work as a scholar and critic	£200
W. H. DAVIES, poet (addition to previous pension of £100)	£50
Mrs. FREDERICK ENOCK, in recognition of her husband's services to natural science and entomology	£100
EDWARD GREENLY, Geological Survey of Anglesey	£80
Mrs. J. A. MCCLELLAND, in recognition of her husband's distinguished services as an investigator in physical science	£100
Mrs. and Miss SHARMAN, in recognition of Mr. George Sharmar's valuable services in paleontological science	£80

FREDERIC VILLIERS, war correspondent and war artist	£100
JOHN NUGENT FITCH, in recognition of his long services to the cause of botany, horticulture, and natural history	£75
W. R. HODGKINSON, scientific work	£100
MORTON LUCE, author and poet	£70
PITTENDRIGH MACGILLIVRAY, sculptor	£75
MISS MABEL SCOTT, in recognition of her father's services to historical studies	£70
Mrs. W. J. M. STARKIE, in recognition of her husband's services to classical scholarship, to literature, and to the cause of education in Ireland	£200
HERBERT TOMLINSON, in recognition of his services as a teacher, and of his valuable and distinguished contributions to physical science	£200
Total	£1,000

The following Articles have been revised under the direction of the various Governments or of the British Representatives at Foreign Courts, to whom the Editor desires to express his warmest thanks. The Editor is also greatly indebted to the Embassies and Legations in London for various corrections and additions.

The Salaries and Allowances of Officers of H.M. Diplomatic, Commercial and Consular Services are fixed in accordance with the scale shown below:—

Salaries and Allowances.

Rank.	Salary	Representation Allowance.	House Rent Allowance.
Commercial Counsellors	£ 1,700	£ 300	£ 250
Commercial Secs., Grade I.		£ 300	£ 250
Insp.-Gen. of Consulates	£ 1,500-1,700	£ 400	£ 250
Consuls-General		£ 300	£ 250
Commercial Secs., Grade II.	£ 800-1,000	£ 250	£ 200
Consuls			
Commercial Secs., Grade III	£ 600-800	£ 200	£ 100-200
Vice-Consuls	£ 300-600	£ 200-250	£ 100-200
		† Foreign Allowance.	Rent Allowance.
Counsellors	£ 1,500-1,700	£ 300-500	£ 300-700
1st Secretaries	£ 800-1,000	£ 250-700	£ 200-700
2nd Secretaries	£ 600-800	£ 150-450	£ 150-400
3rd Secretaries			

† Fixed to meet requirements of the post.

ABYSSINIA or ETHIOPIA.

Empress, Walzeru Zauditu (daughter of late Emperor Menelek), born 1876; elected Sept. 27th, 1916.

Heir, H.H. Ras Tafari Makonnen, G.C.M.G. (Cousin of the Empress).

The area of Abyssinia and its dependencies is estimated at 350,000 square miles, with a total population of 7,000,000, of whom about one-half are Abyssinians and the remainder Gallas, negro tribes on the west and south frontiers, and Danakils and Somalis on the east. The political neighbours are the Sudan, the Italian colony of Masowah (Eritrea), the French colony of Djibuti, British Somaliland, Italian Somaliland, Kenya Colony and the Uganda Protectorate.

Abyssinia is volcanic and mountainous. It contains some mineral wealth; iron and coal are not uncommon, and gold is washed in various streams, while salt, saltpetre, and sulphur are also procurable. The lower country and deep valley gorges are very hot; the higher plateaus are well watered, with a genial climate. In the hotter regions, sugar-cane, cotton, coffee, rubber, &c., flourish; in the middle zone maize, wheat, barley, wild oranges and other fruit trees, tobacco, potatoes, &c., are cultivated; and above 5,000 feet are excellent pastures with some corn cultivation. There are two seasons in the year, a dry winter and a rainy summer from June to September. The chief river is the Blue Nile, issuing from the Taps lake; the Atbara and many other tributaries of the Nile also have their rise in the Abyssinian highlands. Horses, mules, donkeys, oxen, goats, and sheep, and camels in the lowlands, form a large portion of the wealth of the people.

The Abyssinians are Christian (a branch of the Coptic Church), and their kings claim descent from Menelek, the son of Solomon

by the Queen of Sheba. There is no popular literature, and little education. The potential army numbers at least 300,000, armed with rifles. The principal pursuits are agriculture and cattle breeding. The chief exports are coffee, civet, wax, hides, rubber, ivory, and gold. The total trade is valued at about £2,000,000 for imports and exports, but it suffered severely during 1912 from the prevalent depression. The import duty on all goods at Gambela is 10 per cent. *ad valorem*, and at Dire-Dawa and Harrar 8 per cent. *ad valorem*; in the interior the duty is variable, and 3 per cent. addition is imposed on goods brought to the capital. A railway (495 miles) has been built under French auspices from Jibuti to the capital, *via* Dire Dawa. The posts and telegraphs are under French management. The principal towns besides Adis Ababa, are Adwa, the capital of Tigré, Gondar, Debra-Markos, Sailyu, Aksum, Antal, Ankober, Goré, Dembecha, Ijube, Jimma, and Harrar. There are ancient architectural remains at Aksum, Gondar, and Ankober; modern architecture is very poor.

CAPITAL, Adis Ababa (population fluctuates, but is ordinarily about 50,000). Harrar, in Eastern Abyssinia, has a population of about 45,000.

Imports from U.K. (1910) £83,128
Exports to U.K. (1910) 8,986

FLAG: Green, red, yellow.

BRITISH LEGATION.

Envoy Extraordinary, Minister Plenipotentiary and Consul-General, C. F. W. Russell

(1910) £3,400
Vice-Consul & Oriental Secretary, Ph. C. Zaphiro, C.M.G.

Secretary to Minister, M. S. Lush, M.C.

BRITISH CONSULAR OFFICES.

Adis Ababa—Consul, Maj. J. H. H. Dodds, C.M.G.

" *Vice-Consul, C. H. Cane (actg.)*

Harrar—Consul, C. F. Plowman (actg.)

N.W. Ethiopia (Gondar)—Consul, A. D. Home.

Western Ethiopia (Gore)—Consul, C. H. Walker, M.B.E.

S.W. Ethiopia (Magi)—Consul, Maj. E. B. Hawkins, D.S.O.

Southern Ethiopia (Mega)—Cons., Capt. Arnold W. Hodson.

Adis Ababa is 500 miles from Zaila, *via* Harrar; letters from London are from 20 to 24 days in transit if the mail connects with steamer service from Aden; train from Djibouti takes 3 days; caravans take from 25 to 45 days.

AFGHANISTAN (see p. 632).

ALBANIA.

Albania (the former Turkish Provinces of Scutari and Yanina) lies on the west of the Balkan peninsula of south-eastern Europe, the western boundary being the Adriatic; total area about 11,000 sq. miles; total population estimated (1911) at 800,000. The political neighbours are, on the north Montenegro, on the east Serbia, and on the south-east and south Greece. The independence of the country was guaranteed by the Supreme Council of

the Allies, but is now awaiting the decision of the Council. The principal towns are Durazzo (the capital), pop. 5,000; Scutari (pop. 32,000); Elbasan (pop. 22,000); and Tirona (pop. 12,000). Cattle rearing and agriculture (grain and tobacco) are the principal industries and there is some mineral wealth.

Durazzo—Consul, H. C. A. Eyres. (And local allowance, £300), £1,200.

ANDORRA.

A miniature Republic in the Pyrenees, with an area of 175 sq. miles, and a population of 5,500; it is under the joint suzerainty of France and Spain. There is a Council of Twenty-four, elected by certain of the inhabitants, a judge, and two lay vicars appointed by France and the Spanish Bishop of Urgel.

ARABIA.

Arabia is a peninsula in the south-west of the Asiatic continent, forming the connecting link between Asia and Africa, and lies between 30° 30'—60° E. long. and 12° 45'—34° 50' N. lat. The north-western limit is generally taken from Akaba, at the head of the Gulf of Akaba, to a point in the Syrian Desert about 150 miles north-east, and thence northwards to a point about 50 miles due east of Damascus. The remaining land boundaries are in the form of a horse-shoe, encompassing the Syrian Desert, and descending in a south-easterly direction to the head of the Persian Gulf, and thus excluding the whole of Mesopotamia and the Euphrates Valley. The other boundaries of Arabia are the Red Sea and Gulf of Aden, the Arabian Sea, and the Persian Gulf and Gulf of Oman. Generally speaking, the peninsula consists of a plateau sloping from south-west to north-east towards the Euphrates Valley, except that the broad south-eastern promontory, which encloses the Persian Gulf, contains a coastal range in the Sultanate of Oman.

The total area is estimated at 1,000,000 sq. miles (of which nearly one-half is occupied by the Syrian, Nafud, and Dahna deserts), and the total population is believed to be about 5,000,000.

The organization of the Native States of Arabia is to be developed under British auspices, the principal rulers (the King of the Hejaz and the Imam of Yemen) being subsidised under certain conditions (control of foreign relations by British advisers and maintenance of internal peace by native rulers). The various Arab States are shown below:—

THE KINGDOM OF THE HEJAZ.

King of the Hejaz, El Hussein Ibn Ali.

On June 5, 1916, the Grand Sheriff of Mecca (hereditary Keeper of the Holy Places) threw off the Turkish allegiance and declared the independence of the former vilayet of Hejaz. In concert with the British Imperial forces under General Allenby, the armies of the King of the Hejaz (under the leadership of the Emir Feisal) penetrated northward, through the districts E. of the Jordan, to Damascus, and the territories of the new kingdom extend from Asir (see below) in S. to Palestine and Syria in N., and from the Red Sea, the Gulf of Akaba, and Palestine in the W. to the ill-defined boundaries of Central Arabia.

Parallel with the Red Sea coast runs the Tihama range (Jebel Shar, or Mount Seir, 7,000 feet, and Jebel Radhwa, 6,000 feet). On

the coast are the small ports of Muwela, Damgha el Wijn, Yambo, Rabigu and Jeddah (the chief port of the country and the pilgrims' port), which contains the reputed "tomb of Eve, the mother of mankind"; and inland are many settlements through which runs the Hejaz Railway. The Oasis of Khaibar, east of the railway, contains a considerable population, descendants of former negro slaves, with a Jewish centre at Kasr el Yahudi. The importance of the Kingdom of the Hejaz depends upon the pilgrimages to the holy cities of Medina and Mecca. Medina (*Al Medina*, "The City"), 200 miles by rail from Damascus, and the present terminus of the Hejaz Railway, has a permanent population of about 20,000, and is celebrated as the burial place of Muhammad, who died in the city on June 7, 632 (12 Rabi'a, A.H. 12). The Mosque of the Prophet (500 feet in length and over 300 in breadth) contains the sacred tomb of Muhammad. Mecca, the birthplace of the Prophet, is 55 miles east of the seaport of Jeddah, by road, and about 200 miles south of Medina, and has a fixed population estimated at 60,000. The city contains the great mosque surrounding the Kaaba, or sacred shrine of the Muhammadan religion, in which is the black stone "given by Gabriel to Abraham," placed in the south-east wall of the Kaaba at such a height that it may be kissed by the devout pilgrim. Jeddah, the principal port, has a considerable trade in hides, mother-of-pearl, coffee and carpets.

The Hejaz Railway runs from Medina in S. through the Syrian Desert to Damascus and Beirut, and is connected with the projected Baghdad Railway at Aleppo. The total area under the rule of the King of the Hejaz is about 225,000 sq. miles, with a population of from 350,000 to 400,000, including many nomad tribes.

CAPITAL, Mecca (pop. 60,000).

THE EMIRATE OF NEJD AND HASA.

Emir, Abd-el-Aziz es Saud, K.G.C.E.

This former vilayet was in the 18th century an independent Empire of the Wahabites, and has reasserted its autonomy under a representative of the former dynasty. It is known as "the true home of the Arab," and extends across the oases of Central Arabia, from the eastern boundary of Hejaz to the Persian Gulf. During military operations in 1913, the Emir of Nejd captured Hufuf (the capital of El Hasa), and extended his rule over the former Turkish province of El Hasa. The capital, Riyadh, is a station on the Pilgrims' trans-Arabian caravan route from El Hasa to Mecca, and contains a large mosque, the "Westminster Abbey" of the Wahabi Moslems. The principal trading centre is Anazla, in the central province of Qasim (Nejd). The principal port on the Persian Gulf is El Katif, on Bahrain Bay (El Hasa).

THE PRINCIPALITY OF KOWEIT.

Ruler, Sheikh Salim Ibn Mubarak, C.S.I.

Koweit has been semi-independent for many years, and is in treaty relation with British India. It extends along the shore of the Persian Gulf from Mesopotamia to Nejd (El Hasa). The important harbour and gulf port of Koweit, the capital (pop. 25,000), is an entrepôt for goods for the interior, and for the export of horses, pearls, dates, wool, &c. It was designated as the terminus of the Berlin-Constantinople-Baghdad railway as originally projected in 1902. Political Agent, Major J. C. Mora, B.S.O.

THE SULTANATE OF OMÂN.

Sultan, Seyyid Taimur bin Faisal, born 1886, suc. 1923.

Omân (area 82,000 sq. miles, estimated pop. 550,000) is a Muhammadan State in S.E. Arabia with a coast-line of about 1,500 miles along the Persian Gulf, the Gulf of Omân, and the Arabian Sea from El-Katar to Ras Sair. The country, much of which is arid and desert, attains in Jebel Akhdhar an elevation of 12,000 feet. The population is chiefly Arab, but includes also a considerable foreign element—Indians, Persians, Baluchis and Swahili negroes. The Sultan is in treaty relations with, and subsidised by, the Government of India, who have a political agent at his capital. In 1923, at the end of the reign of the last Sultan, the tribes of the interior rose in rebellion, and, having elected their own Imam or Spiritual Ruler, have since administered the whole of Omân proper, the efforts of the Sultan to establish his control having been, up to date, unsuccessful. This rebellion has, with the war, interfered with the prosperity of the country. The Sultan is pledged not to cede territory to any Power but the British Government. Muscat has a considerable trade, amounting in 1916-17 to £200,000, and in 1917-18 to £223,925, a decrease owing to interior disturbances due to the war. Dates are the chief export, and rice, wheat, coffee, cotton and silk goods the chief imports. The capital, Muscat, has an estimated population of 24,000.

British Consul and Political Agent, R. E. L. Wingate.....per mensem Rs. 2,250

THE EMIRATE OF JEBEL SHAMMAR.

Emir, Abdullah ibn Mitab or Rashid.

Jebel Shammar is a Bedouin community of Central Arabia, extending across the oases from Hejaz on the west to Koweit on the east, with Nejd as a southern neighbour. Its boundaries are indeterminate, and the total population in allegiance to the Emir is believed to be about 200,000. The capital is Hail, between the two Shammar ranges (Jebel Aja and Jebel Salma) with a population of about 12,000.

THE IMAMATE OF ASIR.

Imam, Muhammad Hamid ed-Din.

The territory of the Idrisi (who claims the Imamate of Asir and part of Yemen), extends along the Red Sea littoral, approximately from Hali Point to Lohela. It includes part of Asir, part of Yemen and the Farsan Islands, and extends inland to the Dahna Desert. The maritime lowland is interspersed with fertile areas near the wadis, which afford pasturage and bear grain. The capital is Sabia, a small inland town.

THE IMAMATE OF YEMEN.

Imam of Sana'a, Yahya Muhammad Hamid ed-Din.

Yemen occupies the S.W. corner of the Arabian peninsula, between the Imamate of Asir and the British dependency of Aden, with an estimated area of 74,000 sq. miles and a population of 600,000 to 700,000. It was formerly divided into the vilayets of Sana'a, Taiz, Asir and Hodeida, and it extends inland to the Dahna Desert and to the tribal territories of Hadramut. Part of Yemen is now included in the territories of the Idrisi (Imam of Asir), and of the remainder the greater part is under the rule of the Imam of Sana'a. On the plateau

between the coast and the Dahna Desert (a district known as *El Jebel*) are the most fertile parts of Arabia, where wheat, barley, millet and coffee are extensively grown. The sea port of *Mocha* has become associated with the coffee export trade, but in this trade (and in all others) it is of secondary importance to *Hodeida*. The trade of Yemen probably exceeds that of the remainder of Arabia. The capital is the walled city of Sana'a (pop. 20,000), and about 70 miles to the S. of the capital is Dhamar, an ancient seat of learning, and the headquarters of the Zaidi sect of the Muhammadans.

THE HADRAMUT TRIBES.

The coastal region of Southern Arabia, between Yemen and Aden on the west and Oman on the east, and extending inland (northwards) to the Dahna Desert, contains a coastal strip of some 550 miles. Parallel with the coast (at a distance of 30 miles from the Arabian Sea) is an extensive plateau inhabited by the Hadarim, an ancient people of Arabian stock (Hadoram was the son of Joktan, *Genesis* x., 27). There are many settlements on the coast and in the interior, but the latter are being steadily enveloped by the sand of the northern desert. There are sacred shrines near Kamm (Kabr Hud) and Shibam (Kabr Sâlih). The eastern districts, known as Mahra and Gara, are very sparsely populated. The estimated area of Hadramut is 82,000 sq. miles, and its Muhammadan population, of independent Apab tribes, is estimated at 150,000. The most important Coastal Chief is the *Sultan of Shahr and Mokalla*, K.C.I.E., who is in treaty relations with Great Britain. Inland, the most important tribe is the Kathiri, whose chief towns are Sey yem and Terim. The Kathiri are noted as travellers and traders, and many of them are settled and carry on commerce at Singapore and Java. A long-standing feud between the Kathiri and the Ka'tti (by whom the former were expelled from the coast) was settled by treaty in 1922 on the initiative of the Aden Government. Under this Treaty the Ka'tti *Sultan of Mokalla* permits access to the port of Mokalla on the part of Kathiri traders. Agriculture and cattle raising are the principal industries, together with the cultivation of dates, indigo and tobacco.

ARGENTINE REPUBLIC.

President (1926-1928), Hipólito Irigoyen, assumed office Oct. 12, 1926.....\$96,000
Vice-President (1928-29), Benito Villanueva 36,000

Minister of the Interior, Dr. Ramon Gomez.
Foreign Affairs, Dr. H. Pueyrredon.
Finance, Domingo Salaberry.
Justice and Public Instruc., Jose Salinas.
Agriculture, Alfredo Demarechl.
War, Dr. Julio Moreno.
Marine, Rear-Adm. Tomás Zurueta.
Public Works, P. Torello.

Minister in London, Señor Don Dr. J. Evaristo Uriburu, 26, Park Lane, W. 1.
Counsellor, Señor Don Paulino Llambi Campbell.
Counsellor of Legation, Señor Don Luis H. Dominguez, 2 Palaces Gate, W. 2.
Secretary, Señor Don Carlos Miguens.
Naval Attaché, Comm. Leon I. Scasso.
Financial Secretary, Señor Don Carlos Domínguez.

Consul-Gen., Dr. Bergio Garcia Urriburn, 123 Oxford Street, W. 1.
Asst. Consul, Don Saul Aguilar.

There are also Consulates at Liverpool, Southampton, Cardiff, Manchester, Newcastle-on-Tyne, Newport, and Glasgow.

Argentina is a wedge-shaped country, occupying the greater portion of the southern part of the South American Continent, and extending from Bolivia to Cape Horn, a total distance of nearly 3,300 miles; its greatest breadth is about 930 miles. It is bounded on the north by Bolivia, on the north-east by Paraguay, Brazil, and Uruguay, on the south-east and south by the Atlantic, and on the west by Chile, from which Republic it is separated by the Cordillera de los Andes. On the west the mountainous Cordilleras, with their plateaus, extend from the northern to the southern boundaries; on the east are the great plains, those in the north are thickly wooded and are known as *El Gran Chaco*, and further south lie the treeless pampas, which together constitute *La Plata*, extending from the Bolivian boundary in the north to the Rio Negro; and south of the Rio Negro are the vast plains of Patagonia. Argentina thus contains a succession of level plains, broken only in Cordoba by the San Luis and Cordoba ranges, and in the north-western states by the eastern spurs of the Andes. The Paraná River, formed by the junction of the Upper Paraná with the Paraguay River, flows through the north-eastern states into the Atlantic, and is navigable throughout its course; the Pilcomayo, Bermejo, and Salado del Norte are also navigable for some distance from their confluence with the Paraná. In the Province of Buenos Aires the Salado del Sud flows south-east for some 300 miles into Samborombon Bay (Atlantic). In the south the Colorado and Rio Negro rise in the extreme west and flow across the pampas into the Atlantic, many similar streams in Patagonia (notably the Chubut and Santa Cruz) traversing the country from the Andes to the Atlantic.

The Republic is composed of 14 provinces and 20 territories, comprising in all about 1,132,000 square miles, with a population of 3,462,030 in 1919. Immigration is encouraged, and comes principally from Spain and Italy, but legislation, introduced in 1919, requires intending immigrants to produce certificates of good character and ability to work. The climate is moderate and healthy. Spanish is the language of the country.

Government.—The estuary of La Plata was discovered in 1515 by Juan Diaz de Solis, but it was not until 1534 that Pedro de Mendoza founded Buenos Aires. In 1820 Spanish rule was overthrown, and in 1828 the independence of Argentina was complete, although not acknowledged by Spain until 1829. In 1833, after more than thirty years of disturbances and civil wars, the country settled down, and is now a well-governed and progressive Republic. The constitution dates from 1853 (revised 1899) and is modelled on that of the U.S. of America, but each province enjoys practically complete autonomy. The executive is in the hands of the President, who selects his Cabinet. The National Congress consists of a Senate of 30 members and of a House of Deputies of 160 members. Members of Congress receive \$9,000 per annum.

Production.—Of the total area about one-third is suitable for agriculture and cattle raising, and vast tracts are held by the Federal Government

for sale or lease to colonists. The principal productions are wheat, maize, oats, linseed, sugar, wine, wool, hides, cattle, sheep, and horses. The yield of the harvest of 1920-21 was 5,122,000 tons of wheat, 1,090,000 tons of linseed and 864,000 tons of oats; there were in 1924 25,866,763 cattle, 43,225,425 sheep, 3,325,825 horses, 565,429 mules, 4,325,280 goats and 2,900,525 pigs, the total value being placed at £130,000,000. The export of frozen beef and mutton is an important industry. The exports are made up entirely of pastoral and agricultural products, with the exception of quebracho, copper, manganese, and wolfram. In 1920, there were 4,500 registered wine presses, handling about 600,000 tons of grapes, the output in 1919 being over 4,000,000 hectolitres (88,212,000 gallons). The export of wine to neighbouring South American States is increasing annually, and the importation of wine has almost ceased.

Communications.—There were (1919) 22,121 miles of railroad open. The railroads are almost entirely in the hands of British companies, and absorb about £150,000,000* of British capital. Telegraphs about 43,153 miles, mostly Government lines. There are 22 wireless stations, of which one is reserved for communication between England and the Argentine. The principal ports are Buenos Aires, Rosario, La Plata, and Bahia Blanca. The number of steam and sailing merchant vessels which entered Argentine ports in 1918 was 10,868 of a total tonnage of 8,907,731. Of these 1,818 were ocean-going vessels of an aggregate tonnage of 3,393,954.

Defence.—The Navy consists of 2 super-Dreadnought battleships, 2 river monitors, 4 armoured cruisers, 3 cruisers (old), 4 torpedo gunboats, 7 destroyers, and a first class and 6 second class torpedo boats. Strength about 5,000 men. There is a naval post at Bahia Blanca. The National Militia has a peace footing of about 30,000, with reserves of 250,000; on a war footing the Army would comprise 5 divisions of 20,000 each.

Education.—Primary Education is secular, free and nominally compulsory from the ages of 6 to 14, but only some 45 per cent. of attendances are secured. Secondary Education is controlled by the Federal Government in lycæums and normal schools, with an average attendance of 6,000. There are also *Special Government Schools*—1 naval, 1 military, 1 mining, and 1 agricultural. There are *National Universities* at Cordoba and Buenos Aires, and *Provincial Universities* at La Plata, Santa Fé, and Paraná.

	1919.	1920.
Revenue	£33,168,556	41,866,000
Expenditure	32,997,000	42,154,000

ARMENIA.

Armenia occupies the uplands between the Iranian plateau and Asia Minor, and is bounded by the Black Sea and the Republic of Georgia on the N., by Kurdistan on the S., by the Republic of Azerbaijan on the E., and by Turkish Asia Minor on the W., and until the outbreak of the War of 1914-18 it was shared between Turkey (35,600 sq. miles), Russia (20,587 sq. miles), and Persia (6,528 sq. miles). The country possesses great historical interest as the reputed seat of the oldest civilised people in the world. The inhabitants have always possessed definite racial characteristics, but have seldom been politically independent, the country having been held successively by the Medes, Persians, Greeks, Romans, Arabs, and Turcoman-Tartars until 1514-1538, when the greater part became a province of the Ottoman Empire. The Eastern part remained under Persian rule, but in 1828 Russia obtained the larger share of non-Turkish Armenia. The rivers Euphrates, Tigris, Aras, Kur, and Tchorokh take their rise within its boundaries, and at the meeting of the former Turkish, Persian, and Russian boundaries is Mount Ararat (17,150 feet), the traditional resting place of "Noah's Ark." In the uplands the climate is severe, but in the valleys and plains the soil is fertile,

producing all kinds of cereals, cotton, rice, sesame, hemp, flax, and tobacco. Sericulture (silkworm breeding), sheep-breeding, and fruit growing are capable of great development. Armenia has great mineral resources hardly as yet developed. Naphtha, sulphur, bitumen, and nitre abound, while the mountains yield salt (mineral and in solution), gold, silver, copper, lead, iron and valuable marbles; there are also numerous hot and cold mineral springs (similar in nature to those of Vichy). The Armenian Church is the oldest established Christian church, Christianity having been recognised as the State religion in 300, and from the 5th century there is a national language and literature. On account of their religion the Armenians have suffered a general persecution by Islam, particularly in the vilayet of Sivas, Bitlis, Diarbekir, Mamuret-el-Aziz, Van, and Erzerum, where massacres have frequently been organised with a view to extermination. In 1915-17 there were wholesale deportations and massacres of the Christian population of Turkish Armenia, while the Armenian Christians of Azerbaijan and of Russian Armenia were similarly treated by Turkish and Kurdish hordes. In 1918, during the Russian Revolution, an independent "Republic of Trans-Caucasia" was formed by the union of Georgia, Armenia, and Azerbaijan, and on the dissolution of the union (June 1, 1918) the Supreme Council of the Allied Powers recognised the independence of the Republic of Armenia (area, 20,587 sq. miles, population 2,000,000). Under the Treaty of Peace with the Allies (May 21, 1920), Turkey recognised the independence of Armenia, with its capital at Erivan. The United States Government was requested by the Allies to accept a mandate for Armenia, but the Foreign Relations Committee of the Senate has declined the mandate. American Representative in London, Maj.-Gen. Bagratuni.

AUSTRIA

(Oesterreich).

President of the Federation, (Nov. 20, 1920), Dr. Michael Hahnisch.
 Chancellor and Minister of Foreign Affairs, J. Schober.
 Interior, Dr. Leopold Waber.
 Education, Walter Bretsky.
 Finance, Dr. Alfred Guertler (R).
 Justice, Dr. Rudolf Paltauf.
 Agriculture and Forestry, Dr. Leopold Henner.
 Social Welfare, Dr. Franz Pauer.
 Commerce, Public Works, and Food Control, Dr. Alfred Grünberger.
 Railways, Dr. Walter Rodler.
 War, Col. Wächter.

Minister in London, Baron George Frankenstein, 18 Belgrave Square, S.W. 2.
 First Secretary, Adolph Kunz.
 Press Attaché, Dr. Maximilian Bach.
 For Debt Clearing, Dr. Felix Weiser.

Prior to the War the Austrian Empire, joined to the Kingdom of Hungary by the identity of sovereigns, was the largest Empire, next to Russia, on the continent of Europe, situated between 48°-51° N. lat. and 9° 30'-26° 20' E. long. It embraced an area of 240,455 sq. miles, and a population (1914) of nearly 52,000,000, and included Upper and Lower Austria; Bohemia; Bukovina; Carinthia, Carniola, Dalmatia, Gips and Gradiška; Istria, Moravia, Salzburg, Silesia,

Styria, Trieste, Tyrol and Vovariburg; with Bosnia and Herzegovina as administered territories. At the conclusion of the War, the territories of the Austrian Republic comprised an area of 31,795 square miles, with a population (1900) of 6,667,000.

On June 28, 1914, the assassination of the Austrian Archduke Francis at Serajevo (Bosnia) was presumed to be the outcome of a plot fostered by Serbia, and after negotiations an ultimatum was presented by the Empire to the Serbian Government (July 23), and non-compliance with its terms led to the European War of 1914-18. Before the armistice of Nov. 11, 1918, Hungary had seceded from the "Dual Monarchy," and a Republic was declared Nov. 12, 1918, the throne being abdicated by the Emperor Karl (Nov. 26, 1918).

Under the Treaty of St. Germain (Sept. 10, 1919) the political neighbours of the Austrian Republic are the Republics of Germany and Czecho-Slovakia on the N.; the Kingdom of Italy, and the Yugo-Slav Kingdom on the S.; Switzerland on the W., and Hungary on the E.

Under the new Constitution (Nov., 1900), Austria became a Republican Federation of eight Provinces:—Lower Austria and Vienna, Upper Austria, Carinthia, Styria, Salzburg, Tyrol, Vorarlberg and Burgenland (West Hungary); the Bundesrat and Nationalrat were constituted; a government formed, and a President elected. The elections resulted in a majority for the Christian Socialists over the Social Democrats, the Pan-Germans coming next in order. In June, 1921, the Ministry resigned in favour of a non-party Government. There is a considerable body of opinion in favour of the inclusion of Austria in the German Reich, and on the other side, for a close alliance with Hungary.

Complete religious liberty is one of the fundamental laws of the new Republic. In 1915 the prevailing religion of the German-speaking people was Roman Catholic.

Finance.—Before the War Austria had a total indebtedness of about 14,400,000,000 crowns (£600,000,000), towards the annual cost of which (480,000,000 crowns) Hungary made a contribution of 61,000,000 crowns (24=£1 sterling). The indebtedness was increased by War credits (up to June 30, 1918) to £5,800,000,000, requiring an annual service of 4,335,000,000 crowns. The pre-war revenue was about 3,600,000,000 crowns (£150,000,000). The Budget of 1900-21 provided for receipts of 25,000,000,000 crowns, and for expenditure of 50,000,000,000 crowns, showing a deficit of 25,000,000,000 crowns; but by the middle of the year the deficit had reached 50,000,000,000. The rate of exchange, crowns to £ sterling (24=£1 before the War) was 2,400 to 3,000 to £1 in August, 1921. The Austrian section of the Reparation Commission made an exhaustive examination of the resources of the country and, in May, 1921, a special commission of the League of Nations visited the country and made far-reaching proposals for financial reconstruction. Since the Armistice (Nov. 11, 1918), the British Government has advanced about £10,000,000 to the Republic.

Industries.—The principal industry is agriculture, the chief products being wheat, barley, oats, rye, maize, and potatoes. Forestry and stock raising are important. The forests are principally coniferous trees. The live-stock includes horses, cattle, sheep, pigs and goats. The vine is extensively cultivated. Among the

minerals produced are common and brown coal, iron, lead, zinc, silver and copper. The principal manufactures are woollens, cottons, glass, steel, wood-work and brewing.

Communications.—In Sept., 1922, there were about 3,800 miles of railway (exclusive of narrow gauge lines). The mercantile marine was considerable in 1924, but the new Republic is land-locked.

Commerce.—The Commerce of the "Common Customs Territory" of the Dual Monarchy of Austria and Hungary amounted in 1913 to £140,000,000 for Imports and £115,000,000 for Exports, of which totals £5,000,000 (Imports from) and £7,000,000 (Exports to) represented the exchange with the United Kingdom. The British trade with Austria was very small in 1921. Austria has free railway access to the seaport of Fiume in the neutral zone (see Yugo-Slavia), but no ports of her own.

Defence.—During the War of 1914-18 about 5,000,000, all ranks, were passed into the common Army of Austria-Hungary. The total casualties exceeded 2,500,000, of whom over 700,000 were returned as killed. Under the Treaty of St. Germain the military, naval and air forces were demobilised and reduced to minimum requirements and all warships were surrendered to the Allies, those under construction being broken up. Service in the Republican Army is by voluntary enlistment for twelve years.

Towns.—Vienna, the capital, is situated on the River Danube; in 1919 it contained an estimated population of 2,000,000. Other large towns are Grätz (277,000), Linz (93,000), and Innsbruck (60,000).

Consul, Glasgow, F. S. Dunn, C.B.E.

A Kingdom of Central Europe, with a total area (1900) of 11,392 square miles and a population (Census of 1909) of 7,577,027. Belgium is bounded on the N. by the Kingdom of the Netherlands, on the S. by France, on the E. by Germany and Luxemburg, and on the W. by the North Sea. The kingdom formed part of the "Low Countries" (Netherlands) from 1815 until Oct. 24, 1830, when a National Congress proclaimed its independence, and on June 4, 1831, Prince Leopold of Coburg was chosen hereditary king. The separation from the Netherlands and the neutrality and inviolability of Belgium were guaranteed by a Conference of the European Powers, and by the *Treaty of London* (April 19, 1839), the famous "Scrap of Paper," signed by Austria, France, Great Britain, Prussia, the Netherlands, and Russia. On Aug. 2, 1914, the Germans invaded Belgium and ultimately overcame the resistance of the fortresses and overran almost the whole country. In revenge for the heroism of its defenders the Germans sacked and destroyed many cities, burning Louvain (with its library), Termonde, and other places, and established a reign of terror. They levied a war contribution on Belgium of close on £100,000,000, apart from enormous fines on localities, firms, and private persons. On Friday, Nov. 13, 1918, at the great turn of the tide, Antwerp was re-occupied by the victorious Belgian army, and Brussels and the remainder of Belgian soil a few days later. About 10,000 persons were added in 1919 by the cession of Moresnet and part of Malmédy by Germany, and the district of Eupen, with the remainder of the district of Malmédy, were ceded by Germany and annexed by Belgium (Sept. 20, 1920) after a plebiscite, thus adding a further 50,000 to the inhabitants.

French and Flemish are the joint official languages, but while French is the language of the upper classes, Flemish is spoken by the majority, preponderating in Flanders, Limburg, and Brabant, including Antwerp. Nearly all the inhabitants are, at least nominally, Roman Catholics.

Belgium has a frontier of 821 miles, and a seaboard of 42 miles. The Meuse and its tribu-

tary the Sambre divide it into two distinct regions, that in the west being generally level and fertile, whilst the table-land of the Ardennes, in the east, has for the most part a poor soil. The "polders" near the coast, which are protected by dikes against floods, cover an area of 193 sq. miles. The highest hill, Baraque Michel, rises to a height of 2,250 feet, but the mean elevation of the whole country does not exceed 535 feet. The principal rivers are the Schelde (Escaut) and the Maas (Meuse). Brussels has a mean temperature of 50° F. (summer 65°, winter 37°).

GOVERNMENT.—The constitution jointly vests the legislative power in the King, the Senate, and the Chamber of Representatives. The 120 senators (with the exception of 27 elected by the provincial councils) and 186 representatives are elected by the people, the former for eight, the latter for four years. Universal male suffrage, with plural voting up to three votes by property and educational qualifications, was introduced by the Electoral Law of 1894, proportional representation being secured by an Act of 1900. In April, 1919, the Belgian Parliament decided as an emergency measure to hold 1919 elections on a "one man one vote" basis for Senate and Chamber. (Unmarried widows of soldiers killed before Jan. 1, 1919, or failing widows, the mothers; widows or mothers of civilians shot by enemy; women imprisoned by enemy for patriotic acts, also voted.)

This Parliament, anomalous, and constitutionally elected, was required to make constitutional the machinery by which it was elected; i.e., to revise article 47 of the Constitution. This has not yet been done (Oct. 1920), but it is unlikely that the outworn method of plural voting will ever again be resorted to.

Deputies receive 4,000 francs a year and a free pass over the railways. There are in addition representative Provincial and Communal Councils, elected on a somewhat more liberal franchise.

PRODUCTION.—Agriculture and forestry are important industries, the chief crops being oats, rye, wheat, potatoes, barley and sugar-beet. Under Annex IV. of the *Treaty of Versailles* Germany undertook to deliver to Belgium certain live stock to replace the animals seized or destroyed during the War of 1914-1918. Belgium is essentially a manufacturing country, and it is largely dependant upon foreign supplies for its food. The mineral kingdom yields coal, iron, zinc, lead, and copper. The leading industries are collieries, quarries, and metallurgic (Mons, Charleroi, Liège, Namur, Hainaut, and Brabant), glass, textiles (Verviers), lace (Brussels, Mechlin, Bruges, &c.), flour and starch mills, sugar, distilleries, breweries, &c.

DEFENCE.—In 1914 the *Army* on a peace footing consisted of about 50,000, all ranks. In the War of 1914-1918 over 500,000 passed into the armies, which were reorganised on French territory during the defensive period of the campaigns. An organised force of 200,000 co-operated with the Allies during the decisive offensive of the autumn of 1918. Those returned as dead or missing, during the War, numbered 200,000. Belgium has no Navy.

EDUCATION.—Schools are maintained by communal taxation, with provincial and State grants, while many are under ecclesiastical control, Roman Catholic largely predominating. There are 134 State high schools, including 44 for girls, and numerous private institutions. Special

schools abound. The Universities of Ghent and Liège are maintained by the State; those of Brussels and Louvain are free institutions. Louvain University is to be rebuilt.

	1921.

Ordinary Expenditure	3,202,420,522
Extraordinary Revenue	1,622,274,000
Extraordinary Expenditure	3,127,525,765
Deficit (1921)	2,112,875,235
Reparations due (1921)	1,462,813,250
Debt (Sept., 1920)	12,000,000,000
Imports (1920)	11,171,467,474
Exports (1920)	2,708,021,535
Imports from U.K. (1920)	2,68,525,682
Exports to U.K. (1920)	44,925,202

From 1914-19 loans of 2,170,525,448 francs were advanced by France, £78,524,613 by Great Britain, and \$240,643,000 by the United States.

The chief imports in 1919 were: manufactured articles (1,809,080,406 francs), raw materials (1,789,141,567), foodstuffs and beverages (1,322,697,478), and live animals (138,536,502); the chief exports were: raw materials (946,866,363 francs), manufactured articles (830,658,287), and foodstuffs and beverages (508,110,512).

COMMUNICATIONS.—In 1912 there were 4,719 kilometres of railway (including branch lines and 350 kilometres of private lines rented by the State); by Jan. 1, 1920, almost the whole length destroyed during the War had been repaired or relaid. In 1914 there were 44,964 kilometres of telegraph wire and 2,295 offices; in 1919, 24,397 kilometres had been restored and the 2,295 offices re-opened. In 1920, the post office had resumed full operations. The navigable rivers and canals have a length of 2,179 kilometres (1911), and there are 9,757 kilometres of roads. Most of the maritime trade of Belgium is carried on in foreign bottoms, the mercantile marine only consisting (1912) of 205 vessels (221,637 tons), in addition to which there were 453 fishing boats. In 1912, 9,268 foreign vessels entered at Belgian ports (tonnage 24,497,202). The principal port and commercial entrepôt is Antwerp, on the River Scheldt. Other ports are Ostend, Ghent, Bruges, Neuport, Blankenburg and Zeebrugge (blocked by the British Fleet April 23, 1918, and since re-opened for traffic). The vexed question of the Scheldt, of which the right bank is in Netherlands territory and the left in Belgium, appears likely to be settled by negotiation between the respective Governments. The navigation is to be free to both countries, from the mouth to Antwerp, and the Netherlands war vessels are to be removed from the river.

The Capital, BRUSSELS, had a population in 1912 of 175,809 (with suburbs, 756,637 inhabitants). Other towns with over 100,000 inhabitants are Antwerp, the chief port (312,224 with suburbs, 412,917); Ghent (167,477), which has large cotton and flax spinning mills, and is the second port of importance after Antwerp, while its flower shows are famous; and Liège (170,624) the centre of the iron industry. Brussels is 224 miles from London; transit, 2 hrs.

THE BELGIAN CONGO.

The Independent State of the Congo became a Belgian Colony by a law of Oct. 18, 1908.

The total area amounts to 909,654 sq. miles, with a native population estimated at 5,000,000 to 7,000,000. The total European population (Jan. 1920) was 6,971, of whom 3,500 were Belgians, 818 were British, 239 Americans, 298 Italians, 657 Portuguese, 87 Swedes, 53 Russians, 123 French, 123 Dutch, 75 Swiss, 308 Greeks, 22 Luxemburgers, 21 Danes, 14 Norwegians, and 11 Spaniards.

The Congo River is navigable for large vessels from its mouth at Banana to Matadi (95 miles), where the European steamers discharge and re-charge their cargo; but between that place and Leopoldville, on Stanley Pool, there occur rapids and falls which have been avoided by a railroad 249 miles in length. A narrow-gauge line runs from Lukula to Boma, the cocoa planting district of Mayumbe. Above Leopoldville the river and its numerous affluents are navigable by steamer for about 5,000 miles, the falls on the Upper River being avoided by a metre-gauge line from Stanleyville to Ponthierville (125 kilometres), and another from Kindu to Kongolo (325 kilometres). Another line from Kabalo to Albertville on Lake Tanganyika (273 kilometres) was completed in 1916, connecting the West Coast of Africa with Belgian East Africa and the East Coast. The Katanga Railway reached Bukama in May, 1918, thus linking up the Rhodesian Railway system with the steamers plying on the Upper Congo River, connecting with both the East and the West Coast. Within eight years, 450 miles of railway have been constructed, 200 of which have been laid during the war. It is now possible to travel by train direct from Cape Town to the river Congo, a distance of 2,650 miles. Work has been started on the Stanleyville-Lake Albert Railway, which will run between the Congo River and the Nile, providing the last link to direct river and rail communication between the Cape and Cairo. Two new lines will run from the copper mining district of Katanga towards the West Coast, one of them reaching Lobito Bay (Portuguese Angola), the other linking the Katanga Railway with the Matadi-Leopoldville Railway. A telegraph line connects Banana to Coquilhatville (224 miles); Boma with Tshela (82 miles); Stanleyville with

Pontherville (99 miles); Kaseongo with Uvira (265 miles); Kiada with Kongolo (229 miles); Kabolo with Albertville (269 miles); and Sakania with Bukama (498 miles), a total length of 2,160 miles. There is telegraphic communication with Europe. Fifteen wireless stations connect the West Coast with the principal Government stations throughout the Colony. A great inter-Continental wireless station is being erected at Kanga to communicate direct with Brussels. The West Coast District has a rather scanty rainfall (40 inches), but on the Malumbe Hills and in the whole interior the rainfall averages between 60 and 80 inches, and the country is very fertile and productive. Sleeping sickness, once very prevalent and destructive, is now decreasing. Extensive forests cover the central districts; oil palms are plentiful everywhere, and supply an ever-increasing trade in palm-oil and palm-kernels. Wild rubber and wild coffee are common; coffee, cocoa, Pará and Ceara rubber and cotton are successfully planted. Mines are very extensive. The copper district of Kanga has enormous deposits of copper ore, and the melters at the Lubumbashi produced about 23,000 tons of copper in 1919. A rich tin-belt extends from Bukama towards Lake Tanganyika. The gold-bearing districts of North-eastern Congo are being prospected by the Government, and contain both alluvial and reef gold. Diamond-bearing gravels are worked in the south. The total imports during the year 1919 were valued at \$5,681,000 francs: the exports (204,146,954 francs in 1919) are mostly palm-kernels and palm-oil, ivory, rubber, gum-copal, cocoa, copper, gold and diamonds. Capital, Boma (pop. 500 whites, 2,000 natives). Principal towns, Elisabethville (Katanga) (pop. 1,000 whites, 6,000 natives); Stanleyville (300 whites, 8,000 natives); Coquilhatville, Kinshasa (Stanley Pool), and Leopoldville.

Revenue (1919).....	£1,953,534
Expenditure (1919).....	2,081,975
Imports from U.K. (1920).....	1,006,487
Exports to U.K. (1920).....	724,755

By the *Anglo-Belgian Agreement* of July, 1919, the districts of Ruanda and Urundi, portions of the former territory of German East Africa (see "Tanganyika Territory"), which adjoin the Belgian Congo on the E., were assigned by Great Britain to Belgium. *Ruanda and Urundi* formed the N.W. corner of German East Africa from 5° S. lat. to the S. borders of (British) Uganda and have an area of about 15,000 square miles, with an estimated population of 3,000,000. They lie W. of the Victoria Nyanza and N.E. of Lake Tanganyika, through which are their respective outlets. The soil is poor, and the only exports are live stock and hides. The administrative capitals are Niansa (Ruanda) and Kitega (Urundi), the commercial capitals being Kigali (Ruanda) and Usumbura (Urundi).

BRUTAN,

See "Countries within the Indian Sphere of Influence" (p. 632).

BOHARA.

Emir of Bohara, H. H. Said Mir Alim Khan, b.

1884, succeeded 1912.

Bohara is a Central Asian State with an estimated area of 85,000 square miles, and a

population of 2,500,000, the majority being Muhammadan Uzbeks. The capital (*Bohara*) is a station on the Russian Trans-Caspian Railway, and has a population of about 95,000. The principal products are rice, wheat, fruit, hemp, cotton, and silk. Exports (mainly to Russia) are agricultural products and silk and cotton manufactures; imports are principally manufactured goods and sugar. Until the Russian revolution of 1917 the Emir was under the suzerainty of the Tsar. In Aug. 1920, a revolution, organised by Bolshevik (Red) emissaries, seized the capital, and the Emir took refuge in Afghanistan.

BOLIVIA, Republic of.

President, Bautista Saavedra.

MINISTRY (Feb. 1921).

Foreign Affairs, Alberto Gutierrez.

Interior, Abdon Saavedra.

War, Gen. Pastor Baldiviso.

Finance, José E. Estensoro.

Envoy Extraordinary, Minister Plenipotentiary in London, (vacant).

Charge d'Affaires, Señor Don Mamerto Uriolagolia.

Consul-General (acting), Señor Don Mamerto Uriolagolia, 20 Cophall Avenue, E.C. 2.

The Republic of Bolivia extends between lat. 8° and 23° S. and long. 50° 30' and 75° W., and its area is about 597,460 square miles, with a population in Jan. 1918 of 2,800,074. The Republic was formerly comprised in the Spanish Vice-Royalty of *Alto-Peru*, and derives its present name from its liberator, Simon Bolivar, (born 1783, died 1830).

The chief topographical feature is the great central plateau (6,500 square miles) over 500 miles in length, at an average altitude of 12,000 feet above sea level, between the two great chains of the Andes, which traverse the country from south to north, and contain, in Illampu, Illimani and Sajama, three of the highest peaks of the western hemisphere. The total length of the navigable streams is about 12,000 miles, the principal rivers being the Itenes, Beni and Mamoré.

Mining and agriculture are the principal industries, the mineral productions being very valuable. The ancient silver mines of Potosi are now worked only for tin, but gold, partly dug and partly washed, is obtained on the Eastern Cordillera of the Andes; the tin output is, after that of the Straits Settlements, the largest in the world, while copper, antimony, wolfram, bismuth, salt, and sulphur are also found. Its agricultural produce consists chiefly of rice, barley, oats, maize, cotton, coca, indigo, india-rubber, cacao, potatoes, cinchona bark, medicinal herbs, &c. The principal exports are tin ore, rubber, silver, copper ore, bismuth, coca, wolfram, zinc, hides, and lead ore; the chief imports are iron and steel products, textiles, machinery, sugar, flour, and coal. There are about 1,125 miles of trunk lines of railways in operation, and 390 miles under construction; and 4,000 miles of telegraph wire. There are wireless services between Riberalta, La Paz, Cobija, Capitandí (Chaco). There is direct railway communication to the sea at Antofagasta (2 days), Arica (1 day), and Mollendo

* The country has not been completely surveyed, and the area is officially estimated at 597,460 square miles; other estimates give an area of 707,125 square miles.

(25 days), and also (with a gap of 125 miles) to Buenos Aires (4 days), and from Río Mulato to Potosí; branch lines run from Oruro to Cochabamba. Construction on the railway between La Quiaca and Tupiza, in Bolivia, which, when completed, will allow through railway communication with Buenos Aires, is in the hands of a French firm. The gap between Tupiza and La Quiaca is crossed by an automobile service, taking one day. Communication with Para is effected by rail to Guayaquil and thence by steamer across Lake Titicaca to the railroad at Puno. The principal line is the Autopagasta and Bolivia railroad (725 miles), and a line from La Paz to the province of Yungas may eventually connect with the steamers on the rivers Beni, Mamoré, and other tributaries. A line from Potosí to Sucre, the legal capital, is under construction.

Bolivia is the only country in South America without a sea-coast, having been deprived of the ports of Tocopilla, Cobija, Mejillones, and Antofagasta by the "Pacific War" of 1879-1882 (see Chile). The Republic intends to appeal to the League of Nations for the return of a small coastal area north and south of Arica, in the Province of Taena. The Peace Army amounts to about 5,000, all ranks, the War Effective being about 105,000.

The chief cities are La Paz (pop. 107,252), Cochabamba (30,818), Potosí (29,977), Santa Cruz (25,807), Sucre (29,000), Tarija (20,818), and Oruro (32,000).

Spanish is the language of the country.

Consul-Gen. in Liverpool, Dario Freire.

Brazil, the most extensive State of South America, discovered in 1500 by Pedro Álvares Cabral, Portuguese navigator, is bounded on the north by the Atlantic Ocean, the Guianas, Colombia and Venezuela; on the west by Peru, Bolivia, Paraguay, and Argentina; on the south by Uruguay; and on the east by the Atlantic Ocean; and extends between lat. 5° 20' N. and 33° 45' S. and long. 34° 40' and 71° 15' W., being 2,600 miles from north to south, and 5,500 from west to east; with a coast-line on the Atlantic of 3,700 miles. The Republic comprises an area of 3,298,870 square miles, with a population estimated (1922) at 20,000,000.

The northern States of Amazonas and Pará and the central State of Mato Grosso (which together constitute more than one-half of Brazil) are mainly wide, low-lying, forest-clad plains. The eastern and southern States are traversed by successive mountain ranges interspersed with fertile valleys. In the extreme south, towards the interior, the land rises by gentle gradations to the height of 2,000 to 5,000 feet above sea level. The principal ranges are *Serra do Mar* in São Paulo; the *Serra do Mantiqueira* (Itatiaia, 9,000), and the *Serra do Espinhaço* (Itacolumi, 6,000 feet), in the south-east of Minas Geraes; the *Serra do Paraná*, between Goyaz and Minas Geraes, the *Serra dos Aymorés*, which divide Espírito Santo from Minas Geraes; and the *Serra da Gurguela*, Brancos and Araripe, which envelop Piahy.

Brazil is unequalled for the number and extent of its rivers. The Amazon, the largest river in the world, has tributaries which are themselves great rivers, and flows from the Peruvian Andes to the Atlantic, with a total length of some 4,000 miles. Its northern tributaries are the Rio Branco, Rio Negro, and Japurá; its southern tributaries are the Jurua, Purus, Madeira and Tapajós, while the Xingu meets it within 200 miles of its outflow into the Atlantic. The Tocantins and Araguaia flow northwards from the Plateau of Mato Grosso and the mountains of Goyaz to the Gulf of Pará. The Paranaíba flows from the encircling mountains of Piahy into the Atlantic. The São Francisco rises in the South of Minas Geraes and traverses Bahia on its way to the Eastern coast, between Alagoas and Sergipe. The Paraguary, rising in the south-west of Mato Grosso, forms a boundary with Bolivia on its way through Paraguay to its confluence with the Paraná, which rises in the mountains of that name and divides Brazil from Paraguay. On the Iguaçu, which unites with

the Uruguay at the Argentine boundary, are the majestic *Falls of the Iguaçu*.

GOVERNMENT.—Brazil was colonised by Portugal in the early part of the sixteenth century, and in 1500 became an independent empire under Dom Pedro, son of the refugee King João VI. of Portugal. On Nov. 15, 1889, Dom Pedro II., second of the line, was dethroned and a republic was proclaimed. The constitution rests on the fundamental law of Feb. 24, 1891, which established a federal republic under the name of *Estados Unidos do Brazil*. The President and Vice-President are elected for 4 years by the direct votes of all male Brazilians over 21 years who can read and write; they are ineligible for the succeeding term. They are aided, as an executive, by a Council of Ministers, who are responsible to the President and not to the legislature. Congress consists of a Senate of 63 members and of a Chamber of Deputies of 112 members; members of both houses are paid. The language of the country is Portuguese, foreign languages being read and spoken in the following order:—French, Italian, English, German and Spanish.

PRODUCTION.—The minerals are very considerable and valuable, comprising gold, silver, iron, diamonds, topazes, and other precious stones. The immense iron deposits have been scarcely touched. Manganese is exported, and there are important deposits of monozite sand. Low-grade coal deposits are in the south. Its agricultural produce is abundant and its forests are immense. Cattle-raising is an important industry, the number being computed at 31,000,000. The chief products of the country are coffee and rubber: the rubber comes from the more northern provinces, especially the valley of the Amazon, and is shipped from Pará and Manaus; coffee coming chiefly from São Paulo. Tobacco and cocoa are grown largely, especially in Bahia. Cotton is being largely cultivated. Sugar-cane is grown in large and increasing quantities in the northern provinces, Pernambuco being the centre of the sugar-producing zone. The exports include also meat, hides, maize, beans, and *Herba-mate* (tea). The imports consist principally of every description of manufactured articles, but there were (1915) 1,541 industrial establishments, including 161 cotton-mills, giving employment to 45,048 hands, and representing an invested capital of \$90,000,000. Foreign capital to the amount of £200,000,000 has been invested in Brazilian undertakings in the ten years 1906–1917. The enormous protective duties were again increased in 1887, 1893, 1896, 1906, and 1916. In 1900 the exported merchandise was classified: (1) animals and their products, £14,628,234; (2) minerals and their products, £2,930,539; (3) vegetables and their products, £89,068,579.

In 1900 the foreign trade of Brazil was shared as under:

Exports to:	Exports to:
Europe:	America:
France £12,420,000	U.S.A. £24,007,187
U.K. 8,750,300	Uruguay 4,774,000
Italy 7,225,360	Argentina 7,093,900
Belgium 2,084,400	Asia 35,800
Denmark 894,910	Africa 1,730,400
Spain 624,400	
Sweden 1,178,400	
	Total £107,922,400

DEFENCE.—The peace effective of the Army is about 30,000 all ranks. The Navy consists of 3 Dreadnoughts, 3 old battleships, 5 protected cruisers, 3 scouts, torpedo boats, and some small vessels and aircraft.

EDUCATION.—Primary education is secular and free, but is not as yet compulsory; it is maintained and controlled by the governments of the various States. Public instruction is progressing, and reading and writing are the qualifications for the franchise for males at 21. About 600,000 children attended the primary schools in 1911. Secondary education is under Federal control, and there is a national gymnasium at Rio de Janeiro. The pupils in all secondary schools numbered 32,000 in 1911. There is no University, but degrees are conferred in various faculties by authorities in the capital and State centres.

COMMUNICATIONS.—In December, 1919, there were 28,594 kilometres of railway open, and 3,600 under construction. Length of telegraph wires, 79,792 kilometres. In 1900 steam and sailing vessels of 24,941,466 tons (of which 6,070,643 were under the British flag) entered Brazilian ports, the principal harbours being Manaus, Pará, Maranhão, Pernambuco, Macaé, Bahia, Victoria, Rio de Janeiro, Santos, and Rio Grande.

	1919	1920
Revenue	£37,730,400	£41,155,429
Expenditure	40,817,887	40,686,815

Minister in London, M. D. Stancioff; 51, Queen's Gate, S.W. 7.
Counsellor of Legation, M. Doreff.
1st Sec. of Legation, M. Petroff-Tchomakoff.
3rd Secretary, M. D. Mamartcheff.
Attaché, B. Athanasoff.

The Kingdom of Bulgaria is bounded on the north by Rumania, on the west by Yugo-Slavia and Greece, on the east by the Black Sea, and on the south by Greece.

A Principality of Bulgaria was created by the Treaty of Berlin (July 13, 1878), and in 1885 Eastern Roumelia was added to the newly-created principality. In 1908 the country was declared to be an independent kingdom, the area at that date being 37,200 square miles, with a population of 4,337,500. In 1912-13 a successful war of the Balkan League against Turkey increased the size of the kingdom, but in August, 1913, a short campaign against the remaining members of the League reduced the acquired area, and led to the surrender of about 8,000 square miles to Rumania. On Oct. 22, 1915, Bulgaria entered the War on the side of the Central Powers by declaring war on Serbia. She thus became involved in the defeats of 1918, and on Sept. 29, 1918, made an unconditional surrender to the Allied Powers. On Nov. 29, 1919, she signed the Treaty of Neuilly, which ceded the S. Dobruja to Rumania and E. and W. Thrace to Greece. The present area of Bulgaria is stated at 293,000 sq. kilometres (= 71,497 sq.

miles), with an estimated population of 4,975,000. The prevailing religion of the Bulgarians is the Orthodox Greek Church. In 1920, the Gregorian was substituted for the Greek Calendar.

GOVERNMENT.—The executive power is vested in the Tsar, and is exercised by a Council of Ministers, appointed by him. The legislature is a single chamber National Assembly or *Sobranie* of 212 representatives, elected for a maximum term of four years by adult manhood suffrage. Metropolitan members receive 15 leva, and others 10 leva, a day and travelling expenses.

PRODUCTION.—Agriculture is the principal industry of the people and employs over half the population, the principal crops being wheat, rye, barley, oats, tobacco and fruit. The live stock includes sheep, goats, cattle, pigs, horses, asses and mules. Coal of good quality is mined at Pernik and Trevena, and stone, iron, gold, silver, lead, manganese and copper are worked, but the mineral development is in its infancy. The chief manufactures are woollens, cottons and cigarettes. The exports consist principally of cereals (especially wheat), live stock, essence of roses, woollens, skins, cheese, eggs, timber, cocoons, and tobacco; the principal imports being textiles, metal goods and machinery, colonial wares, leather, building materials, petroleum and other oils, paper, salt fish, rice, and coal.

DEFENCE.—Before the War of 1912-1918 service in the Army was universal and compulsory, and on a peace footing it numbered about 80,000, all ranks. During the War (Oct. 1912-Sept. 1918) about 550,000 passed into the ranks of the Army, and of those over 250,000 became casualties. By the Treaty of Neuilly the Bulgarian Army is limited to 20,000 all ranks.

EDUCATION is free and compulsory and the proportion of attendances is good; the number of illiterates in Bulgaria is very small. There are few technical schools. Sofia has a University.

COMMUNICATIONS.—There were 1,245 miles of railway open in 1919 and about 250 miles under construction; 4,000 miles of telegraph line and 1,254 of telephone line. In 1914 there were 2,515 post offices and 438 telegraph offices. The principal Balkan Sea ports are Varna and Bourgas; and Rustchuk, Sistor and Vidin on the Danube. In 1913, 11,755 vessels (3,132,481 tons) entered and 11,710 vessels (3,108,305 tons) cleared at Bulgarian ports.

	1920-21.	1919.
Budget revenue	£2,513,530,000 = 10,434,120	
Budget expenditure	£2,544,687,440 = 11,896,750	
Public debt (Jan. 1, 1921)	22,000,000,000 = 88,000,000	
	1924.	1919.
Total Imports	£9,610,000	£3,860,000
Total Exports	6,120,000	2,209,000

The Capital, **SOPIA**, at the foot of the Vitosha Range, on the River Isker, about 340 miles from the Black Sea port of Varna, and 125 miles from Lom-Palanka, on the Danube. Sofia is the most modern city in the Balkan Peninsula, and an important station on the Vienna-Constantinople railway, with an estimated population (1900) of 200,000; other towns are Philippopolis (47,000), Varna (41,000), Rustchuk (36,000), Silivro (25,000), Plevna (23,000), Shumla (22,000), Staro Zagora (22,000).

* Exclusive of War Indemnity of £200,000,000 under Treaty of Neuilly, Nov., 1919.

Tartar Pazardjik (18,000), Widdin (16,000), Jamboi (16,000), Vratska (15,000), and Burgas (15,000).

and Secretaries, Don Carlos Huidobro; Don Raul Valdivieso V.

Naval Attaché, Capt. Don Carlos Jouanne.

Attachés, Don J. Bittencourt; Don S. Monk; Don A. R. Edwards.

Consul, Vicente Echeverría L., 94 Gracechurch Street, E.C. 3.

A State of South America, of Spanish origin, lying between the Andes and the shores of the South Pacific, extending coastwise from the Rio Sama to Cape Horn south, between lat. 17° 15' and 55° 59' S., and long. 66° 30' and 75° 48' W. Extreme length of coast-line about 2,485 miles. Its extreme length is about 2,800 miles, with an average breadth, north of 41°, of 100 miles. The great chain of the Andes runs along its eastern limit, with a general elevation of 5,000 to 15,000 feet above the level of the sea; but numerous summits attain the height of 18,000 feet—the highest are the Gualatiri, 19,382 feet; the Baya, 19,993 feet; Cocoruti, 22,162 feet; El Muerto, 21,227 feet; and others nearly as lofty. The chain, however, lowers considerably towards its southern extremity. There are no rivers of great size, and none of them are of much service as navigable highways. In the north the country is arid. Chile is divided into 23 provinces and 1 territory, the aggregate area of which is estimated at 297,798 square miles.

The population (on Aug. 1, 1921) was 3,777,485. Included in the population are four distinct racial divisions: (a) the Spanish settlers and their descendants; (b) the indigenous Araucanian Indians, Fuegians, and Chongos; (c) mixed Spanish-Indians; and (d) European immigrants, who were represented in 1920 by 20,000 Spaniards, 15,000 Italians, 14,000 British and Irish, 12,000 Germans, and 10,000 French.

In 1920, the births numbered 146,706; marriages, 25,131; and deaths, 117,950. The principal towns, with their estimated populations (1920), are:—Santiago (498,931), Valparaiso (192,000), Concepcion (86,144), Talca (39,312), Iquique (44,290), Chillan (39,000), Antofagasta (56,000), and Temuco (25,000).

GOVERNMENT.—Chile was discovered by Spanish adventurers in the 16th century, and remained under Spanish rule until 1820, when a revolutionary war, culminating in the Battle of Maipo (April 5, 1818) achieved the independence of the nation. The present constitution bears the date of May 25, 1833. The President is chosen by indirect vote. The National Congress consists of a Senate of 37 members and a Chamber of Deputies of 225 members, elected by direct vote every three years. There is universal adult male suffrage for those who can read and write. From 1879-1882 Chile was at war with Peru and Bolivia, and Peru renewed her application for the return of the provinces of Tacna and Arica which were taken from her by Chile in the "Pacific War." Bolivia also demands an outlet to the Pacific. In 1921 Peru withdrew her application to the League of Nations, while the Assembly of the League decided that the League was incompetent to revise the Treaty of 1904 with Bolivia. Chile has shown a conciliatory attitude in these matters.

PRODUCTION, &c.—Agriculture and mining are the principal occupations. Wheat, maize, barley, oats, beans, peas, lentils, wines, tobacco, flax, hemp, Chile pepper, and potatoes are grown extensively; the vine and all European fruit-trees flourish. The live stock includes (1919) 2,263,140 cattle, 4,500,190 sheep, 450,000 horses, 200,000 goats, and 202,431 pigs. The mineral wealth is considerable, the country being extremely rich in copper-ore, and iron-ore. The rainless north yields more especially nitrate of soda, iodine, borate of soda, gold and silver, a large number of mines yielding both being in actual work in Tarapacá, Guanaco, and Cachinal in Atacama, and Caracoles in Antofagasta; the centre, copper and silver; and the south, iron and coal (1,007,026 metric tons of coal were mined in 1920). The production of copper in 1920 was 91,226 metric tons, valued at £7,592,000. In 1920 the production of nitrate was 2,523,446 metric tons, valued at £38,400,000; but in 1921 the nitrate industry was practically stagnant, buyers in Europe being unable to pay the high price of the fertiliser, while the artificial German product also entered into serious competition. There are smelting-works for copper and silver, tanneries, corn and saw mills, starch, soap, biscuit, rope, glassware, paints, mineral waters, boot and shoe, hosiery, hat, cloth, cheese, furniture, candle, match, brush, cordage and paper factories, breweries and distilleries; and the domestic industry furnishes cloth, embroideries, baskets, and pottery. The many ports favour commerce, and six lines of steamers connect the country with Panama and the Magellan Strait direct with Europe, a passage to

Liverpool occupying from 30 days. The staple articles of export are nitrate of soda, iodine, &c., copper bars and ores, silver ores, corn, flour, hides, wool, barley, honey and beans. The imports include flints, woollens and other textiles, food, and agricultural and mining machinery.

COMMUNICATIONS.—There were (1900) 8,211 kilometres of railway open, 35,820 kilometres of telegraph, 666 post-offices, and 82,843 kilometres of telephone, some worked by English companies, with 4 public wireless stations. The commercial marine numbers (1900) 95 steamers (46,587 tons) and 35 sailing vessels (23,382 tons). In 1900, 2,776 vessels (7,730,337 tons) entered Chilean ports from abroad, and 11,890 coasting vessels (7,595,270 tons); legislation is being introduced to make the coasting traffic exclusively Chilean.

DEFENCE.—All able-bodied male citizens from 20th to 45th year must serve in the militia. The peace effective of the active army is 21,440. The Air Force has a peace strength of 2 squadrons, with 60 pilots and 200 mechanics. The navy consists of 1 battleship, 1 ironclad, 6 cruisers, 22 destroyers, 5 torpedo-boats, and 6 submarines, with a complement of 6,000, all ranks.

EDUCATION is free, and in July, 1900, elementary education was made compulsory, and 73 per cent. of the children attend. There is a State University at Santiago. The National Library contains 293,085 volumes. The language of the country is Spanish and the State religion is Roman Catholic.

AREA AND POPULATION.

Territory.	Square miles.	Population.
China Proper	1,301,000	400,000,000
Manchuria	360,000	11,000,000
Mongolia	1,076,000	3,000,000
Tibet	750,000	3,000,000
Eastern Turkestan	600,000	2,000,000
Total	4,087,000	422,000,000

China proper (or the Eighteen Provinces) contains an area of over 1,300,000 square miles. Its length from north to south is 1,860 miles, and its breadth 1,500 miles, and its population, according to the latest Chinese estimates, exceeds 400,000,000.

China became a Republic on Feb. 12, 1912, with a President and Vice-President and 30

Executive Ministry, and a Legislature of a Senate (*Ts'ui Pi Ts'ui*) of 24 members and a House of Representatives (*Chung Pi Yuan*) of 556 members. The government of the 18 provinces is entrusted to civil and military governors, and under them each province is subdivided into circuits superintended by *Taoyins* or intendants, and again into districts. All the territorial officials are appointed by the central Government, and the provincial governors, though free to act independently in many matters of local detail and finance, are responsible to the central Government at Peking in all important questions, and especially so in foreign affairs. The Treaty of Kiakhta, 1858, between China, Russia, and Outer Mongolia recognises the Hukukha Khan as Ruler of Outer Mongolia, while China, as the Suzerain Power, appoints Residents at Urga and three other towns. The civil government of the three Manchurian provinces and of Turkestan is now similar to that of the province of China proper. The exact status of Tibet is still unsettled.

FOREIGN RELATIONS with the Chinese Empire have existed for many centuries. In the 13th century the Venetian merchant-adventurer Marco Polo resided in Cambaluc (the present Peking), and was employed by the Mongol Emperor Kublai Khan as adviser. In the 17th century Jesuit missionaries had attained considerable influence, but their power aroused jealousy, and they were expelled. The Dutch and Portuguese traders had for centuries maintained commercial dealings with the port of Canton, but towards the end of the 18th century they were largely displaced by the British East India Company, and when the Company's monopoly was withdrawn, in 1833, the position of British merchants in Canton became a national question, and contributed towards the first Chinese War of 1840. A treaty was signed at Nanking, as the result of these operations, ceding Hong Kong to Great Britain and opening five ports to foreign trade and residence; but the principle of extra-territoriality was maintained, and foreigners remained amenable only to the laws of their own countries. The continued exclusiveness of the Chinese Government led by a long chain of events to the war of 1860, when British and French troops captured Peking and burnt the Summer Palace. From this date the development of foreign trade began to be most important. In 1894 China fought a disastrous war with Japan, resulting in the loss of Formosa and the establishment of Korea as an independent state. An abortive attempt was made, in 1898, by the Emperor to introduce administrative reforms, but his reactionary ministers persuaded the Dowager Empress (his aunt) to reassume the reins of government. Under her rule a plot was hatched to rid the country of foreigners; and in the summer of 1900 the Legations in Peking and the foreign settlements in Tientsin were fiercely attacked and bombarded for many weeks. The situation was relieved at its most critical moment by the arrival of an allied army despatched by nearly all the Treaty Powers, and Tientsin and Peking were captured. The Imperial Court fled, and remained in voluntary exile until early in 1901. Meanwhile, a Peace Protocol was signed between the Envoys of the Treaty Powers and the Chinese Plenipotentiaries, Prince Ching and the late Li Hung Chang. This provides for an indemnity of \$20,000,000 to be paid

within the next 30 years. Subsequent negotiations resulted in new commercial treaties: (1) between the U.K. and China (5 Sept., 1904); (2) U.S. and China (8 Oct., 1903); and (3) Japan and China (3 Oct., 1903). Under the two last Mukden, Tientsin, Chang-sha, and Antung in Manchuria, were made Treaty ports.

On the conclusion of the war between Russia and Japan in 1905, a Treaty and Additional Agreement relating to Manchuria were entered into between Japan and China. By the former the Chinese Government consented to all the transfers and assignments made by Russia to Japan in Manchuria; and by the latter the following cities and towns in Manchuria were opened as places of international residence and trade:—Feng-huang-ch'eng, Liao-yang, Hsin-mintun, Tung-chiang-tzu (on the Liao River), and Fa-ku-men in Fengtien Province; Ch'ang-ch'un, Kirin, Harbin, Ninguta, Hunch'un, and Nansing in the Kirin Province; and Taitshar, Hallar, Aihun and Manchuli in the Heilungchiang Province.

In October, 1911, a revolution broke out in Hankow, which resulted finally in February, 1912, in the abdication of the Manchu Dynasty in favour of a Republican form of Government. In 1913, a second revolution, engineered by the Southern Party, was successfully put down by President Yuan Shih-kai. Since that date the Central Government has been gradually consolidating its position, and bringing about a centralisation of power in Peking. In May, 1915, a new treaty with Japan was concluded by which additional privileges are granted to Japanese in Manchuria and Mongolia. Towards the end of 1915 President Yuan Shih-kai engineered a campaign to revert to a Monarchical form of government, and, as the result of elections held all over the country, was invited to ascend the throne as Emperor. The Southern Provinces, however, immediately rose in revolt, and the attempt failed and finally ended with the death of Yuan Shih-kai in May, 1916. The Vice-President, Li Yuan-hung, succeeded to the Presidency, and all traces of the Yuan Shih-kai régime were rapidly abolished. The first Republican Parliament reassembled, and the government reverted to the Republican form adopted after the overthrow of the Manchu Dynasty in 1912. Both Houses of Parliament are elected by a system of limited franchise, and the government of the country is vested in them. The President, who is elected by Parliament, is assisted by a Premier and a Cabinet of Ministers, whose appointments have to be approved by Parliament, and to whom they are responsible for their actions. An abortive attempt to restore the Monarchy was suppressed in June, 1917. In 1920 a revolt in South China culminated in the declaration of an independent Republic of South China (with its capital at Chung King) including the former provinces of Yunnan, Kwei Chow, Sze Chuen and Honan, but this Republic has not yet been recognised, and internal and external discussions appear to threaten its existence.

The estimated foreign population of China during the year 1914 was as follows: British, 8,914; Japanese, 84,948; Russian, 56,319; American, 4,365; Portuguese, 2,289; German, 3,013; French, 1,864; other nationalities, 1,197, the total being 164,807. Out of a total of 3,421 foreign firms in China, 524 were British, 1,277 Russian, 925 Japanese, 273 German, 136 American and 113 French.

DEFENCE.—The army is undergoing reorganization. The total strength of all forces in August 1913, just after the Rebellion of that year, was estimated at 200,000, but no authenticated statistics are obtainable. An Air Force is being organised, with the assistance of a British officer (Group-Capt. F. V. Holt, C.M.G., D.S.O.). The Navy consists of a protected cruisers built in 1911 (2,750 tons), 4 older protected cruisers (4,300–3,000 tons), 3 torpedo gunboats (850 tons), 11 gunboats (750–550 tons), 4 destroyers (400 tons), and 8 small torpedo boats (200 tons).

EDUCATION.—Many changes in administration and development are under discussion, including a proposal to establish universal compulsory primary education. There is a University in Peking and a number of colleges all over China under foreign management. In 1911, there were 545 foreigners employed in educational work.

COMMERCE.—The net trade of the open ports for the years 1914–1919 is stated as follows, in *taels* (In 1914, 7.5 = £1. In Oct. 1920, 4.1 = £1):—

Year.	Imports.	Exports.	Total.
1914	569,441,380	356,226,629	925,668,011
1915	424,475,729	418,861,164	843,336,893
1916	516,406,995	481,797,366	998,204,361
1917	549,518,774	468,931,630	1,018,450,404
1918	554,893,082	485,883,031	1,040,776,113
1919	614,647,395	599,268,939	1,213,916,334

The import of Indian opium is now prohibited.

External Trade, 1919.
Haiwan Trade.

County.	Imports from.	Exports to.
Japan	246,941,000	295,006,000
Hong Kong	153,632,000	131,495,000
U.S.A.	110,237,000	101,119,000
U.K.	64,298,000	57,186,000
France	3,375,000	34,885,000
Straits Settlements	10,116,000	11,881,000
Imports from U.K. (1920)	£43,970,382	
Exports to U.K. (1920)	26,898,466	

COMMUNICATIONS.—*Railways.*—About 6,500 miles were open in Jan. 1915, inclusive of the Manchurian lines, while 2,500 miles more are projected or under construction.

Shipping.—The China Merchants Steam Navigation Co. have a fleet of 31 ships of an aggregate tonnage of 60,000. Besides this, there are a large number of small vessels engaged in the coasting trade and on the Yangtze. In 1914 the total tonnage of vessels entered and cleared at the treaty ports was 96,326,276, an increase of 2,291,446 on that of the previous year. Of these 40 per cent. were British, 25 per cent. Chinese, 5 per cent. German, 20 per cent. Japanese, 2 per cent. French, and 3 per cent. Russian. In June, 1920, a vessel of 14,750 tons, constructed at the Kiangnan Dock and Engineering Works at Shanghai, was launched and supplied to the order of the United States Shipping Board.

Telegraphs are being rapidly constructed by the Central Government, and Peking is in communication overland with Europe and Tibet, the line being extended to Lhasa. In 1913 there were 22,000 miles of land lines and 51,000 miles of aerial wires.

CUSTOMS AND POSTS.—The Chinese Maritime Customs is the controlling service; this body consists of nearly 1,500 Europeans, a large por-

portion of these British subjects, all under the control of the *Inspector-General*. By an Imperial Decree of May, 1908, the Maritime Customs Dept. was transferred from the Foreign Board to the Board of Revenue, and two Chinese Administrators-General were appointed. But the change has not materially affected the powers hitherto exercised by the *Inspector-General*. In addition to the collection of dues at the Treaty Ports, this service manages the lighting and navigation thereof, and keeps a small fleet of cruisers to enforce its regulations. The Chinese Post Office, formerly a branch of the Customs, was transferred in 1911 to the Ministry of Communications, and a *Postmaster-General* (foreign) was appointed. Already letters can be sent all over the 18 provinces at a uniform rate of 3 cents for 20 grammes. The number of Chinese post offices is 8,324; 528,981,400 postal packets and 5,385,260 parcels were handled in 1914.

BUDGET (Nov., 1919).

Ordinary Revenue	Taels 375,809,000
Extraordinary Revenue	271,900,000
Total	647,700,000
Ordinary Expenditure	Taels 300,000,000
Extraordinary Expenditure	243,000,000
Special Expenditure	204,700,000
Total	647,700,000

Chinese Debt (Jan., 1920).

War Loans outstanding	£30,000,000
Boxer Indemnity do.	48,000,000
Railway Loans do.	40,000,000
General Loans do.	50,000,000
Japanese Loans do.	30,300,000
Short term Loans do.	17,000,000

£215,000,000

About 10s. 2d. per head of the population.

Included in the expenditure is the sum of 214,000,000 *taels* towards repayment of debt.

MANCHURIA lies to the north of China Proper, and has a total area of about 360,000 square miles, with a population estimated at 11,000,000. The capital is Mukden (pop. 250,000), a station on the Manchurian railroad and connected with the Russian system. Indigo, opium, cotton, tobacco, and various cereals are grown, and there is great mineral wealth.

MONGOLIA has a total area of 1,076,000 square miles and a population estimated at about 3,000,000. Outer Mongolia is now, by the Treaty of Kiakhta of 1915, an autonomous state under Chinese suzerainty. Its ruler, the Hutukhta Khan of Urga, receives his title from the Chinese Government. China appoints a Resident at Urga, with three Assistant Residents in other towns. The principal industry is cattle and sheep raising and the provision of transport animals.

YUNNAN adjoins Burma and has a considerable trade with British India, see p. 633.

TIBET (area, 750,000 square miles; pop. 3,000,000) borders on British India, see p. 633.

CHINESE TURKESTAN has a total area of 600,000 square miles and a population estimated at 2,000,000. It includes Zungaria and Chinese Tartary, and provides sheep, cattle, and transport animals for the caravan routes. The chief centres are Urumchi and Kulja, see p. 633.

CAPITAL OF THE CHINESE REPUBLIC, Peking.
Population, 1,000,000.
FLAG: Five horizontal bands, red, yellow, blue, white, black.

Stilian Avenue, Southampton Row, W.C. 1.
Consul in Liverpool, Señor Don Genaro Payan.

The Republic of Colombia lies in the extreme north-west of South America, having a coast-line on both the Atlantic and Pacific Oceans. It is situated between 2° 40' S. to 12° 25' N. lat. and 68° to 79° W. long., with an estimated area of 461,606 square miles, and a population estimated at 5,475,000, of whom more than one-half are whites and half-castes. The country is intersected by three great ranges of the Andes, known as the Western, Central, and Eastern Cordilleras; the second contains the highest peaks, but the latter is the more important, as it consists of a series of vast table-lands, cool and healthy. This temperate region is the most densely-peopled portion of the Republic.

The principal rivers are the Patia, Cauca, Magdalena, Caquetá and Putumayo. The Patia flows through the famous *Minima Gorge* of the Western Cordilleras, and one of its tributaries (the Carchi, or Upper Guistara) is spanned by the Rumichaca Arch, or *Inca's Bridge*, of natural stone. On the Fuzza is the Great *Fall of Tequendama*, 480 feet in height.

The Colombian coast was visited in 1499 by Christopher Columbus, and in 1536 a Spanish expedition under Quedes established a government of certain coastal communities under the name of New Granada, which continued under Spanish rule until the revolt of the Spanish-American colonies of 1811-1824. In 1829 *Simón Bolívar* (born 1783, died 1830), established the Republic of Colombia, consisting of the territories now known as Colombia, Panama, Venezuela and Ecuador. In 1829-1830 Venezuela and Ecuador withdrew from the association of provinces, and in 1831 the remaining territories were formed into the Republic of New Granada. From 1833-1852 many of the Colombian Provinces declared their independence, and in the nineteenth century there were frequent revolutions and internal wars. In 1903 Panama seceded from Colombia, and is now a separate Republic.

The Colombian forests are extensive, among the trees are mahogany, cedar, fustic, and gum.

dye-woods and medicinal plants. The mineral productions are emeralds, gold, silver, platinum, copper, iron, lead, and coal; petroleum is available in large quantities but is unworked. The principal agricultural products are coffee, cotton, plantains, and bananas, and in some parts tobacco, wheat and other cereals. Manufactures, for home consumption, consist of woollen and cotton stuffs. The chief exports are coffee, precious metals, hides, india-rubber, and bananas. All religions are tolerated.

The standing army consists of about 6,000 men; the navy has been nearly abolished. Railroads are in their infancy, about 750 miles being open in 1900, with 8,680 (1907) miles of telegraph. The rate of exchange is about \$5 gold = £1 (approximately).

Spanish is the language of the country.

Minister in London (vacant).

Consul-General, W. J. Le Lacheur, 58 Lombard Street, E.C.

The Republic of Costa Rica, the most southern State of Central America, extending across the Isthmus, between 8° 27' and 11° 10' N. lat. and from 82° 30' to 85° 45' W. long., contains an area of about 23,000 English square miles, and a population (1920) of 469,123.

For nearly three centuries (1530-1821) Costa Rica formed part of the Spanish-American

dominions, the seat of government being at Cartago. In 1821 the country joined in the War of Independence, and from 1824-1839 it was one of the United States of Central America.

The principal agricultural products are coffee, bananas, rice, maize, sugar-cane, potatoes, cocoa and beans, the soil being extremely fertile. The chief exports (1900) are coffee (£27,420), bananas (£27,988), sugar, gold and silver bullion, cacao, hardwoods, vegetables, skins, and hides. The imports are dry goods, hardware, provisions, railway materials, machinery, paints, and general merchandise (in 1900, 52.11 per cent. from United States, 14.21 from United Kingdom, 13.42 per cent. from Germany, and 6.62 from Central America.

The chief ports are Limon, on the Atlantic coast, through which passes the whole of the important banana trade with the U.S. and U.K., as well as by far the larger part of the other exports and imports; and Puntarenas on the Pacific coast. In 1900, 534 foreign vessels (760,901 tons) entered, and 538 (763,758 tons) cleared at Costa Rican ports. About 405 miles of railroad were open in 1900. In 1900 there were 301 post offices, dealing with 3,944,504 packets, and 111 telegraph offices (one wireless), with 1,729 miles of line. Telephones, 513 miles. A considerable amount of English capital is embarked in the Republic. Spanish is the language of the country.

The island of Cuba (the largest of the "West India" Islands) lies between 74° and 83° W. long., and 19° and 23° N. lat., with a total area of 44,786 sq. miles and a population of 2,150,112 (1910).

The island of Cuba was visited by Christopher Columbus, during his first voyage, on October 27, 1492, and was then believed to be part of the Western mainland of India. Early in the 16th century the island was conquered by the Spaniards, to be used later as a base of operations for the conquest of Mexico and Central America, and for almost four centuries Cuba remained under a Spanish Captain-General. The slave trade was abolished early in the 19th century, and the slaves were emancipated from 1880-1886. The government of Spain was marked by a generally corrupt administration, complicated by internal unrest fomented by external influences, and the various attempts at independence met with severe military repression. The separatist and autonomous agitation culminated in the closing years of the 19th century in a fierce and bloodthirsty war, and although a conciliatory movement was evinced by the Madrid authorities in 1897, the struggle was continued by the party of separation in the island. In 1898 the government of the United States put into execution a threat of interference by the despatch of the battleship *Maine* to Havana harbour, and in February of that year the vessel was sunk by an explosion, the cause of which appears likely to remain an unsolved mystery. On April 20, 1898, the U.S. Government demanded the evacuation of Cuba by the Spanish forces, and a short Spanish-American war led to the abandonment of the island, which was occupied by U.S. troops. From Jan. 1, 1899, to May 20, 1902, Cuba was under U.S. military rule, and reforms of the widest and most far-reaching character were instituted. On May 20, 1902, an autonomous government was inaugurated with an elected President, and a legislature of two houses. The island was, however, again the prey of revolution from July to Sept., 1906, when the U.S. Government resumed control. On Jan. 28, 1909, a republican government was again inaugurated.

Of the total area of 28,000,000 acres, only about 1,000,000 acres are cultivated, 50 per cent. of these being under sugar cane and 30 per cent. under tobacco, sweet potatoes and bananas. Rice, coffee, coconuts and maize are also grown and tropical fruits (oranges, coco-nuts, pine apples, &c.) flourish. The chief agricultural products of the island are tobacco and sugar (estimated crop in 1920, 3,650,000 tons; actual crop, 1918-19, 3,977,594 tons); the chief product of the forests is mahogany, while cedar is also used for boxing the tobacco crop. The live stock includes about 3,000,000 cattle and 600,000 horses, the vast savannahs of Central Cuba being particularly suitable for cattle ranges.

2,516 miles of railroad are open and about 6,000 miles of telegraph line.

Spanish is the language of the island.

	1926-27.	Estimated. 1927-28.
Revenue	\$46,679,942	\$44,480,000
Expenditure	\$44,553,201	\$42,737,774

Part of the Austro-Hungarian Monarchy declared its independence on Oct. 28, 1918, as the Czechoslovak Republic, and ten days later the *Národní Východ* (National Council) of Czechoslovakia took over the administration of the independent territories. The political neighbours of the Republic are the Austrian and Hungarian Republics on the E., the German and Polish Republics on the N., the German Republic

on the W., and the Ukraine Republic on the E. Within these limits are the former Austrian Provinces of Bohemia and Moravia and part of the Province of Silesia; and Northern Hungary from the Danube (at Pressburg, on the Austrian frontier) to the Carpathians (at the headwaters of the Ung River in the eastern slope of Mt. Verezka)—a total area of about 54,041 sq. miles, with a population estimated at 12,099,376, of whom 6,000,000 are Czechs, 3,700,000 Germans, 1,700,000 Slovaks, 1,200,000 Magyars, 300,000 Ruthenians and 250,000 Poles. The new State was recognised by Austria in 1918 and by Hungary on March 10, 1919. The National Assembly, consisting of a Senate and a Chamber of Deputies, is elected by universal adult suffrage of both sexes. The executive power is exercised by a Council of Ministers, appointed by the President. In 1919 the Democrats, Agrarians and Slovaks were in the ascendancy, Socialists 28, Clericals 28 and Progressives 6 being in the minority of the 260 members. The Constitution guarantees religious and political freedom, and the Church will be separated from the State. About 75 per cent. of the people are Roman Catholics.

As regards both natural resources and industrial development, Czecho-Slovakia is one of the richest territories in Europe. By the Peace Treaty it has acquired about 80 per cent. of the whole industry of the former Austrian Empire. It has several rich coalfields, and possesses valuable mineral resources which, notably in Slovakia, have not yet been fully developed. Radium, gold, silver, iron, graphite and lead, are all mined successfully, while the whole country is abnormally rich in mineral and thermal springs. Oil is found in Slovakia, and Bohemia has rich deposits of clay, kaolin and sand. The whole country is well farmed, and agricultural production is on a very high level of excellence. In foodstuffs, however, the country is not self-supporting. Thirty-three per cent. of the total area of the country is forest land, and both in the productiveness of the forests and the quality of the timber the forest wealth of the Republic is enormous. In its industrial development Bohemia may be compared to Belgium. In Bohemia, Moravia and Silesia, which have a total population of ten millions, more than four million people are engaged in industry. The various industries are well organised, and as regards both machinery and modern improvements the factories are as well equipped as any in Europe. Outside of Slovakia illiteracy is almost unknown, and both the German and Czech elements which compose the working-class population are hard-working and in many cases highly skilled. The new Republic possesses, therefore, many valuable economic advantages, and after the first two and a half years of its existence it is no exaggeration to state that Czecho-Slovakia is in a far more flourishing state than most of its neighbours.

Czecho-Slovakia has no direct access to the sea, but has a right of access over the Elbe and Oder to Hamburg and Stettin, for which purpose the Government proposes to canalise the Upper Elbe in order to connect it with the Oder and the Danube. If this proposal is carried out, the country will be traversed by a waterway affording a communication from the North Sea and Baltic, via the Danube, to the Black Sea.

The capital is Prague on the Moldau, the former capital of Bohemia, with a population estimated in 1921 at 576,000; other large towns are Brunn (Brno) in Moravia (pop. 225,000); Pilsen (Pilsen), the brewing centre in Bohemia (pop. 125,000); Pressburg (Bratislava), where the Danube forms the S. boundary of the Republic (pop. 84,000); and Kaschan (Kosice) in Eastern Slovakia (pop. 50,000).

DANZIG.

Under Article 102 of the Treaty of Versailles, the City of Danzig with the surrounding territory (constituting a total area of about 580 sq. miles, with a population estimated at 200,000) was declared to be a Free City, under the guarantee of the Supreme Council of the Allied Nations. There is an elected legislature of 60 members. The city and port of Danzig, at the mouth of the Vistula, has a considerable trade, and if the grain industry of Russia and Poland should revive, a large quantity of wheat and rye would be exported. The tonnage of ships entered in 1923 exceeded 1,200,000 tons, and of those cleared 875,000 tons.

Danzig—British High Commissioner, Lt.-Gen.

Consulates at Hull, Liverpool, Manchester, Belfast, Falmouth, Guernsey, and Newcastle-on-Tyne.

A Kingdom of Northern Europe, and the smallest of the Northern States, consisting of the islands of Zealand, Funen, Lolland, &c., the peninsula of Jutland, and the outlying island of Bornholm in the Baltic. Denmark is situated between 54° 34'—57° 44' N. lat. and 8° 5'—12° 40' E. long., with an area of 15,048 square miles, and a population in 1916 of 2,921,000, nearly one-half of whom live exclusively by agriculture, and one-fourth by manufactures and trade.

In 1864 Denmark was attacked by Prussia and Austria and deprived of Schleswig-Holstein (Prussia taking the whole territory after a further war with Austria in 1866). At the conclusion of peace between the Central Powers and the Allies in 1919, the question of Schleswig-Holstein was subjected to a plebiscite of the inhabitants, and North Schleswig is now part of Denmark.

The common products are wheat, rye, oats, barley, potatoes, cattle, horses, pigs, sheep, and butter. Its manufactures are, for the most part, for home consumption. Its principal imports are coals, manufactured goods (woollens, silks, cottons), iron, hardware, wine, fruit, tea, maize, and colonial produce. In 1918, 1,070,000 hectares were under corn crops, 287,600 ha. sugar and other beets, and 787,800 ha. hay crop. In July, 1918, the live stock numbered 544,900 horses, 2,123,400 cattle, 470,000 sheep, and 620,800 swine. The crops in 1918 included 4,120,400 qrs. of oats, 2,364,400 of barley, 1,507,500 rye, 2,003,000 mixed corn and 766,000 qrs. of wheat. Its chief exports are agricultural produce, including wheat and barley, bacon, hams, flour, butter, eggs, hides, skins, corn-meal and oil-cake, horses, and cattle. There is a sea-going mercantile marine of 309 steamers, with a tonnage of 341,835. There are (1917) 2,565 miles of railway and 8,437 miles of telegraph line.

DEFENCE.—The Army consists of about 14,000 trained men, the vote for 1918-19 amounting to Kr. 85,000,000 (including supplementary

estimates of Kr. 69,000,000). The Navy consists of 4 coast-defence ironclads and 1 launched, 2 small cruisers, 27 torpedo-boats (built and building), 10 submarines (built or building). Vote, 1918-19, Kr. 33,000,000.

EDUCATION is free and compulsory, the schools being maintained by local taxation. Special schools are numerous, horticulture and agriculture predominating. The University is at Copenhagen.

The outlying possessions and colonies of Denmark have an area of about 50,000 square miles, with close on 35,000 inhabitants. They include the Færoe, or Sheep Islands (515 sq. m., pop. 1914, 19,500); GREENLAND (ice-free portion about 50,000 sq. m., total area about 530,000 sq. m., population, 1911, 13,450), the trade of which is a Government monopoly. (The three islands in the West Indies—St. Croix, St. Thomas, and St. John—were sold to the U.S.A. in 1917, the price paid being stated as \$25,000,000.)

Consul, Octavio Ventura.

Vice-Consul, A. M. Ventura.

The Republic of Santo Domingo, formerly the Spanish portion of the island of that name, is the oldest settlement of European origin in America, having been founded in 1496 by Bartolomeo Columbus, who named it Hispaniola. The island was peopled by the Spaniards with imported African slaves, who soon exterminated the "Indian" tribes. In 1822 an independent republic was proclaimed and the Spaniards abandoned the country. The present republic of San Domingo broke away from Haiti in 1844 and its independence is secured under a law of Nov. 6, 1844. The Dominican Republic comprises an area of about 18,045 square miles, with an estimated population of nearly 700,000. Sugar and cocoa are the most important crops, and coffee, and tobacco are grown in fair quantities, the other products being mahogany, furniture woods, cotton, wax, honey, logwood, fustic, turtle-shell, hides, and divi-divi. There are about 150 miles of public railroad, and telegraphic (3 wireless stations) and telephonic communication has been established throughout the Republic, which is connected by cable with North and South America, New York, Curacao, and Porto Rico. The Customs are administered temporarily by officials appointed by the United States Government, under a Treaty by which the U.S. collects the Customs, assists the Government to maintain peace, and acts as intermediary between the Republic and its foreign creditors. Since 1907 not less than 55 per cent. of the Customs Collections has been deposited in a New York Bank to pay the interest and sinking fund charges of the Foreign Loan.

On 29 Nov., 1926, a military Government by U.S. officers was proclaimed. All the Government departments are being administered by these officers, while the entire control of finance and police is in their hands. A native constabulary under American officers is being formed.

British trade is hampered by the insufficiency of direct maritime communication and by the absence of direct service with the largest ports, which are on the south coast, the ships of the R.M.S.P.Co. calling at the northern ports only.

An equatorial State of South America, extending from lat. 1° 38' N. to 6° 5' S., and between 60° 20' and 81° W. long. (according to the Ecuadorian geography, but there are boundary disputes with Peru), comprising an area of 276,000 English sq. miles.

The former Kingdom of Quito was conquered by the Incas of Peru in the latter part of the 15th century. Early in the 16th century Pizarro's conquests led to the inclusion of the present territory of Ecuador in the Spanish Vice-Royalty of Peru. The independence of the country was achieved in a revolutionary war which culminated in the battle of Mount Pichincha (May 24, 1822).

The Republic of Ecuador is divided into 17 provinces and one territory. It has a population of about 2,000,000, mostly descendants of the Spaniards, aboriginal Indians, and Mestizos. The territory of the Republic extends across the Western Andes, the highest peaks of which are Chimborazo (20,700 ft.), Illinza (17,405 ft.), Caranahrazo (16,515 ft.), Cotacachi (16,301 ft.), and Pichincha (16,000 ft.) in the Western Cordillera; and Cotopaxi (19,498 ft.), Antisana (18,864 ft.), Cayambe (19,160 ft.), Altar (17,730 ft.), Sangay (17,464 ft.), Tungurahua (16,690 ft.), and Sinchulago (16,365 ft.) in the Eastern Cordillera. Ecuador is watered by the Upper Amazon, and by the rivers Guayaquil, Mira, Santiago, Chones, and Esmeraldas on the Pacific coast. There are extensive forests, and the cinchona bark tree is common.

Its chief products are cocoa, vegetable ivory, cotton, coffee, india-rubber, sugar, orchilla weed, straw hats and hammocks, bark, yams, tobacco,

fruits, castor-oil, wheat, &c. Its minerals consist of gold, quicksilver, lead, iron, and copper; emeralds and rubies are occasionally met with, and sulphur is found in many parts. The chief exports are cocoa, caoutchouc, vegetable ivory and gold, cinchona bark, Panama hats, coffee, and cattle; the chief imports are textiles and other manufactured goods. A railroad connecting Guayaquil and Quito was opened in 1902. Guayaquil is the chief port (population, 1900, about 100,000); other chief towns being Quito, the capital, 70,000; Cuenca, 30,000; and Riobamba, 12,000. The *Galapagos* (Tortoise) Islands (2,870 square miles) belong to Ecuador. The language of the country is Spanish.

The most northerly of the Baltic provinces, is bounded on the N. by the Gulf of Finland, on the S. by Latvia, on the W. by the Baltic Sea and on the E. by Lake Peipus and Soviet Russia (along a line roughly parallel with the eastern shore of the lake). The islands of Dago, Osel and other smaller islands in the Baltic form part of the Republic. It has an area of about 23,160 sq. miles (within the boundary settled by agreement with Soviet Russia), with a population (1900) of about 1,300,000. A large portion of the surface consists of forests, moors, and small lakes. Agriculture is the chief industry, rye, oats, barley, and flax being the chief crops, and dairy farming is carried on. There are important manufactures, including distilling, sugar refining, oil pressing, woollen, cotton, tobacco, cork, soap, and petroleum. The capital is Reval (pop. 1900, 123,000), an important Baltic port, connected by railway with Petrograd;

other towns are Narva, Hapsa, Pernau, Valk and Reapsa.

Legislature consists of a single-chamber Assembly (Riigikogu) of 100 members elected for 3 years by universal adult suffrage. The executive is entrusted to a council of Ministers, the Prime Minister being Regent of the Republic.

Revenue (1902) E marks 6,762,440,300.

In Nov., 1921, 1,495 Esthonian marks = £1.

St. Andrew Street, Shaftesbury Avenue, W.C. 2.

A country situated on the gulfs of Finland and Bothnia which was conquered by Russia from Sweden, and annexed in 1808. Resulting from the revolution in Russia, Finland proclaimed its independence in 1918, and is now an independent Republic. The area is 145,588 square miles, with a population (1921) of 3,333,814, of whom about 3,000,000 are Finns, 300,000 Swedes, and 2,000 Laps, leading a nomadic life in the north. Nearly all the inhabitants are Lutherans. There is a university at Helsinki, with 2,722 students, of whom 737 are women, in addition to the Polytechnic and the (reopened) Swedish University at Åbo. The leading crops are rye, barley, oats, potatoes. Saw mills, wood pulp, cellulose and paper manufacture provide the chief industry, and the forests are a great source of wealth, immense quantities of timber being prepared for export; dairy produce is also exported. There are 2,668 miles of railroad; and a merchant fleet of 5,000 vessels (mostly small), of which 693 are steamers. Railway connexion with Sweden was completed in 1909.

The country was formerly governed by the Finnish Senate, of 22 members, with a Diet of 4 estates elected by the people, but under the Constitution of Jan. 1, 1907, there is a single Chamber elected by universal suffrage of both sexes, women being likewise eligible for election to the Chamber. Finland was thus the first country to concede woman suffrage and representation, and it is noteworthy that it was gained without agitation.

The Åland Archipelago, a group of some 300 small islands at the entrance to the Gulf of Bothnia was wrested from Sweden by Russia in 1809, and was incorporated in the government

district of Finland. The total area of the archipelago is about 220 square miles, with a population of about 19,000, of whom about two-thirds inhabit Åland (the largest island). Swedish claims to the archipelago are not admitted by the Finnish Government.

The most westerly State of Central Europe, extending from 42° 20' to 51° 5' N. lat., and from 7° 45' E. to 4° 45' W. long., bounded on the north by the English Channel and Straits of Dover (Pas de Calais), which separate it from England. Its circumference is estimated at about 3,000 miles, and its area (in 1914) at 207,076 square miles, divided into 87 departments, including the island of Corsica, in the Mediterranean, off the west coast of Italy. The territory ceded by the Treaty of Frankfurt (May 10, 1871) amounted to 5,602 square miles; that regained by the Treaty of Versailles (June 28, 1919) to 5,819 square miles, making the present area of France (exclusive of Algeria) 212,895 square miles, with a population (provisional returns of the census of March 6, 1921) of 37,499,394. The population at the census of 1911 was 39,601,509, and in 1913 there were 745,539 births, 208,760 marriages, and 703,638 deaths. From 1914-1920 there were 2,779,543 births, and 4,232,705 deaths, exclusive of war losses which exceeded 1,000,000; in 1920 the excess of women over men was 2,500,000.

France has always been attractive to foreigners, of whom (1921) 1,415,128 were resident there; in 1906 the number was 1,046,905, including 377,638 Italians, 310,433 Belgians, 87,836 Germans, 35,990 English, 14,863 of the latter residing in the Department of the Seine. 20 per cent. of the foreign population was born in France. About 26,000 Frenchmen are stated to be resident in England.

GOVERNMENT.—The monarchical system of government was overthrown by the French Revolution (1789-1793), and the First Republic endured until the Great Napoleon (born Aug. 15, 1769, died May 21, 1821) founded the First Empire in 1804. The monarchy was restored in 1814, and also after the "Hundred Days" of Napoleon (March 20-June 29, 1815), until the Second Republic of 1848, which became the Second Empire on Nov. 2, 1852. On Sept. 4, 1870, the Emperor Napoleon III. (nephew of the Great Napoleon) was deposed, and the Third Republic was set up. The head of the Republic is the President, elected for 7 years by the National Assembly of the two houses of the Legislature, the Senate of 300 members (elected by indirect vote for

1 Finnish Mark.—The mark is the same nominal value as the franc; the average exchange Jan.-Sept. 1921 was 105-12 = 100 sterling.

9 years, one-third being renewable every 3 years) and the *Chamber of Deputies* of 597 members (elected by direct vote for 4 years). Members of the legislature receive 25,000 francs a year and travelling facilities over the railways.

PRODUCTION.—The chief agricultural products are wheat, barley, rye, maize, oats, potatoes, beetroot (for the manufacture of sugar), hops, &c. Fruit trees abound, and are very productive, the principal being the olive, chestnut, walnut, almond, apple pear, citron, fig, plum, &c. The agricultural production in 1913 and 1920 is shown in the following table:—

Crop.	Production.	
	1913. Quintals.	1920. Quintals.
Wheat	26,919,090	62,706,270
Rye	12,714,750	8,426,630
Barley	10,437,600	7,707,310
Oats	51,826,010	42,228,010
Potatoes	125,829,622	203,155,000
Beet	252,201,090	156,015,300

Forestry is an important industry, the principal forests being those of the Ardennes, Compiègne, Fontainebleau, and Orléans, consisting chiefly of oak, birch, pine, beech, elm, chestnut, and the cork-tree in the south. The vine is cultivated to a very great extent (56,034,124 hectolitres of wine were produced in 1920, and 52,461,887 hectolitres in 1919), as the names Bordeaux, Burgundy, Champagne, &c., universally testify; cider-making is also an important industry, and the production in 1913 amounted to 661,868,702 gallons. The live stock included about 15,000,000 cattle, 17,000,000 sheep, and 7,000,000 pigs at the outbreak of the War of 1914-1918. Some reparation of the destruction of the War is to be made under Annex IV. of the *Treaty of Versailles*, whereby Germany undertakes to deliver to the French Government specified numbers of bulls and milch cows, stallions, fillies and mares, rams and sheep, and goats. The mineral resources include, coal (1912, 40,324,777 metric tons), pig iron (4,929,124 metric tons), copper, lead, silver, antimony, and salt. Under Article 50 of the *Treaty of Versailles*, the coalfields of the *Saar Basin* are ceded to France for 15 years, at the end of which time the inhabitants are to decide by a plebiscite whether they will remain French, return to Germany, or become a self-governing community. The coalfields abut on Lorraine, and have an area of 217 square miles, with a population of 640,000, and they include the towns of Saarbrück (60,000), Saarlouis (26,000), and Merzig (10,000), on the River Saar. It is estimated that the coalfields will yield 20,000,000 tons of high-grade coal, and in 1913 the various establishments in the ceded area produced 1,375,000 tons of cast iron and 1,600,000 tons of steel. Under Annex V. of the Treaty, Germany also undertakes to deliver to France 7,000,000 metric tons of coal annually for 10 years, and to make good any deficiency due to War causes in the production of coal in the départements of Nord and Pas de Calais. The most important manufactures are of metals, watches, jewellery, cabinet-work, carving, pottery, glass, chemicals, dyeing, paper-making, woollens, carpets, linens, silk, and lace. Glass manufacture and pottery are also important, and the sardine fisheries and the culture of oysters are a source of wealth.

ARMY.—The *National Army* of France consists of the *Metropolitan Army*, the *Colonial*

Army, the *Gendarmerie*, and *Republican Guard*, and of the partly native armies of *Algeria*, *Morocco*, and *Tunis*. These forces had a total strength on a peace footing (in 1914) of 233,723 all ranks. In the War of 1914-1918 over 20 per cent. of the French people were mobilised, and 9,717,000 all ranks passed into the *Armies of France* (exclusive of troops from *Algeria*, *Tunis*, and *Morocco*). Of this total over 1,500,000 were returned as killed or missing. By law of 1919, the French Army will consist in future of 350,000 all ranks on a peace footing, and of 1,300,000 on a war footing, with a reserve (including *Territorials*) of 2,200,000 all ranks. The French Navy was manned in 1914 by 64,000 officers and other ranks, and consisted in 1919 of 7 Dreadnought and 13 Pre-Dreadnought battleships, 15 armoured cruisers, 18 protected cruisers, 80 destroyers, 153 torpedo boats, and 100 to 120 submarines.

EDUCATION.—The educational system is highly developed. *Central Administration* comprises (a) Ministry of Public Instruction; (b) Superior Educational Council, charged with the actual administration; (c) Consultative Committee (advisory); (d) Educational Bureaux and Inspecting Staffs, whose heads report direct to the Minister. *Local Administration* comprises (a) Territorial Academies, with inspecting staffs for all grades, and (b) Departmental Councils, presided over by the *préfet*, charged especially with primary education. By the Law of July, 1904, all congregationist institutions are to be suppressed within 10 years, and many were at once closed, some re-opening under lay management. (i.) *Primary: Secular, comp. and free.* Age 6-13. Schools include (a) infants; (b) lower primary; (c) higher do. Supplementary courses, and courses for adults. Lower and higher primary certificates granted. Numerous private courses are aided from local funds. Schools are for boys, for girls, or mixed. (ii.) *Secondary: State lycées, communal colleges, and many private establishments, 7-ys. course, either (a) purely classical; (b) purely modern; (c) Latin and sciences; or (d) Latin and modern languages. Degree of Bachelor conferred on completion. For females, a similar organisation, course 5-6 yrs. Sèvres school and the Sorbonne Association well-known. (iii.) Special Schools are very numerous, many public institutions being dependent on ministries other than that of Public Instruction. (iv.) Universities (State universities alone grant degrees, but numerous private faculties and private institutions further higher education): Aix, Algiers, Angers, Bordeaux, Caen, Clermont, Dijon, Grenoble, Lille, Lyon, Marseilles, Montauban, Montpellier, Nancy, Nantes, Paris, Poitiers, Rennes, and Toulouse.*

COMMUNICATIONS.—The principal rivers of France are the Seine, Loire, Garonne, and Rhône. The system of railroads in France is very extensive; they are almost entirely *concessés*, and become State property after the expiration of the concession. The length of lines of general interest, inclusive of local lines, open for traffic on 31 December, 1913, was 25,573 miles, the total receipts from passenger and goods traffic, &c., being £49,426,000. The length of telegraph wires is 122,700 miles, and of telephone lines 27,120 miles. At the end of January, 1913, the mercantile marine, comprising boats of a tons and upwards, amounted to 17,690 vessels of 1,228,528 net tons (of which 15,822 were sailing ships, representing 622,000 net tons). The sums voted by Parliament for

construction and navigation Bounties to Shipping and to Deep Sea Fisheries in 1922 amounted to £1,530,000, and £1,206,772 for Postal and Cable Service Subventions.

Shipping.—The French mercantile marine consisted in 1925 of 1,226 steam vessels above 100 tons, with a total tonnage of 1,909,669 tons, and of 523 sailing vessels above 100 tons, total tonnage 376,119 tons. During the year 1923 the total number of French and foreign vessels entering French ports amounted to 27,409, representing a tonnage of 31,302,807 tons, of which 7,581,374 tons were French, while the total clearings amounted to 28,440 ships of a tonnage of 21,472,968 tons, of which 7,762,519 tons were French. The chief ports are Marseilles, Rouen, Bordeaux, Le Havre, Calais, Boulogne, Dunkirk, and Cherbourg. A bill is to be introduced into the Chamber for the canalisation of the Rhone, which will make the river navigable for 1,200 ton vessels from the sea to Switzerland, and will also provide electric power and irrigation to the surrounding departments.

COMMERCE.—The principal imports are wool, cotton, coal, silk, oleaginous fruits and seeds, machinery, raw skins, cereals, timber, caoutchouc, copper, petroleum oils, coffee, and wines. The principal exports are cotton tissues, silk tissues, wool, woollen tissues, wines, smallwares, automobiles, &c., silks, raw skins, millinery and artificial flowers, dressed skins, tools and metal goods, machinery, pig iron, butter, table fruits, refined sugar, brandy and liqueurs, fish, and cheese.

Exports to U.K. ... 28,408,549 75,836,422

Alsace-Lorraine.—*High Commissioner.* M. Mirhan (1920). Alsace-Lorraine, formerly a part of the Holy Roman Empire, was ceded to France in 1648 at the Peace of Westphalia, and was ceded to Germany by the *Treaty of Frankfurt* (May 10, 1871), after the Franco-Prussian War. At the close of the War, 1914-1918, the Provinces were regained by France under the *Treaty of Versailles* (June 28, 1919). They embrace the fertile plain between the Rhine and the Vosges, and stretch beyond these mountains as far as Luxembourg. Wine, tobacco, hops, iron, and coal are among the leading productions, and the cotton industry is most flourishing. The area is 5,605 square miles; the population in Dec., 1922, was 1,874,024, of whom 965,662 were males and 908,369 females; while 1,428,343 were Catholics, 408,274 Protestants, and 30,483 Jews. Principal towns, Strasbourg (pop. 178,281), Mulhausen, and Metz.

Algeria.—The three departments of Algeria—Algeria, Oran, and Constantine—form an integral part of France, under a Governor-General,

assisted by a Consultative Council. These departments lie between 4° 30' W. to 6° 30' E. longitude, 37° 6' N. to an undetermined S. limit, about 30° N., covering an area estimated in 1906 at about 1,119,416 square miles, with a population (1911) of 5,552,826, of whom 752,043 were Europeans and 4,740,526 natives. The revenue in 1917 was estimated at £5,283,653, and the expenditure at £5,223,226. The bulk of the trade is with France, the exports to France amounting in 1917 to 81.3 per cent. and the imports from France to 67.8 per cent. of the total; the exports to the U.K. in 1917 were valued at £2,300,000, and the imports from the U.K. at £2,159,000. The exports consist mainly of wine, wheat and other cereals, sheep and oxen, skins, fruits, zinc and iron ores, olive oil, phosphates (200,000 metric tons in 1922), cork wood, esparto grass, manufactured tobacco, and vegetables. The principal imports from the U.K. were coal and patent fuel, machinery, cotton oil, cotton tissues, tin plates, clothing, and prepared skins. Iron, copper, quicksilver, zinc, and lead mines are being worked. In 1917 there were 2,172 miles of railroad open for traffic; and in 1917 the number of ships engaged in foreign trade entering and clearing Algerian ports was 4,075, of a net tonnage of 4,357,265 tons. The principal town is Algiers, the capital (population, 1911, 172,397), a most important coaling station and much frequented as a health resort; other large towns are Oran, Constantine, Bône, and Tlemcen. Governor-General, M. Abel.

CAPITAL, Paris. Population (1911), 2,846,986.

FLAG: The "tricolour," three vertical bands. blue, white, red (blue next to flagstaff).

FRENCH COLONIES.

Colony, &c.	Area.	Population.
Indo-China	237,000	18,000,000
Asia Minor	150,000	4,500,000
Africa	4,100,000	43,500,000
America	33,000	500,000
Oceania	20,000	100,000
Total	4,530,400	66,600,000

In ASIA.—French India includes Pondicherry,
 on the Coromandel coast; Chandernagore, on
 the Hooghly; Karikal, in the Carnatic delta;
 Yanaon, in the Godavary delta; and Mahé, on

the Malabar coast—the total area being 200 square miles with an estimated population of 277,700. *French Indo-China* comprises the possession of Cochin-China and the four protectorates of Cambodia, Annam, Tonkin, and Laos. In 1893-4 the port of Kwang-Chow-Wan was also acquired on lease from China. The capital is Hanoi, in Tonkin, and the total area is 309,779 square miles, with a population (1912) estimated at 16,600,000.

In ASIA MINOR.—The French mandatory sphere of Syria, Cilicia and Lebanon has a total area of about 250,000 square miles, with an estimated population of 4,500,000 (see also pp. 830-1).

In AFRICA.—*Algeria* (see above) is an integral part of France. *Morocco* (see p. 807-8) is a French (and partly Spanish) protectorate.

Tunisia has been a French protectorate since 1881. It lies between Algeria and Tripoli, and extends southwards to the Sahara, with a total area of about 45,000 sq. miles and an estimated population of 2,000,000, of whom about 600,000 are Berbers and 500,000 Arabs. The valleys of the northern region support large flocks and herds, and contain rich agricultural areas, in which wheat, barley, and oats are grown. The vine and olive are extensively cultivated. The principal minerals are coal, copper, lead, zinc and iron, and phosphates and marble are also worked. The chief exports are phosphates, olive oil, wheat, esparto grass, barley, beans, blankets, sponges, and dates; the chief imports are textiles and other manufactures, iron, steel, machinery and provisions. Eighty per cent. of the trade is with France and Algeria. Tunis, the capital, has a population of 230,000; other towns are Sfax (84,000), Bizerta (30,000), Suse (30,000), Kairwan (22,000), Gabes (16,000), and Monastir (6,000). *French West Africa* extends from Mauritania to Dahomey, and has a total area of 1,509,733 square miles, and a population of 11,344,076. It consists of *Senegal* (94,000 sq. miles, pop. 1,250,500), capital, St. Louis; *Upper Senegal Niger* (304,000 sq. miles), and the *Niger Military Territory* (533,000 sq. miles), which have a total population of about 6,036,000; *French Guinea* (92,600 sq. miles, pop. 1,737,350); *Ivory Coast* (126,200 sq. miles, pop. 1,216,500); and *Dahomey* (38,000 sq. miles, pop. 878,500); adjoining Dahomey is the French Sphere of the former German colony of *Togoland* (23,400 sq. miles, pop. 800,000); while the hinterland of these colonies forms the *French Sahara*, which has an estimated area of 924,160 sq. miles and a population of about 450,000. *French Equatorial Africa* consists of the *French Congo* (513,000 sq. miles, pop. 9,000,000) and of the French Sphere in the former German territory of *Cameroon* (267,000 sq. miles, pop. 2,750,000). *French East Africa* consists of the *Somali Coast* (46,300 sq. ms., pop. 208,000) and of the large island of *Madagascar* (226,000 sq. miles, pop. 3,253,500) with its dependencies (Nosé Bé, Sainte Marie, Réunion, and the Mayotte-Comoro Islands, and St. Paul, Amsterdam, and Kerguelen Islands). Agriculture and cattle raising are the principal industries; the minerals include gold, silver, iron, copper, lead, and zinc. The chief exports are gold, cattle, bark, manioc (for arrowroot), beans, hides, skins, fibre, rice, timber and rubber; the chief imports are cottons, metal manufactures, wines and spirits, coal, clothing, lime and cement. The capital, Antananarivo, has a population of 75,000; other

towns are Tamatave (the chief port), Majunga, Diego-Suarez, Mamangary, Tuléar, Andovoranto and Vohémar. Off the south-east coast are the uninhabited islands of St. Paul, Kerguelen and Amsterdam. There is now direct communication across French and British territory in Africa, with posts on the Atlantic and Indian ocean.

In AMERICA.—Off the south-east coast of Newfoundland are two small groups of islands, of which the largest are St. Pierre and Miquelon. In the West Indies, Martinique and Guadalupe, with Basse Terre, Marie Galante, Ile des Saintes, Petite Terre, St. Bartholomew, and St. Martin; and in South America, Cayenne or French Guiana. The total area of French possessions in North and South America is 35,300 square miles, with a population of 428,850.

In AUSTRALASIA.—New Caledonia (7,200 sq. ms., pop. 50,500) is a large island with many dependencies, and the Society Islands (Tahiti, &c.) and other islands have a total area in the Pacific Ocean of 8,378 square miles, with a population estimated at 81,200. The New Hebrides are under joint Franco-British administration.

Reconstruction,

Ambassador in London, Dr. Friedrich Sthamer,
9 Carlton House Terrace, S.W. 1.
Consular Dept. of the Embassy, 22 Bedford Place, W.C. 1.

At the outbreak of war, Aug., 1914, "Germany" was a Confederate League, bearing the name "German Empire," under the hereditary presidency of the King of Prussia, holding the title of "German Emperor." The German Empire had a total area in Europe of 208,769 sq. miles, and consisted of the following 26 States:—Prussia (including Lauenburg and—since 1890—Heligoland); Bavaria; Saxony; Württemberg; Baden; Hesse; Mecklenburg-Schwerin; Saxe-Weimar; Mecklenburg-Strelitz; Oldenburg; Brunswick; Saxe-Meiningen; Saxe-Altenburg; Saxe-Coburg-Gotha; Anhalt; Schwarzburg-Sonderhausen; Schwarzburg-Rudolstadt; Waldeck; Reuss (elder line); Reuss (younger line); Schaumburg-Lippe; Lippe-Detmold; Reichsland (Alsace-Lorraine); Lübeck; Bremen; Hamburg; with a census population (1910) of 64,025,993, of whom 32,031,967 were males and 32,971,456 females.

By the *Treaty of Versailles* the "Reichsland" of Elsass-Lothringen and the Saar coal basin (temporarily) were ceded to France; parts of

Posen and West Prussia to the newly-formed Republic of Poland; North Schleswig to Denmark; and Meranet and Malmédy to Belgium. Plebiscites held in June 1920 in parts of East and West Prussia yielded majorities for Germany. A plebiscite to decide the fate of Upper Silesia was held under the Peace treaty. On March 7, 1921, negotiations between German representatives and the Supreme Council of the Allies on the methods of payment of the claims for reparation having broken down, the forces of the Allies (which were in occupation of "bridge-heads" across the Rhine) advanced to Duisburg, Ruhrort, and Düsseldorf on the right bank, and a general control was established over the customs administration.

The Colonial possessions of the German Empire extended over 1,035,086 sq. miles in Africa, 96,210 sq. miles in the Pacific, and 2,943 sq. miles in Asia—a total of 1,134,239 sq. miles, with a population estimated in 1914 at 15,000,000. By the *Treaty of Versailles* Germany renounced her overseas possessions, with all rights and titles therein, and the delegates to the International Council at Paris allocated Togoland and Kamerun to Great Britain and France; German East Africa to Great Britain; German S.W. Africa to the Union of South Africa; the German Pacific possessions N. of the Equator to Japan; and those S. of the Equator to Australia and New Zealand.

On Nov. 9, 1918, the German Emperor abdicated, and the Government of the country was taken over by the Council of the People's Commissioners in Berlin. On Nov. 11, 1918, Germany was granted an armistice, and on June 28, 1919, peace was signed at Versailles. In Jan. 1919, elections were held to a National Assembly on the basis of universal adult suffrage (male and female), and on Feb. 11, 1919, the first President of the German *Versammlung* was elected at Weimar. Under the new Constitution of August 11, 1919, the federal legislature consists of a *Reichstag* representing the whole nation and elected by popular suffrage (male and female), with proportional representation, and a *Reichsrat* representing the separate States. The people possess the right of initiative and the referendum. Bills dealing with economical questions or social issues arising thereout must first be submitted to the new advisory Economical Council (*Reichswirtschaftsrat*).

A counter-revolution in the Junker (aristocratic) interest was temporarily successful in March, 1920, and the President and Cabinet abandoned the capital; but in a few days the revolutionaries capitulated and the Republican administration resumed direction and control.

The religious confessions of the people of the former German Empire were divided in 1920 as follows:—39,991,421 Protestants, 23,821,453 Roman Catholics, 283,946 Christians of other categories, 615,021 Jews, and 214,125 adherents of other religions, or unknown.

There are 44 large towns with over 100,000 inhabitants, and of these 30 are in Prussia, 4 in Saxony, 3 in Bavaria, 1 in Baden, and 1 each in Württemberg, Hesse, and Brunswick, while two of the three Hanse Towns also exceed 100,000.

PRODUCTION AND INDUSTRY.—Germany, up to the commencement of the War, was becoming more and more a manufacturing country. In 1917, 32.6 per cent. of the population were supported by agriculture, 37 per

cent. by industry and mining, 11.5 per cent. by trade and communications. Of the total area in 1907, 74,539,122 acres were under cultivation, and 34,774,121 acres were woods and forests. The Live Stock (Oct. 1, 1920) included 2,450,000 horses, 26,350,000 cattle, and 12,000,000 pigs; large numbers of these animals were ceded to France and Belgium (as part of the reparation) under the *Treaty of Versailles*. Germany supported about nine-tenths of her population by her own produce in 1914. The mineral produce was valued in 1912 at £592,250,000, and included 190,209,440 tons of coal, 87,233,084 of lignite, and 28,607,903 of iron ore; potash, rock-salt, lead-ore, gold and silver ore, graphite, asphalt, petroleum, Epsom-salts, boracic, tin-ore, quicksilver-ore, antimony-ore, cobalt-ore, nickel-ore, arsenic-ore, manganese-ore, bismuth-ore, uranium-ore, wolfram-ore, pyrites, vitriol-ore, and alum-ore are also worked. Cröfeld, Elberfeld-Barmen, Chemnitz, Augsburg, and the provinces of Westphalia and Silesia are the great centres of the textile industries. By laws of 1919 and 1920, all coal, heavy iron and steel, potash and coal-tar producing concerns were compulsorily fused into All-German Syndicates, governed by assemblies representing Producers, Traders and Consumers, with equal representation for Employers and Employed.

OLD AGE AND INFIRMITY INSURANCE.—The German scheme of social legislation gives all subordinate bread-winners in Germany a legal right to pecuniary subvention when unfitted for work through sickness, accident, premature infirmity, or old age. Insurance is compulsory. This National Insurance is based on mutual insurance and self-administration. The Infirmary Insurance Act came into force Jan. 1, 1900. The insured include all persons working for wages or salary as workpeople, artisans, journeymen, apprentices, domestic servants, laundresses, dressmakers, sempstresses, housekeepers, charwomen; overseers, foremen, engineers, assistants, clerks and apprentices in merchants' offices (excepting assistants and apprentices in chemists' shops), schoolmasters, schoolmistresses, tutors and governesses—in so far as the incomes do not exceed £100—including foreigners working in Germany under these categories. Pensions for premature infirmity are given to insured persons when unfit for work; old age pensions to all insured persons on attaining the age of 70, though still capable of work. A comprehensive project of reform of the State insurance legislation became law in 1911. The new law codified previous legislation, established new Insurance Authorities, reduced working-class influence in the Accident Insurance organisations, provided pensions for widows and orphans, and made other changes of importance. Another Bill extending Insurance benefits to private officials, clerical employes and others above the class of manual workers, became law in 1911. A Bill establishing Federal Unemployment Insurance for industrial workers (not farm labourers or domestic servants), clerks, actors and orchestra musicians, and a Bill providing a Federal Labour Exchange Organisation, are before the Reichstag.

DEFENCE.—In the War of 1914–18 the German armies reached their zenith as a military machine during the German Offensive movement of July, 1918, when 207 divisions were available on the Western Front. At the close of the Armistice (Nov. 11, 1918) only 224 divisions

were available, and the reserves had dwindled from a proportion of over one half of the troops in action to that of one-eleventh only, while the 24 divisions were scarcely 6,000 strong, all ranks. By the grant of an armistice the German armies escaped further encounters with the Allied Armies, the reserves of which were increasing in numbers every day, while their strategical position was becoming every day more satisfactory to Marshal Foch, their generalissimo. By Article 260 of the *Treaty of Versailles* the German *Military Forces*, as from March 31, 1920, must not comprise more than seven divisions of infantry and three divisions of cavalry, a total force of 100,000 all ranks. By Article 182 of the *Treaty*, the German *Naval Forces* must not exceed 6 battle-ships of the Deutschland or Lothringen class, 6 light cruisers, 12 destroyers, and 12 torpedo boats. No submarine vessels are to be included in the naval forces, and all war vessels in excess of the above numbers are to be broken up or devoted to commercial purposes. Under the terms of the Armistice of Nov. 11, 1918, the German High Sea Fleet surrendered to the Allies (Nov. 21, 1918) and was interned in Scapa Flow, manned by German naval crews. It was scuttled by its crews in Scapa Flow, while in custody, on June 21, 1919. In consequence of this breach of the Armistice agreement by the German crews the Allies (Nov. 10, 1919) called upon the government to surrender 5 light cruisers, and certain floating docks, cranes, and dredgers, in addition to the previous naval surrenders. The interned vessels Berlin, Seydlitz, Santa Fe and Yorck are to be disarmed and treated as merchant ships. By Article 198 of the *Treaty*, the armed forces of Germany must not include any military or naval *Air Forces*, and no dirigible balloons, aeroplanes, sea-planes or flying boats.

COMMUNICATIONS.—The total length of the *Railroads* in 1913 was 37,823 miles, of which about 98 per cent. belonged to the different States. On April 1, 1920, all the State Railways passed to the Federal Government. There are 1,500 miles of inland canals and 1,600 miles of ship canals. The number of registered automobiles and motor cycles (January 1, 1913) was 77,789. Length of *Telegraph Lines* 228,600 kilometres (length of wires, 1,907,200 kilometres); telegrams handed in, 49,533,000; post offices, 41,415; telegraph offices, 50,073; wireless stations, 14; telephone call-stations, 37,970; letters delivered, 5,994,300,000; cash on delivery orders, £640,200,000; money orders, £4,665,500,000; telegrams despatched, 49,533,000; telegrams received, 49,643,000. The number of employes in the service of posts, telegraphs, and telephones was 310,363. The State postal services were taken over by the Federal Government in 1920. In addition to some 6,000 miles of navigable rivers there are over 1,500 miles of canals and 1,600 miles of ship canals. At the outbreak of the War of 1914-1918 Germany ranked second to Britain in the list of maritime countries. On January 1, 1913, the Mercantile Marine consisted of 2,098 sea-going steamers of 1765 register tons and upwards (4,360,368 tons gross register), and of 2,420 sailing vessels (447,870 tons gross register); number of seamen, 77,746 (January 1, 1912, 75,130). There were completed in 1920 at German yards for German firms, 639 sea-going ships of 383,090 tons gross, and at German yards for foreign firms, 124 sea-going ships of 31,328 tons gross. Eleven new shipyards

were established during the War. Some of the larger ships were interned in foreign harbours during the War, and by the *Treaty of Versailles* reparation is to be made for the losses inflicted on the Allies by the surrender of merchant ships. The chief ports of Germany are Hamburg, on the Elbe; Bremen, on the Weser; Stettin, on the Oder; Königsberg, on the Pregel; Kiel, on the Baltic (connected with the Elbe by the Kaiser-Wilhelm Canal); and Lübeck, on the Baltic. Under the Peace Treaty Danzig became a Free State, subject in its foreign affairs to the Polish Republic.

FINANCE.—Under Articles 248-253 of the *Treaty of Versailles* the German Government undertook to pay the cost of the Armies of Occupation from Nov. 11, 1918, until they shall be withdrawn, the occupied area extending to the Rhine (with "bridgeheads" on the right bank) from Eiten, on the Netherland's frontier, in the north, to the junction of the German-Lorraine frontiers, in the south. The amount of the reparations due by Germany under the *Treaty* was fixed in January, 1921 (by the Financial Council of the Allies at Brussels) at 132 milliards of gold marks (£6,600,000,000) payable in bonds, to be redeemed by annual payments of a milliard gold marks, together with a sum equivalent to 26 per cent. of German exports. Of the amounts thus payable the various shares from 1921-1929 were apportioned to France 52 ninety-second parts, Great Britain 22, Italy 10 and Belgium 8 ninety-seconds; from 1929-1932 the shares are varied to France 130 two hundred and thirtieth parts, Great Britain 55, Italy 25 and Belgium 20 two hundred and thirtieths; and for the succeeding 31 years France 156 two hundred and seventy-six parts, Great Britain 66, Italy 30 and Belgium 24 two hundred and seventy-six parts.

German Budget, 1921-22.

	1921.	1922.
Budget Expenditure (Ordinary)...	46,945,202,051	
Budget Revenue (Ordinary).....	46,945,202,051	
Expenditure (Extraordinary).....	43,667,104,308	
Revenue (Extraordinary).....	20,556,468,118	
Including Reparations, the total Expenditure is estimated at about 150 milliards, towards which only about 80 milliards Revenue are provided under a pending Financial Reform.		

The Funded Debt (which stood at 5,000,000,000 marks on April 1, 1921) amounted on May 31, 1921, to 78,345,000,000 marks, and the Floating Debt to 199,134,000,000 marks.

German Trade.

Exports to U.S.	37,500,000	35,304,000

FORMER GERMAN KINGDOM.

PRUSSIA.

GOVERNMENT (April 28, 1921).

President, Herr Stegerwald.
Interior, Herr Dominicus.
Finance, Herr Skiminich.
Agriculture, Herr Warmbold.

* The weight of the imports in 1920 is given as 12,200,000 tons, but their value is not stated; the weight of the exports in 1920 was 22,800,000 tons, valued at 69,204,176,000 marks (paper).

consisting chiefly of salt, iron, granite, limestone, ironstone, freestone, &c., abound in the kingdom; mineral springs are also numerous. The principal rivers are the Neckar and the Danube. The manufactures generally are linen, woollen and cotton fabrics, carpets, paper, leather, gunpowder, firearms, tobacco, iron and steel goods, pianos, clocks, pottery, cabinet work, &c. There are also many oil mills, breweries, and brandy distilleries. The principal exports are grain, cattle, wood, gunpowder, firearms, pianos, clocks, salt, oil, leather, woollen, hosiery, cotton and linen fabrics, staves, beer, wine, &c.

	Marks
Revenue, 1918-19	135,734,985
Expenditure	143,027,378
Public debt (31st 12th)	686,846,300
CAPITAL, Stuttgart. Population (1910) 285,589.	

FORMER GRAND DUCHIES.

Baden, separated by the Rhine from France (Alsace) and Switzerland, has an area of 5,819 square miles, with a population (1910) of 2,122,833. A great part of the surface is mountainous and covered with forest trees, including the Schwarzwald (Black Forest) and the Odenwald, but more than three-fifths of the total area is under cultivation, corn, wine, fruit, potatoes, tobacco and hops being the chief agricultural products. The principal manufactures are cigars, cotton and silk stuffs, brushes, jewellery and trinkets, clocks, chemicals, paper and machinery. More than half the population are Roman Catholics. Capital, Karlsruhe, pop. (1910) 134,313. Other large towns are Mannheim (206,049), Friburg (83,324), Pforzheim (73,786), and Heidelberg (56,016).

Hesse, in the West Centre, consists of Northern and Southern portions, nearly equal in size, on either side of the Main River, with a total area of 2,968 square miles and a population (1910) of 1,282,051, of whom more than half are Protestants. The country is mountainous but fertile, and agriculture is flourishing. Capital, Darmstadt, pop. (1910) 87,089. Other large towns are Mayence (Mainz) at the confluence of the Main and the Rhine (110,634), Offenbach (75,583), Worms (46,829), and Giessen (31,533).

Mecklenburg, between the Elbe and the Baltic, has a total area of 6,266 square miles, with a population (1910) of 746,400. Agriculture and stock raising are the principal industries, the Mecklenburg breed of horses being famous. The chief manufactures are bricks and machinery. Capital, Schwerin, pop. (1910) 42,519. Other centres are Rostock (65,383), Wismar (27,376), and Neu-Strelitz (11,993).

Oldenburg, on the North Sea, between the estuary of the Weser (at Bremen) and the Prussian province of Hannover, has detached territories in Lubeck (between Holstein and Mecklenburg) and Birkenfeld (Rhine Province of Prussia). The total area is 2,479 square miles, with a population (1910) of 283,424, of whom more than 80 per cent. are Protestants. The chief industries are agriculture, bee-keeping and stock-raising; the principal manufactures are brewing and distilling, tanning, tobacco and cork. Capital, Oldenburg, pop. (1910) 28,565.

Saxe-Weimar-Eisenach (now part of the new Thuringian State) consists of Weimar, Eisenach, and Ronneburg, and 24 scattered enclaves in the Thuringian Forests of Central Germany. The total area is 1,397 square miles,

with a population (1910) of 457,122, of whom the majority are Lutherans. Agriculture, fruit growing and horticulture are the principal industries, the manufactures including brewing, chemicals, woollens and hosiery. Capital, Weimar, pop. (1910) 34,522. Other centres are Eisenach (38,362), Jena (38,427), and Apolda (22,620).

FORMER DUCHIES.

Anhalt, 906 square miles, pop. (1910) 321,128; is in Northern Germany. Capital, Dessau, pop. (1910) 56,605.

Brunswick, 1,418 square miles, pop. (1910) 494,339; in Northern Germany. Capital, Brunswick, pop. (1910) 143,552.

Saxe-Altenburg, 518 square miles, pop. (1910) 216,128; in East Central Germany. Capital, Altenburg, pop. (1910) 39,976.

Saxe-Coburg-Gotha (now part of Bavaria), 763 square miles, pop. 257,177; in Thuringia, Central Germany. Capital, Gotha, pop. (1910) 39,553. Coburg, pop. (1910) 23,789.

Saxe-Meiningen, 945 square miles, pop. 278,792; in Thuringia, Central Germany. Capital, Meiningen, pop. (1910) 17,131.

FORMER GERMAN PRINCIPALITIES.

Lippe, 470 square miles, pop. (1910) 120,937; Capital, Detmold (14,295). **Reuss (Elder Line)**, 120 square miles, pop. (1910), 72,769; Capital, Greiz (23,245). **Reuss (Younger Line)**, 320 square miles, pop. (1910) 152,752; Capital, Gera (49,276). **Schaumburg-Lippe**, 130 square miles, pop. (1910) 46,626; Capital, Bückeburg (6,745). **Schwarzburg-Rudolstadt**, 363 square miles, pop. (1910) 120,702; Capital, Rudolstadt (12,937). **Schwarzburg-Sondershausen**, 333 square miles, pop. (1910) 89,917; Capital, Sondershausen (7,759). **Waldeck**, 438 square miles, pop. (1910) 61,707; Capital, Arolsen (2,793).

LAND THÜRINGEN.

The seven Thuringian States, Saxe-Weimar-Eisenach, Saxe-Meiningen, Saxe-Altenburg, Schwarzburg-Rudolstadt, Schwarzburg-Sondershausen, Reuss-Greiz and Reuss-Gera, have been constituted into a single state under the title Land Thüringen, with an area of 11,000 square kilometres, a population of 1,500,000, and two seats in the Federal Reichsrat. In size Land Thüringen is seventh among German states. The new state is governed by a "Volkrat." Saxe-Coburg-Gotha has joined the Bavarian Republic.

HANSE TOWNS.

The *Free Hanse Towns* comprise the three cities of **Lubeck**, on the Trave (area 115 square miles, pop. 116,599), **Bremen**, on the Weser (area 99 square miles, pop. 313,433), and **Hamburg**, on the Elbe (area 160 square miles, pop. 1,075,420). Each has a small rural territory and has full Federal independence, with a Council of State (under the Presidency of a Burgomaster).

TRADE FLAG: Black, white and red with the National Colours (black, red and gold) in the first quarter, next the staff.

CAPITAL OF THE GERMAN REPUBLIC.

Berlin, pop. (1910) 2,070,696.

BRITISH EMBAZY.

British Ambassador, His Excellency the Rt. Hon. Lord D'Abernon, G.C.B., C.V.O. (1919-20). **Counsellor**, Lord Kilmarock, C.M.G. **and Counsellor**, Joseph Addison.

1st Secretary, Sir R. P. S. Head, Bart.
and Secretaries, J. B. Carson, M.C.; R. C. S. Stevenson.

3rd Secretary, P. M. Broadmead.
Honorary Attaché, Hon. J. Hay.
Commercial Secretary, Col. J. W. F. Thelwall, M.C.

Junior Commercial Secretaries, Major C. J. Kavanagh and H. N. Sturrock.

British Commissioner, Inter Allied Rhineland Commission, Malcolm Arnold Robertson, C.M.G.

Archivist, E. S. Fothergill.

BRITISH CONSULAR OFFICES.

Berlin—Consul-General, A. C. Charlton.

Vice-Consul, K. J. M. White (acting).

Stettin—Vice-Consul, H. Kelsall.

Pro-Consul, A. T. H. Evans.

Bremen—Consul, G. B. Gilliat-Smith.

Pro-Consul, G. Payne.

Bremerhaven—Vice-Consul, J. H. Magowan.

Cologne—Consul-General, E. W. P. Thurstan, C.M.G.

Vice-Consul, R. C. Stevenson (acting).

Pro-Consul, C. Ralph Curtis.

Düsseldorf—Vice-Consul, L. E. Mackinder.

Essen—Vice-Consul, R. P. F. Edwards, D.S.O.

Pro-Consul, G. F. Griffin.

Frankfurt-on-Main—Consul-General, C. W. Gosling.

Vice-Consuls, A. C. Hemsley, D. M. M. C. Somerville (acting).

Pro-Consul, A. J. P. Butler.

Hamburg—Consul-General, Francis A. Oliver.

Vice-Consul, J. R. M. Fell; R. G. Goldie (acting).

Leipzig—Consul, R. M. Kohan.

Pro-Consul, C. Fuller.

Chemnitz—Vice-Consul, H. Monk.

Munich—Consul-General, W. Seeds.

Consul, R. T. Smallbones.

GREECE.

King of the Hellenes, Constantine, born Aug. 3, 1868, succeeded to the throne, March 26, 1913; married, Oct. 28, 1899, the Princess Sophia, sister of William II., German Emperor; resumed Royal functions, Dec. 19, 1920.

THE MINISTRY (April 8, 1921).

Prime Minister and Minister of Justice, M. D. Gounaris.

Interior, M. S. Stais.

Marine, M. P. Mavromichalis.

Finance, M. P. Protopapadakis.

War, M. N. Theotokis.

Foreign Affairs, M. G. Baltazzi.

Education, M. Th. Zaimis.

National Economy, M. J. D. Rhallys.

Envoy Extraordinary and Minister Plenipotentiary in London, (vacant). Legation, 51 Upper Brook St., W. 1.

Chargé d'Affaires, M. A. Rizo-Rangabé.

Secretaries, M. M. Yanopoulos; M. D. Bikelas.

Consul-General, M. D. Ingialis (acting), 36 Gordon Square, W.C. 2.

A maritime Kingdom in the south-east of Europe, bounded on the N. by Albania, Yugoslavia and Bulgaria, on the S. and W. by the Ionian Sea, and on the E. by the Aegean, Sea of Marmora and Black Sea, with an estimated area of 69,000 sq. miles and an estimated population (1921) of 3,000,000 (exclusive of the area and population of Northern Epirus).

Government.—Greece became a kingdom in 1830, after a successful insurrection against the Turkish government, to which the country had been subjected since the 15th century. The legislature consists of a Chamber of Deputies (or *boule*) elected for 4 years by universal manhood suffrage, and of a Council of State. Members of the legislature are paid 4,000 *drachmae* annually. At the outbreak of the Great War the sympathies of the reigning house of Greece appeared to be with the Central Powers, but under the influence of M. Venizelos the Kingdom eventually entered the War on the side of the Allies, and King Constantine abdicated (June 11, 1917). King Alexander, who acceded to the throne, died from the effects of a monkey-bite, Oct. 25, 1920. The crown was offered to his younger brother Paul, a Regency being meanwhile proclaimed under Admiral Coundouriotis. The November elections drove the Venizelists from office, and the Regent, having admitted M. Rallis to the Premiership, was called upon to resign. He was succeeded by Queen Olga, until a plebiscite was taken, and King Constantine was thus restored to the throne in December 1920.

Prior to the Balkan Wars of 1912-13 the area was less than 25,000 sq. miles, the addition of portions of Macedonia and Epirus, Crete (2,950 sq. miles, pop. 336,151), and certain Aegean Islands increasing the area to 43,522 sq. miles. During the War of 1914-1918 Greece eventually declared for the Allies against the Central Powers, and her territories were increased by the occupation of Thrace (including the monastic republic of Mount Athos), and the islands of Imbros and Tenedos. Under an arrangement with Italy, to come into effect after the ratification of the Treaty of Sevres, the Dodecanese (12 islands) are surrendered by Turkey, and these are to be handed over to Greece by Italy with the exception of Rhodes, for which a special arrangement is made. Greece also receives under the Treaty a mandate for the occupation and administration of the town and district of Smyrna, which remain, however, under Turkish suzerainty; in this region of Anatolia prolonged fighting took place in 1921 between the Greek Expeditionary forces and local Turkish armies, with varying fortunes. In addition, Greece will receive an extension of frontier in Epirus, the limits of which are not yet fixed. The country is thus composed of a continental portion (the southern part of the Balkan Peninsula), of islands in the Aegean, Mediterranean, and Ionian Seas, and of a portion of the mainland of Asia Minor. The surface is nearly all mountainous; the coasts are elevated, irregular, and deeply indented.

Production.—Agriculture is the principal industry and employs more than half the population. The most important of the fruit trees are the olive, the vine, orange, lemon, fig, almond, citron, pomegranate, and currant-vine. The principal minerals are silver, lead, zinc, emery, copper, magnesium, sulphur, salt, and marble. The chief manufactures are smelting, textiles, and shipbuilding. The imports are cotton and other manufactures, corn, timber, cattle, hides, sugar, salt fish, and coal. The exports consist of wine, olives, olive oil, tobacco, currants, figs, cognac, hides, lead, iron ore, magnesite, iron pyrites, chrome ore, emery, marble, and sponges. The imports in 1920 were, from Gt. Britain, 220 million *drachmas*; U.S.A. 227 million; Italy 125 million; France 209 million; and other

countries 333 million. The exports were, to U.S.A., 40 million; Gt. Britain, 37 million; Italy 25 million; France, 20 million; and other countries 176 million.

Defence.—Service in the Army is universal and compulsory between the ages of 21 and 57. Both the land and sea forces were reorganised during the War of 1914-1918, and about 150,000 all ranks fought with the Allied Armies. The Navy consisted (July, 1919) of 6 ironclads, 1 modern cruiser, 14 destroyers, 6 torpedo-boats, and 2 submarines.

Education is free and compulsory, maintained by local taxation supplemented by State grants. Secondary education is somewhat backward, particularly in the country districts. The University at Athens is of some repute.

Finance.—The debt in 1912 was 1,040,900,000 drachmae, and the Balkan Wars of 1912-13 added 354,960,000 drachmae, the Great War added 1,028,000,000 drachmae, and subsequent military operations to March, 1921, were responsible for 1,776,140,000 drachmae.

Communications.—There were (1919) 1,400 miles of railroad open for traffic. There is a ship canal cutting through the Isthmus of Corinth for ships up to 1,500 tons. The post offices (in Old Greece) number 1,150, dealing with 36,000,000 postal packets; telegraphs, 4,951 miles. The mercantile marine consists of 110 sailing vessels above 100 tons capacity, and 208 steamers (449,184 tons). The principal harbours are the Piræus (port of Athens), Syra, Patras, Salonica, Volo, Corfu, Kalamata, Laurium, Cavalla, Canea (Crete), and Smyrna (Asia Minor).

	1919-20 *Drachmae.	1921-22 *Drachmae.

GUATEMALA, Republic of.

President (1920-1924), Carlos Herrera, born 1856, assumed office March, 1920.

Min. of Foreign Affairs, Don Luiz P. Aquirre.

Minister in London M. Arroyo.

Consul in London, D. Bowman, 11 Queen Victoria Street, E.C. 4.

Guatemala, the most northerly of the Republics of Central America, is situated in N. lat. from 13° 45' to 17° 49', and in W. Long. from 88° 12' 49" to 92° 13', 43' and comprises an area of 42,456 square miles, and a population in 1920 of 2,200,000. The Republic is divided into 23 departments, and is traversed from W. to E. by an elevated mountain chain, containing several volcanic summits rising to 13,000 feet above the sea; earthquakes are frequent, and the capital was destroyed by an upheaval in Jan., 1917. The country is well watered by numerous rivers; the climate is hot and unhealthy near the coast, but more temperate and salubrious in the higher regions. About 620 miles of railway were open for traffic in 1917. There were 4,057 miles of telegraph working in 1917. The chief ports are San José de Guatemala and Champerico on the Pacific, and Livingston and Puerto Barrios on the Atlantic side. The principal export is coffee, other articles being sugar, rubber, hides, bananas, and timber. Spanish is the language of the country.

HAITI, Republic of.

President, M. Sudre Dartinguenave,
assumed office Aug. 12, 1915 £4,800
Foreign Affairs, Justin Barau.

Chargé d'Affaires and *Consul-General*, Abel
Théard, 6 Trevanion Road, West Kensington.

The Republic of Haiti is the western or French portion of the island of San Domingo, which, next to Cuba, is the largest of the "West India" Islands.

The island was visited on Dec. 6, 1492, by Christopher Columbus, who named it *Espagnola*, the native name being *Haiti* (mountainous) or *Quisqueia* (vast). The Spaniards explored the island and almost exterminated the 2,000,000 native Indians, whom they replaced with African negroes. By the Treaty of Ryswick (1697) the western portion of the island was ceded to France, and in 1803 the territory was abandoned by the French, and a republic was proclaimed under the aboriginal name of Haiti. In 1822 the rule of the Haitian President was extended over the whole of the island, the eastern portion having declared its independence of Spain in 1821. Since 1844 the eastern portion has formed a separate republic (see Dominican Republic).

The area of the republic is 10,200 square miles, with a population estimated at 2,500,000. The mountains are richly and heavily timbered, and susceptible of cultivation nearly to their summits; it is probably the most fertile spot in the West Indies, whilst its harbours, especially Port-au-Prince, offer considerable facilities to foreign trade. The principal productions are coffee, logwood, cocoa, cotton, hides, sugar, honey, gums and oilseeds, these being the chief exports. It is said to contain mines of gold, silver, copper, tin, and iron. Its commercial prosperity has been almost annihilated by repeated revolutions. In November, 1915, both Houses of the Congress ratified a treaty with the U.S.A., establishing a virtual protectorate over the Republic, which came into effect in May, 1916. An armed Constabulary, rural and urban, under American officers, has been constituted, and a coastguard service is attached. On Nov. 27, 1920, some prominent Haytiens met and formed the "Union Patriotique," an association for raising funds by public subscription all over the country for the purpose of sending delegates to plead the cause of the Haytian people. It was arranged to send a delegation of three members to New York and Washington, and on the 6th of February last two of them left, the third following two months later. It appears that the Haytian cause has found supporters there, and as a result of the visit of this delegation a Senatorial Commission of enquiry is expected to visit the island shortly. The Constitution was amended in June 1918, and under its provisions the President is elected for four years and there is an elective legislation. The principal foreign trade is carried on with the United States, Great and Greater Britain, France, and

Germany. French is the language of the country.

THE HEJAZ, Sec Arabia.

HONDURAS, Republic of.

President (1920), General Rafael Lopez Gutierrez.

Consul-General in London, A. B. Ryde, 4 Lloyds Avenue, E.C. 3.

The Middle State of Central America, stretching in N. lat. between 13° 10' and 16°, and W. long. between 83° 10' and 88° 40'; containing 44,275 English square miles, with a population estimated at 627,000 (1910).

Christopher Columbus landed at Cape Honduras in 1502, and in 1524 the country was settled by the Spaniards. In 1525 Hernando Cortes founded the city of Puerto Cortes and from 1530 to 1822 the country formed part of the Captaincy-General of Guatemala. From 1821 to 1839 Honduras was included in the Confederation of Central America.

The Republic of Honduras has a coast-line of nearly 400 miles on the Caribbean Sea, chief ports, Truxillo, Puerto Cortes, Omoa, Roatan, and La Ceiba; but only about 40 miles on the Gulf of Fonseca, on the Pacific side, chief port, Amapala. (NOTE.—Amapala is on Tiger Island, port on mainland is San Lorenzo, 3 hours in gasoline launch from Amapala. From San Lorenzo by auto to capital, Tegucigalpa, 88 miles, good road, 5-6 hours. Road from Tegucigalpa to N. coast now reaches Comayagua and the journey can be made to Comayagua in 4 hours. From there to end of railroad, 3 to 4 days by mule. A through road for automobile traffic is expected to be open early in 1922 from Comayagua to Pito Solo, at S. end of Lake Yojoa, and work is in progress for the extension of the national railway from Potrerillos southwards to the N. end of the Lake, thus completing direct inter-oceanic transport communication. When this route is open New York will be only 7 days from Tegucigalpa.) The country is mountainous, being traversed by the Cordilleras. The soil is very fertile, the products being mahogany, fruit, cattle, cotton, sugar, rubber, rice, tobacco, coffee, indigo, sarsaparilla, hides

and skins, indiarubber, cedar, fustic, rose, henecoun, and Lima wool. There is an immense amount of uncultivated land. The number of cattle in 1920 was approximately 900,000. The forests are practically inexhaustible, but there is a lack of communications and transport. Its mineral wealth is great. In 1920 there were 763 kilometers of railway open, all on the North Coast. The language of the country is Spanish.

	1917-18.	1918-19.	1919-20.

Hungary was declared a Republic on Nov. 17, 1918, its territories being decreased from the area of the former Kingdom of Hungary (which was united to the Austrian Empire by the identity of sovereigns) through the transfer of Transylvania to the Rumanians and of Croatia and Slavonia to the new Yugo-Slav Kingdom (q.v.) and of Slovakia and Ruthenia to Czecho-Slovakia (q.v.). A part of Western Hungary, known as the *Burgenland*, should have been handed over to Austria, but this has not yet been done (see below). The area of Hungary is about 32,800 sq. miles, with a population (almost entirely Magyar) estimated (1920) at 7,482,000. The political neighbours are Czecho-Slovakia on the N., Yugo-Slavia on the S., Rumania on the E., and Austria on the W.

On the declaration of Republican institutions in 1918, Count Károlyi assumed office as Pro-

visional President, but on March 22, 1919, Count Károlyi resigned, and was succeeded by a "Bolshevik" administration with a "Soviet (Workers' Council), in which Bela Kun (or Cohen) was the dominant personality. This administration was driven out of power by the successes of the Rumanian military forces (which invaded Hungary and occupied Buda Pest) and was followed by a Socialistic Government under Julius Peidel (Aug. 1, 1919). Six days later the Socialistic Government was superseded by an administration appointed by the Archduke Joseph, who accepted office as Provisional President, Aug. 7, 1919, but resigned in consequence of the protests of the League of Nations' delegates in Paris.

On March 21, 1920, Admiral Nicholaus von Horthy of Nagybánya was appointed Governor of Hungary by vote of the National Assembly, which gave him royal rights, with the exception that his approval is not necessary to the verification of laws made by the National Assembly.

In 1921, the ex-king Karl made two efforts to regain the throne, remaining in the country from March 26 to April 5, and from Oct. 21 until removed under escort. On each occasion the Hungarian Government was informed that a Hapsburg restoration would not be tolerated by the European Powers. In August 1921 the Serbians evacuated the Barranza, which they had occupied since the Armistice. Immediately afterwards Hungary should have handed over the *Burgenland* to Austria, but was prevented from so doing by a band of Hungarian irregulars, who prevented the entrance of the Austrian authorities. The Austrians declined to use force, and the questions at issue have been referred to the mediation of Italy.

All religions are tolerated; the greater number of Magyars are Roman Catholics, but there is a large Protestant minority. The parceling out of the great estates, which was forcibly attempted during the Károlyi régime, has been continued to a small extent, but on an economic basis and at the initiative of the owners; a land-reform bill aiming at the forced sale of the properties exceeding a given area has been passed.

A single chamber National Assembly (introduced in Nov., 1918, in place of the Upper and Lower Houses of the former Parliament) is elected by universal suffrage. The question of providing a Second Chamber from a reformed House of Magnates (which ceased to function after the revolution) is under discussion.

The greater part of the area of present Hungary consists of the Alföld or Great Plain, parts of which may be considered as among the most fertile for agricultural purposes in the world, producing grain of excellent quality and supporting a number of horses, cattle and swine. The mountainous districts having been ceded to surrounding states by the Peace Treaty, Hungary has lost the greater part of the forests and mines, which formerly contributed so largely to the national wealth.

Prior to the war Hungary imported merchandise to the value of approximately £85,000,000, and exported approximately £75,000,000 annually; in the year 1926 the imports amounted to about K. 3,220,000,000 and the exports to about K. 2,650,000,000. Taking an average exchange equivalent, based on Zurich quotation for the year 1926, these amounts may be taken as

* The external debt remains the same. No interest has been paid since 1914, and arrears of interest amounted on Dec. 1, 1920, to nearly £22,000,000.

£80,500,000 and £66,250,000 respectively. There is a British-Hungarian Chamber of Commerce at Budapest, and there are openings for trade in chemicals, machinery, hardware, small tools, iron mill products, leather, and textiles. Hungarian (or German) is the language in which business letters should be written.

No part of Hungary touches the sea. The length of navigable rivers is 687 miles; there are about 5,000 miles of railways and 5,800 miles of telegraph in the present Kingdom.

The pre-war revenue of Hungary was about 2,250 million Korona (£93,750,000), whereas the estimated revenue according to the Budget for the year 1921-2 amounts to 20,296,000,000 Korona (£17,000,000). The public debt stood at 6,000,000,000 Korona (£50,000,000), and its present amount may be estimated at about 800,000,000,000 Korona, but this is dependent on exchange conditions and subject to decisions that may be given by the Reparations Commission, which has not yet begun to sit in Budapest.

CAPITAL: Budapest, on the Danube, has a population of 926,000 (1920). The other large towns are: Szeged (110,000), and Debreczen (103,000); there are 34 other towns with a population over 20,000.

The value of the Korona has fluctuated during 1921 between K. 750 and K. 3,000 per £1 sterling; it averaged K. 1,300 for the year 1920-21.

King, Christian X. (*see* Denmark).

Presidents of Al-thing, G. Björnson; Joh. Johannesson; Benedikt Sveinsson.

Iceland is a large, volcanic, and treeless island in the North Atlantic Ocean, extending from 63° 23' to 66° 33' N. lat., and from 13° 22' to 24° 35' W. long., with an estimated area of 40,427 square miles, or greater than that of Ireland. The population was estimated in 1918 at 92,000.

An Act for the creation of a Danish-Icelandic Federal Constitution, Denmark and Iceland to be free and independent States under the same Sovereign, came into force on Dec. 1, 1918, but since the constitution granted in 1913 the assembly (Al-thing) had been more or less independent of the Government at Copenhagen in internal questions. The principal products of the island are sheep, cattle, ponies, and fish, and the imports consist of almost all the necessities of life, the chief items being grain and meal, sugar, coffee, salt, cotton goods, tobacco, spirits, hardware, and timber. Total imports (1918): estimated, £2,400,000; exports, £1,247,000. Iceland is now in direct telegraphic communication with the United Kingdom.

CAPITAL, Reykjavik. Population, about 18,000.

Other towns are Isafjörður, Akureyri, and Seyðisfjörður.

A Kingdom in the South of Europe, consisting of a peninsula, the large islands of Sicily and Sardinia, the island of Elba, and about 70 minor islands (with certain dependencies hereinafter noted). It is bounded on the N. by the Republics of Switzerland, Germany, and Austria, on the S. by the Mediterranean, on the E. by the Adriatic and by the League of Nations territory of *Fiume, Istria, &c., and on the W. by France and the Ligurian and Tyrrhenian Seas. The total area of the kingdom of Italy in 1914 was 110,623 sq. miles, and by the *Treaty of Versailles* (June 28, 1919) Italy gained from Austria-Hungary the Trentino (about 4,000 sq. miles) and Trieste (with about 1,000 sq. miles of the Adriatic Sea-board).

The administration of the northern portion of Albania (the former Turkish vilayet of Scutari) has also been entrusted to Italy, and under the

* See also Yugo-Slavia.

Turkish Treaty of Peace (1900) the Asia Minor Vilayet of *Konia* (40,000 sq. miles, pop. 1,000,000) is placed within the Italian sphere of influence. The total area of the Kingdom was estimated (Jan. 1900) at 120,450 square miles, with a population of about 35,500,000. There is a large settled and floating population of Americans and English, with Anglican churches, and chapels belonging to Methodists, Baptists, and others.

The Italian peninsula is traversed throughout its length by the chain of the Apennines; the Alps form its northern limits, dividing it from France, Switzerland, Germany, Austria and Yugo Slavia. *Mont Blanc* (15,782 feet), the highest peak of the Alps, is in the French Pennine Alps, but within the Italian borders are *Monte Rosa* (15,217 feet) and several peaks from 12,000 to 14,000 feet. The chief rivers are the Po, the Adige, the Tiber, and the Arno.

GOVERNMENT.—Italian unity was accomplished under the House of Savoy, after an heroic struggle from 1848-1870, in which the great patriots *Mazzini* (born 1805, died 1872) and *Gari-aldi* (born 1807, died 1882) were the principal figures. It was completed when the Austrians (under stress of the war with Prussia) evacuated Lombardy in 1866, and through the evacuation of the Papal States by the French in 1870. In 1872 the King of Italy entered Rome, and that city was declared to be the capital. The government is that of a constitutional monarchy with a legislature of two houses—the *Senate* (of 385 life members appointed by the King), and the *Chamber of Deputies* of 520 members (elected by adult manhood suffrage). The maximum duration of Parliament is 5 years; Deputies receive 15,000 lire annually.

PRODUCTION.—Agriculture (including the growing of grapes, olives and chestnuts) is the principal industry. Italian wines are numerous and celebrated, and olives and olive-oil are furnished by Tuscany, Liguria, and the province of Bari; while fruit abounds and is largely exported. The cultivation of the silkworm forms an important industry. Among the principal minerals are iron, lead, zinc, copper, manganese, and antimony ores, sulphur, gypsum, amianthus, alum, and boracic acid. Silver is found in Sardinia, and some gold in the Alps. Salt is a Government monopoly. In 1919 the produce of the vines amounted to 770,460,000 gallons, and that of the olive crop (1919) to 25,115,000 gallons. The principal exports are olive-oil, wine, candied citron, sienna earths, pastes, coral, rags, boracic acid, raw and thrown silk, hemp, cattle, straw hats, rice, iron, zinc and copper ores, sulphur, marble, fruit, vegetables, fresh and prepared meats, poultry chemical products, woods, roots, &c., for dyeing and tanning, artistic works, &c. The imports chiefly consist of cotton, wheat, coal, coke, chemicals, colonial produce, yarns, jute and manufactured goods, woollens, raw silk, silkworms' eggs and cocoons, machinery, iron and steel in bars, plates and rails, hardware, raw hides, horses and cows, fixed oils, salt fish, dye-stuffs, tobacco, earthenware, &c. The manufactures are woollen, cotton, silk, hemp, and linen yarns and tissues, leathers, straw and felt hats, furniture, chemical products, paper, agricultural and other machinery, prepared meats, artistic works (such as mosaics, pottery, Venetian glass, alabaster ornaments), &c. Sugar is extracted from beet in large quantities for home consumption.

DEFENCE.—The Army consists on a peace footing of 310,000 all ranks. On May 23, 1915, Italy declared war on Austro-Hungary, and on Aug. 27, 1916, a state of war was declared to exist with Germany. The cost of the war to Oct. 31, 1918, amounted to 48 milliards of lire (£1,980,000,000). During the War of 1914-1918, over 10 per cent. of the population were mobilized, and 5,250,000 men passed into the Armies of Italy. The killed and missing amounted to 650,000. The Navy includes 5 modern and 6 pre-Dreadnought battleships, 5 armoured cruisers, 30 destroyers, 100 torpedo boats, and 80 submarines. The peace personnel of the Italian Navy is about 40,000 all ranks. Spezia and Pola, the chief naval and military ports of the kingdom, are securely fortified.

EDUCATION.—Primary Education is free and compulsory, and evening continuation classes are also compulsory for military recruits. It is maintained by local taxation and State grants. Secondary education is generally State-maintained, and schools are increasing in number. Several of the Universities are of very ancient foundation.

COMMUNICATIONS.—In 1919 there were 12,800 miles of railway open for traffic; the post-offices numbered 11,314, and there were 35,328 miles of telegraph line. The sea-going commercial marine (1917) consisted of 844 steamers (811,660 tons) and 4,464 sailing vessels (261,769 tons). In 1917, 78,101 Italian and 2,257 foreign vessels (total tonnage 15,882,877) entered and 70,016 Italian and 2,260 foreign vessels (15,895,084 tons) cleared at Italian ports. It is proposed to construct a harbour at Ostia, at the mouth of the Tiber, which will convert Rome into a seaport; improvements in the water connexion to Milan are also being taken in hand.

	1918-19.	1919-20.

ITALIAN COLONIES, &C.

Colony.	Area.	Population.
Libia.....	870,000	1,000,000
Eritrea.....	64,000	380,000
Somaliland.....	193,000	300,000
Tientsin.....	80	10,000
Konia.....	40,000	1,000,000
Total.....	1,307,000	2,690,000

Libia.—The Turkish vilayet of Tripoli and the mutessarifat of Benghazi on the northern coast of Africa, were occupied by Italy in 1911-12, and under the Treaty of Ouchy (Oct. 1912) the sovereignty of the province was transferred to the King of Italy, the spiritual headship over the Muhammadan population being retained by the Sultan. Tripoli is the most easterly of the Barbary States, extending from the frontiers of Tunis to those of Egypt, a distance along the coast-line of nearly 1,100 miles, and inland to the south a distance of about 800 miles. The transferred territory comprises the four sub-provinces or Mutessariflik of Tripoli, Khoms, Jabel-el-Gharb, and Fezzan, and also of Benghazi or Cyrenaica, a total area of 870,000 square miles, with a population of about 1,000,000. There are no rivers in the country, and, the rainfall being precarious, a good harvest can only be reckoned on every four or five years. Barley, dates, olives, oranges, lemons, and vegetables are produced, and the principal imports are metals, British and other European manufactures, tea, beads, wine and spirits, besides a number of articles for barter in Wadai, Bornu, and the Western Sudan, whither caravans proceed from Tripoli. The principal articles of exports are ostrich feathers, ivory, skins, sponges, hides, esparto grass, wool, cattle, and horses. The ancient ruins in Cyrenaica, i.e. at Cyrene, Ptolemais, and Apollonia, are interesting to explorers, as well as those at Leptis Magna, which is close to Khoms, or 70 miles from the city of Tripoli. The population of Benghazi consists of Arabs, Greeks, Maltese, and a few Levantines. The commerce in cereals, wool, cattle for Malta, and other agricultural produce, is considerable, when a sufficient rainfall causes good harvests. The capital of "Tripolitana" is Tripoli (population 50,000), and of Cyrenaica, Benghazi (population 35,000).

Governor of Cyrenaica, Senator G. de Martino.

Governor of Tripolitana, L. Mercatelli.

Eritrea is a Red Sea colony, and extends from Ras Kasar, 16° 2' N., to Ras Denna, 12° 42' N., and is bounded on N.W. by the Anglo-Egyptian Sudan, on S. by Abyssinia, and on E.E. by French Somaliland. It consists of a triangular portion of barren and sandy lowland with a coast-line along the Red Sea of about 700 miles, and covers a total area of 64,000 square miles, with a population of

about 382,000, of whom about 3,000 are Europeans. The capital is Asmara, Massawa being the chief port, where there is a good harbour. The principal products are potash, skins, and salt, of great value as being the monetary currency of Southern Abyssinia.

Governor of Eritrea, Admiral G. Cerrina.

Somaliland.—Italian Somaliland comprises a coastal strip on the Gulf of Aden and the Indian Ocean, from 12° N. lat. to the Equator, and is bounded on the N. by the Gulf of Aden, on E. by the Indian Ocean, and on W. by British Somaliland, Abyssinia, and British E. Africa. French and British Somaliland lie between Eritrea and Italian Somaliland. The total area is about 233,000 sq. miles, and the population is estimated at 300,000. Agriculture and camel and cattle rearing are the principal industries. The capital is Mogadisho, on the Indian Ocean.

Governor, C. Riveri.

Tientsin.—Italy obtained in 1902 a concession of land fronting the Peiho river (China), with a total area of 20 square miles and a population of about 10,000 natives.

Konia.—Under the *Treaty of Sévres* Italy received from Turkey the right to occupy the Asia Minor district of Konia (40,000 square miles) of which, however, the suzerainty remains vested in the Sultan.

JAPAN.

Emperor, Yoshihito, *K.G.*; born Aug. 31, 1879; succeeded July 30, 1912; accession ceremony, Nov. 10, 1915; mar. Princess Sadako, May 10, 1900, and has issue 4 sons.
Heir Apparent, Prince Hirohito, *G.C.B.*, *G.C.V.O.*; born April 29, 1901.

CABINET (Sept. 16, 1919).

Prime Minister and Minister of Finance, Viscount Korekiyo Takahashi.

Minister of Foreign Affairs, Count Yasuya Uchida.

Minister of Justice, Count Enkichi Ōki.

Financial Attache, Kengo Mori.

Consul-General (London), Kihei Ota, 1 Broad Street Place, E.C. 2.

Consul (Liverpool), K. Kishi.

" (Glasgow), A. S. Younger.

Consul (Manchester),

(Middlebrough), Wayman Dixon.

This ancient and extensive Empire consists of four large and many small islands, said to comprise in all about 4,223, the principal of which are Honshu, Shikoku, Kiu-shū, Hokkaidō or Yezo, situate to the north of the main island, from which it is separated by the Tsugaru Straits, and Formosa, called by the Japanese, Taiwan. The Ainu, an uncivilised but harmless tribe, who in ancient times occupied the greater part of the country, are still found in Yezo. The Kurile Islands have belonged to Japan since 1875, and in 1876 she incorporated the Luchu (Riu-kiu) Islands under the name of "Prefecture of Okinawa." The empire, with its dependencies, comprises an area of 235,886 square miles, with a population (Dec. 1918) of 79,635,126. The islands are eminently volcanic, and 18 of the summits are still active; the chief of these, Fuji-san, or Fujiyama, the loftiest and most sacred mountain of Japan, about sixty miles from Tokio, is 12,370 ft. high, and has been dormant since 1707. Japan is also liable to frequent, and occasionally disastrous, earthquakes. The country is very mountainous, and not more than one-sixth of its area is available for cultivation. It possesses numerous fine harbours. The soil is productive, teeming with every variety of agricultural produce. Copper, iron, sulphur, lead, manganese, tin, tungsten, molybdenum, antimony, zinc, agate, corneal, and rock crystal are found. Gold is found in the island of Sado, and silver mining is prosecuted on a small scale; while there is a good supply of middling coal. Petroleum is also being produced in quantities, especially in the Province of Echigo. Among the vegetable productions may be noted the camphor-tree, paper mulberry, vegetable wax-tree, and a lacquer-tree, which furnishes the celebrated "lacquer" of Japan. The principal timber trees are the *Cryptomeria japonica*, *Pinus Massoniana*, and *Zeikowa Keaki*; the *Paulownia Imperialis* is largely used for fancy boxes and works of art; the maple is merely for ornament. Chestnut, oak, beech, and elm are comparatively rare and little used. The tobacco-plant, tea-shrub, potato, rice, wheat and other cereals are all cultivated; rice is the staple food of the people, about 300,000,000 bushels being consumed annually (in 1920 the home grown crop exceeded all previous records and amounted to 450,000,000 bushels). Agriculture, upon which the Japanese bestow great care, is their chief occupation. The coasts are extremely rich in fish. The floral kingdom is rich, beautiful, and varied, though scented flowers are comparatively few. Fruit, for the most part of inferior quality, is abundant; English fruits, such as apples, strawberries, pears, grapes, figs, and peaches are being produced.

Commerce and Industry.—The chief manufactures are silk and cotton, cotton yarn, matches, paper, glass, lacquer ware, porcelain, and bronze, and shipbuilding is an important industry in the yards; the cotton-spinning factories increased from 122 in 1913 to 229 in 1920. The chief imports are raw cotton from India, U.S., Egypt, and China; flour from the U.S.; and piece goods, metals, manures, woollens, wool, drugs, rails, locomotives, and machinery from the U.S.A. and Europe. Sugar is largely imported from the Dutch East Indies, Philippine Islands and Formosa; indigo from Germany, British India and Dutch East

Indies; kerosene oil from U.S. and the Dutch Indies; beans, peas, and pulse from China and Korea; and rice, principally from British India, French India, Korea, Siam, and China. The chief exports are silk, cotton yarns, rice, tea, fish, copper, matches, coal, camphor, straw plaits, porcelain, earthenware, lacquer ware, and marine products.

Communications.—There were 8,106 miles of railroad open in Dec., 1920, in addition to 1,313 miles open in Korea and 1,221 miles in Formosa, while the South Manchurian Railway (China) is under Japanese control. The mercantile marine consisted in 1920 of 3,077 steamers above 20 tons (792 of them over 1,000 tons), and 3,190 sailing vessels over 100 tons. The total tonnage entered and cleared at open ports in 1919 was 89,201,972 (66,676 vessels). The three great ports are Kobe, Yokohama and Osaka, the first named having a large transhipment trade, in addition to direct imports and exports. In 1919 there were 7,877 post offices dealing with 3,390,850,232 postal packets, and 25,711 miles of telegraph line carrying 75,156,716 messages outwards, and 76,597,583 inwards.

Defence.—Service in the Army is universal and compulsory between the ages of 20 and 40. The peace effective is 272,731 of all ranks. The war strength is: First line, field army, about 479,022; second line, fully trained, about 1,023,190. The Navy includes 15 battleships, 7 battle cruisers, 27 cruisers, 15 coastal defence ships, 8 gunboats, 85 destroyers, 20 torpedo boats and 20 submarines (Sept. 1921). Japan declared war against Germany on Aug. 23, 1914, and her fleet was active throughout the war, while her troops are assisting to restore order in Siberia.

Education is in the lower grades free and compulsory. High schools are State-aided, and prepare for a 3 years' course at the Universities, which is largely devoted to the study of European languages. There are high schools for girls, and the technical and special schools are well attended. There are five State Universities of Tokio, Kyoto, Tohoku (at Sendai), Hokkaido and Kiushu (at Fukuoka).

Formosa.—The island of Formosa (Taiwan) was ceded by China to Japan (June 2, 1895) in accordance with the Treaty of Peace. Its total area is 12,500 square miles, with 3,669,667 inhabitants (1920). Imports, Yen 64,133,000; exports, Yen 35,622,000, in 1919. The colony has

*The local exchange value of the yen is taken at 24.24 for the purposes of conversion, but in July, 1921, its value was 22.82.

been self-supporting since 1906. Estimated revenue and expenditure (1919-20), Yen 70,305,000.

CAPITAL, Taihoku. Population (1917), 102,933.

Saghalin (Karafuto).—The southern half of this island was ceded by Russia at the close of the Russo-Japanese war. The ceded territory has a total area of 9,824 sq. miles with a population (1918) of 76,795. The Japanese Government is encouraging the settlement of agriculturists, and there is a large fishing industry. Estimated revenue and expenditure (1920-21) Yen 5,007,000.

The **Kwantung Peninsula** (capital, Dairen, formerly Dalny), which had been leased to Russia by China, was similarly leased to Japan after the Russo-Japanese war. Area, 1,220 sq. miles; population, 572,25. Dairen provides Japan with a mainland port, ice free all the year round, and the peninsula is fertile. Imports (1917), Yen 148,928,309; exports, Yen 149,413,033. Estimated revenue, Yen 11,099,000, and expenditure, Yen 7,984,000 (1920-21).

CAPITAL, Dairen. Population (1918), 168,284.

The **Pescadores (Hokoku)** consists of about 14 islands, with a total area of 85 square miles, and a population of (1917) of 56,932.

Korea (Cho-sen).—By a treaty of Aug. 23, 1910, Korea was annexed to Japan and became part of the Japanese Empire.

Korea is situated between 122° and 128° E. long., and between 34° and 43° N. lat., and the coast is fringed with innumerable islands, of which the largest is Quelpart. Total length, 600 miles from north to south, and greatest breadth 135 miles from east to west, with an area of some 71,000 square miles. Population estimated at 16,668,997 (Dec. 1917); there are about 333,000 (Dec. 1917) Japanese in the country. The soil is fertile, but mountainous except in the river valleys. About 2,790,580 acres are under cultivation, the staple agricultural products being rice and other cereals, beans, cotton, tobacco, and hemp; the other natural products are chiefly gold and hides. Ginseng, a medicinal root much affected by the Chinese, is largely grown under Government supervision in the province of Pyeng-An, and, being a Government monopoly, forms a rich source of revenue. Gold, copper, coal, iron, and other minerals are distributed throughout the country. The principal exports are beans, rice, livestock, cowhides, ginseng, wheat, barley, iron ores, and raw cotton. Manufactures are as yet in a primitive condition, the principal being hemp cloth, brass ware, and an excellent quality of paper resembling the Japanese article, but stouter. About 73 per cent. of the sea-borne trade is carried in Japanese bottoms. Considerable progress is being made in the direction of the proper lighting of the coast. The total railway mileage open to traffic is 1,313 miles. Estimated revenue and expenditure (1919-20), Yen 77,513,000.

Imports into Korea, 1919 Yen 129,250,000
Exports from Korea, 1919 " 125,620,000

Pacific Islands.—Under the Treaty of Versailles, 1919, Germany renounced the sovereignty of all her over-sea possessions, and the German Pacific Islands N. of the Equator have been allocated to Japan. These islands, in Micronesia, are the Pelew, Caroline, Marshall and Ladrone groups, with a total area of about 800 sq. miles, and a population estimated at 60,000 natives and 5,000 Japanese.

Shantung.—The German possessions in the Shantung Peninsula of China (Kiao-Chao, &c.),

were allocated to Japan, and their restoration to China is under consideration.

CAPITAL OF THE JAPANESE EMPIRE, TOKIO, formerly called *Yedo*, the residence of the Emperor; population (Dec., 1918), 2,347,442. Other cities are—*Osaka*, 1,642,580; *Kioto*, the ancient capital, 679,287; *Nagoya*, 436,909; *Kobe*, 592,726; *Yokohama*, 447,423; *Hiroshima*, 182,391; *Nagasaki*, 198,147; *Kanazawa*, 158,637; *Kure*, 124,687.

FLAG: White, charged with rising sun (red).

KHIVA.

Khan, H. H. Said Asfendiari, b. 1871, succeeded 1920

Khiva lies between Bokhara and Russian Trans-Caspia, and has a total area of about 26,000 square miles, with a population of 800,000, of whom about half are nomads. The country occupies the fertile delta of the Oxus, and is highly productive. The capital (Khiva) has about 10,000 inhabitants.

KURDISTAN.

Kurdistan is a mountainous district of Eastern Asia Minor, between Armenia (N.), Syria and Mesopotamia (S.), Persia (E.), and Turkish Anatolia (W.). The Kurds are a semi-nomadic tribe inhabiting the mountainous regions of Turkish Asia Minor and of N.W. Persia. They are believed to be the Karduchi of Xenophon's *Anabasis*, and for centuries they lived in

quasi-independence, punctuated by raids and subsequent punitive expeditions. In 1920 the autonomy of Kurdistan was recognised by Turkey and Persia, and by the Supreme Council of the Allied Powers.

The area of the country is estimated at 65,000 to 70,000 square miles, with a population of 2 to 3 millions. The chief centres are Diarbekir, Bitlis, Van (to the east of Lake Van) in the former Turkish dominions, and Urmia (to the west of Lake Urmia) and Kermanshah, in the Persian dominions. *Lake Van* (2,000 sq. miles in extent) occupies the central portion of the former Vilayet of Van; *Lake Urmia* (1,600 sq. miles in extent), across the Persian border, is about 4,000 feet above sea level, and its waters are so salt that fish cannot live therein.

The climate is severe, with a short hot summer and long and severe winter; but cereals, vines and fruit are abundantly cultivated on the slopes of the mountains; rice is grown in the hot, well-watered plains, while the rich pasture-lands of the slopes and valleys support large herds of horses, mules and sheep. The mineral wealth of the country is almost entirely undeveloped, but it is believed to be very great, and there are numerous hot and cold mineral springs; salt is obtained in large quantities in the neighbourhood of Lake Van.

The Kurds are Muhammadans and fierce persecutors of the Christians in their districts and in the neighbouring territory of Armenia.

LATVIA.

President, Jahnis Tschakste.
Premier and Foreign Affairs, Z. A. Meterovics.

Minister in London, G. W. Bisseneek, 24 Gledhow Gardens, South Kensington, S.W. 5.
Sec. of Legation, J. Gilbert.
Consul-General, E. Bihrinach.

A Baltic Republic in the basin of the Dvina river and round the Gulf of Riga, includes the former Russian Provincial government of Courland, and parts of Livonia and Latgale, the area being about 28,000 sq. miles, with a population of about 1,750,000.

The surface of the country is generally flat with marshy areas, interspersed with over 1,000 lakes, of which the largest is Lake Peipus. Agriculture and dairy farming are the principal occupations of the people, and there are many flourishing industries; while the fisheries are also of importance.

The seat of government is Riga, at the mouth of the Dvina river, with an estimated population of 570,000, other centres being Libau (100,000) and Windau (50,000) on the Baltic coast, and Mitau (50,000) and Dwinsk (90,000) near the Southern (Lithuanian) frontier.

The legislature consists of a single Chamber Assembly of 150 members, elected by universal adult suffrage, and the President of the Assembly is President of the Republic. The executive is entrusted to a Council of Ministers.

CAPITAL, Riga.

FLAG: Red, white, red, with sun's rays above the letter "L" and three stars.

BRITISH LEGATION.

British Minister, Ernest Colville Collins

Wilton, C.M.G. (1921) £

Secretary of Legation, R. Sullivan.

Chief of Military Mission, Maj. R. B. Goodden, O.B.E.

LIBERIA.

President (1920-1924), C. D. B. King, assumed office Jan. 1, 1920.
Vice-President, S. A. Ross.
Secretary of State, E. J. Barclay.
Treasury, J. Harris.
Attorney-General, E. M. Cummings.
Postmaster-General, T. G. Fuller.
War & Interior, E. J. Barclay (ad int.).
Education, W. F. Walker.
Receiver of Customs and Financial Adviser (lent by Govt. of U.S.A.), H. F. Worley.

Envoy Extraordinary and Minister Plenipotentiary in London, J. P. Crommelin, 13 Eaton Place, S.W. 1.

Sec. of Legation, C. W. Dresselhuys.
Consul-General, C. E. Cooper, 46 Castle Street, Liverpool.
Consul, J. T. Grein, 27 Mincing Lane, E.C. 3.
Vice-Consul, A. E. Donaldson.

An independent Negro Republic of Western Africa, occupying that part of the coast of North Guinea which is between the rivers Cavalla, S.E., and Mano, N.W., a distance of about 350 miles, with an area of about 48,000 square miles, and extending to the interior to latitude 8° 50', a distance of 150 miles from the seaboard. It was founded by the American Colonization Society in 1820, and has been recognised since 1847 as an independent State. The population is estimated at 1,500,000 to 2,000,000, including about 12,000 Americo-Liberians. The principal exports are palm-kernels, piassava, palm-oil, coffee, cocoa, ivory and kola nuts. The chief imports are rice, tobacco, Manchester goods, provisions, spi ice, salt, hardware, glass and earthenware and building materials. The executive power is vested in a President elected for four years, assisted by a ministry; there are two houses of Legislature, the Senate, with eight members elected for six years, and the House of Representatives with fifteen members elected for four years. There is no regular army, but there is an enlisted frontier force of about 600 men under native officers. The control of the customs is in the hands of a General Receiver (who is also Financial Adviser) lent by the Government of the U.S.A. There are 10 ports of entry along the 350 miles of coast and 12 interior ports. In 1920, 446 vessels (525,314 net tons) entered and cleared at Monrovia.

LIECHTENSTEIN.

Prince, Johann II., b. Oct. 5, 1840; suc. Nov. 12, 1898.
 A Principality on the Upper Rhine, between the Austrian province of Vorarlberg and Switzerland; area 59.61 square miles, pop. (1911) 10,716. The main industries are agriculture (chief products being corn, wine and turf), textiles and embroidery. Revenue (1919), 6,883,441 kronen; expenditure 5,271,170 kronen (24 kronen = £1); debt 594,465 francs. CAPITAL, Vaduz. Pop. 1,376.

LITHUANIA.

President, A. Stulginskis (May 15, 1920).
Premier, Dr. K. Grinius.
Foreign Affairs, Dr. J. Puryckis.

Minister in London, Thomas Naroushevitch.

The former Russian Governments of Kovno and Vilna and portions of Grodno, Mogilev and Vitelsk were united in 1918 as the Republic of Lithuania (Lietuva). The Republic is bounded on the N. by Latvia, on the S. by the German district of Königsberg, Poland and Soviet Russia, on the E. by Soviet Russia, and on the W. by the Baltic Sea, the total area included in the Republic being about 40,000 sq. miles, with an estimated population of 5,000,000. The future of the districts of Memel and Tilsit is to be settled by the League of Nations, as between Lithuania and its S. neighbour, Poland.

The legislature consists of a single chamber Assembly of 112 members, elected by universal adult suffrage, the Executive being entrusted to a council of ministers. The seat of government is Vilna, on the Villya river, a tributary of the Niemen (pop. 210,000) connected by railway with Riga (Latvia), Petrograd, and Warsaw (Poland); Kovno, on the Niemen, has a population of 95,000, other centres being Grodno (60,000), Memel, on the Baltic (35,000), Suvalki (30,000), and Shavil (30,000).

CAPITAL, Vilna.

BRITISH LEGATION.

British Minister (vacant).
Vilna—British Chargé d'Affaires, Lt.-Col. R. B. Ward.

LUXEMBURG.

Grand Duchess, H.R.H. Charlotte, born Jan. 23, 1866, succeeded (on the abdication of her sister) Jan. 9, 1919; married, Nov. 6, 1919, Prince Felix of Bourbon-Parma. Heir Apparent, Prince Jean, born Jan. 6, 1921.

Minister of State, M. Reuter.
Chargé d'Affaires, M. A. B. Pescatore.
Consul-General in London, M. H. S. J. Maas,
28 Langham Street, W. 1.

A Grand Duchy in Central Europe, bounded by Germany, Belgium, and France; it formed part of the Germanic Confederation; 1815-66, and was included in the German "Zollverein." In 1867 the Treaty of London declared it a neutral territory under the sovereignty of the King of the Netherlands, on whose decease, 23 Nov., 1890, it passed to the Duke of Nassau. The territory was invaded and overrun by the Germans at the commencement of the war in 1914, but was liberated in 1918, U.S. troops entering the capital on Nov. 22. By the Treaty of Versailles, 1919, the country is declared to be free from all ties with Germany. The area is 999 square miles:

the population (1906) 563,824, nearly all Roman Catholics. The principal city is rich in iron-ore. The revenue in 1901 was estimated at 63,808,926 francs, expenditure 149,773,345 francs; debt (1 Jan., 1902) 128,000,000 francs. There are 328 miles of railway. The army numbers about 300 men. The capital, Luxemburg (population 45,676), is a dismantled fortress.

FLAG: Red, white, blue.

British Envoy, Sir Ronald Graham, K.C.M.G., C.B. (The Hague).

Consul, N. le Gallais.

MEXICO, Federal Republic of.

President, Alvaro Obregon, assumed office Dec. 1, 1920.

CABINET (Dec. 1, 1920).

Minister of the Interior, Gen. P. E. Calles.

Foreign Affairs, Señor Alberto J. Pani.

Finance, Señor A. de la Huerta.

Industry and Commerce, Señor R. Zubaran Capmany.

Agriculture, Señor A. I. Villareal.

War, Señor E. Estrada.

1st Sec. (in charge of Legation), Señor Don Juan F. Urquidí, 25, Craven Road, W. 2.

Consul in London, Señor Don G. Fernandez, 25, Craven Road, W. 2.

Liverpool—Cons.-Gen., Señor Don A. Mascarenas, 51 South John Street.

Mexico occupies the southern part of the continent of North America, with an extensive seaboard to both the Atlantic and Pacific Oceans, extending from 15° to 32° 30' N. lat. and 87° to 117° W. long., and comprising one of the richest and most varied zones in the world. It comprises 27 states, 3 territories, and the federal district of Mexico, making in all 31 political divisions, comprehending an area of 768,883 square miles, with a population of (1910) 15,063,207.

The two great ranges of North America, the Sierra Nevada and Rocky Mountains, are prolonged from the north to a convergence towards the narrowing Isthmus of Tehuantepec, their course being parallel with the west and east coasts. The surface of the interior consists of an elevated plateau between the two ranges, with steep slopes both to the Pacific and Atlantic (Gulf of Mexico). In the west is the Peninsula of California, with a mountainous surface, separated from the mainland by the Gulf of California. The Sierra Nevada, known in Mexico as the *Sierra Madre*, terminates in a transverse series of volcanic peaks, from Colima on the west to Citlaltepete on the east, the intermediate and highest peaks being Ixtaccihuatl (17,879 feet) and Popocatepetl (19,784 feet). The low-lying lands of the coasts form the *Tierra Caliente*, or tropical regions (below 3,000 feet), the higher levels form the *Tierra Templada*, or temperate region (from 3,000 to 5,000 feet), and the summit of the plateau with its peaks is known as *Tierra Fria*, or cold region (above 5,000 feet). The only considerable rivers are the *Rio Grande del Norte*, which forms part of the northern boundary, and is navigable for about 70 miles from its mouth in the Gulf of Mexico, and the *Rio Grande de Santiago*, which runs from Lake Chapala to the Pacific. The remaining streams are governed by the formation of the land, and run in mountain torrents between deep-cut cañons or "barrancas." The largest fresh-water lakes are

Chapala, some 50 miles in length, and *Patzcuaro* and *Xochimilco*. In the north-west are saline lakes amid bare and dry regions. The climate varies according to the altitude. Yellow fever sometimes occurs at Merida, Yucatan.

The earliest invaders, or *Toltecs*, gave place in the 13th century to the *Aztecs*, who were conquered in the 16th century by Spanish adventurers under *Hernan Cortes*. Spanish rule was established at *Tenochtitlan*, a 14th century Aztec city (now Mexico), and Mexico remained a Spanish dominion until its freedom was asserted by a revolutionary war, 1810-1827. From 1837-1848 the province of Texas gave rise to hostilities with the United States, terminating in a three years' war and a cession of the disputed territory to the victorious northern States. In 1820 a Republic was proclaimed, but Iturbide declared himself Emperor in 1821. He was shot in 1824, and a Republic was again established. In 1862 the French troops came to Mexico, and in 1864 an Empire under Ferdinand Maximilian of Austria was declared. In 1867 the downfall of the Empire and the death of the Emperor gave rise to the new Republic, which has endured to the present day. The most prominent of modern Presidents is *Porfirio Diaz*, who ruled (except during 1880-4) from 1876 to May 25, 1911. Since 1911 there have been many internal disturbances and considerable friction (amounting almost to a state of war) with the United States. On July 15, 1914, Venustiano Carranza assumed control of the executive, but he was overthrown by a further revolution in 1920, and is believed to have been shot by the insurgents.

Acapulco, Manzanillo, Mazatlan, Salina Cruz, and Guaymas are the chief ports on the Pacific; and Vera Cruz, Tampico, Progreso, and Puerto Mexico on the Atlantic or Gulf of Mexico. There were 15,804 miles of railroad open on Sept. 16, 1912, and 40,687 miles of telegraph. The railroads have in a large measure been built by American and English companies.

The principal agricultural crops are maize, wheat, barley, Chile-pepper, sugar, coffee, cotton, tobacco, vanilla, flax, grapes, and all kinds of tropical fruit. The maguery, or Mexican aloe, yields a favourite beverage, "pulque"; other species of the same plant supply pita-flax and sisal-hemp (henequen). The forests abound in mahogany, rosewood, ebony, and caoutchouc trees. The mineral wealth is very great; silver and gold, copper, lead, and quicksilver, iron and coal, are the leading products of the mines. Woollen and cotton spinning and weaving, and other branches of industry, are encouraged by high protective duties. The imports, nevertheless, consist very largely of textile manufactures. Of the exports 45 per cent. consist of silver and gold; sisal hemp (henequen), coffee, hides and skins, timber, logwood, vanilla, tobacco, dyestuffs, sugar, and drugs ranking next in importance.

During 1918 legislation of a confiscatory nature regarding the Mexican oilfields caused a diplomatic rupture with the U.S. and Great Britain.

The monetary system has recently been placed on a gold basis. Outstanding debt, May, 1921, pesos 427,053,683 = U.S. \$213,526,814; interest due May, 1921, pesos 130,778,021 = U.S. \$65,389,010.

The language of the country is Spanish.

* The remains of *Hernan Cortes* have been definitely located in the Temple of Jesus, Mexico City. They are contained in a marble vault, with the funeral garments.

MOROCCO.

French and Spanish Protectorate.

Sultan, Mulai Yusef, G.C.M.G., proclaimed Aug. 18, 1912.

Morocco, the largest of the Barbary States, is situate in the north-west of the African Continent, between 27°-36° N. lat. and 1°-12° 40' W. long, with a total area estimated at 314,000 square miles, and a population of about 7,000,000. Morocco is traversed from the Atlantic coast, in the south-west to the Algerian frontier in the north-east by five parallel ranges, known generally as the Atlas Mountains. Between the various ranges lie well-watered and fertile plains, the lower slopes of the northern flanks of the mountains being well-wooded, while the southern slopes are exposed to the dry winds of the desert and are generally arid and desolate. The most northerly point of Morocco is the peninsular of Ceuta, which is separated from the Continent of Europe by the narrow strait of Gibraltar. The Jebel Musa dominates the promontory, and with the rocky eminence of Gibraltar was known to the ancients as *The Pillars of Hercules*, the western gateway of the Mediterranean. Between 32° N. and 36° N. is the headland Ghir, which encloses a bay containing the port of Agadir formerly known as the "Gate of the Sudan." This port formed the bone of contention between France and Germany in 1911-1912.

The climate is generally good and undoubtedly healthy, especially on the Atlantic coast, the country being sheltered by the Atlas Mountains from the hot winds of the Sahara. The extremes of temperature in Tangier and Mogador are 90° Fahrenheit in the summer and 37° in the winter, with a rainy season from October to May. The Mediterranean coast is drier and less

temperate, but not unhealthy, while the plains of the interior are intensely hot.

Government.—From the end of the 8th century A.D. until the year 1212 Morocco was ruled by a despotic Amir or Sultan of various dynasties, that of Filali having reigned since 1249. The imperial umbrella (the symbol of sovereignty) was passed on by nomination, and the rule was arbitrary and unchecked by any civil limits. The country was subject to European intervention at many periods, and during the closing years of the nineteenth century the dominant power in the country was France, whose Algerian territory formed the eastern boundary. By the Anglo-French Convention of 1904 Great Britain had recognised the predominance of French rights, but in 1905 Germany exhibited an interest in Moroccan affairs, and at the *Algeiras Conference* in January, 1906, an attempt was made by the Powers to define the various interests, and to establish order in the country by means of an organised police force. Between 1906 and 1911 there were frequent conflicts between French troops and Moroccan tribesmen, and in 1908 internal dissensions led to the defeat and deposition of the Sultan Abd el Aziz IV. by his brother Hafid, who eventually triumphed and was recognised by the Powers in 1909. In 1912 Sultan Hafid abdicated and accepted a pension from France, and was succeeded by his brother Moulay Yusef.

France is the paramount power in Morocco, and the Government of the greater part of the country is administered by the French Republic, which is recognised as the "protecting power." In addition to France, the kingdom of Spain has had relations with Morocco for many centuries. *Ceuta*, in 35° 54' N. lat. and 5° 18' W. long., has been a Spanish possession since the close of the sixteenth century, and forms part of the administrative province of Cadiz, and there are several *presidios* along the Mediterranean (or Rif) coast, while the adjacent *Alhucema* and *Zaffarin* islands are Spanish possessions. A special international régime was designed for *Tangier* before the War by negotiations between the British, French and Spanish Governments, but the outbreak of the War prevented this régime from being put into operation. Pending further negotiations the town and zone are administered by the Sultan's representative and the diplomatic body. In the Spanish zone there have been tribal risings in 1921, and during the operations to quell these risings the Spanish Expeditionary force met with serious reverses in the neighbourhood of Melilla.

Among the agricultural products are wheat, barley, maize, beans, peas, birdsseed, linseed, coriander, cummin, fennugreek, esparto, and hemp, and the northern slopes of the Atlas produce many fruits, principally figs, almonds, pomegranates, lemons, olives, oranges and dates, the latter growing also on the southern slopes and in the plains. The live stock includes large quantities of horses, cattle, sheep and goats, while the poultry and egg industry is of increasing importance. Antimony, iron, coal, copper, lead and tin (the last three in considerable quantities) are known to exist, and gold and silver are also found. Rock salt and brine are exported in large quantities. The trade of Morocco is chiefly with France and Algeria, Great Britain and Spain, the chief imports being cottons, sugar and soft goods, the exports

being grain, eggs, hides and skins, and wool. The unit of currency in the French protectorate is the franc, while in the *Tangier* zones the franc, the Spanish and the *Hasani peseta* are all current, and in the Spanish zone the two last of these currencies.

Communications.—The French have built some narrow gauge military railways from Casablanca to Rabat, to Kinitra and Mequinez, and to Settet, while the Franco-Spanish treaty provides for a line from *Tangier* to Fez. Telegraphic communication is established by submarine cables from *Tangier* to Cadiz, Tarifa and Oran, and there are wireless stations at *Tangier*, Rabat, Casablanca, and Mogador; inland lines have been built by the French to Fez and to some of the ports, as well as to the borders of the Spanish zone, and the latter line will shortly be extended to *Tangier*. Roads have also been constructed in the French zone, and it is now possible to go to Fez or Marrakesh by motor-car.

The principal Harbours are Tetuan, *Tangier*, El Araish, Rabat, Casablanca, Mazagan, Saffi, Mehedla, and Mogador.

Tangier is distant from London about 1,500 miles; transit 5 days, or by *Sud Express*, 3 days.

NEPAL. (See page 632).

NETHERLANDS (or HOLLAND), Kingdom of.

Queen, *Wilhelmina Helena Paulina Maria*, born August 31, 1880, succeeded her late father, King William III., Nov. 23, 1890; mar., Feb. 7,

1901, H.R.H. Prince Henry, Prince of the Netherlands and Duke of Mecklenburg.

Heiress Apparent, Princess Juliana of Orange-Nassau, Duchess of Mecklenburg, born April 30, 1909.

Queen-Mother, Emma, Princess of Waldeck and Pyrmont, born August 2, 1858; married the

late King, Jan. 7, 1879, who died November 23, 1890; acted as Regent 1890-1898.

MINISTRY (Sept. 7, 1918).

Minister of Interior, Jonkheer Dr. Ch. J. M. Ruys de Beerenbrouck.

Foreign Affairs, Jonkheer Dr. H. A. van Karnebeek.

Colonies, M. S. de Graaff.

Justice, Dr. Heemskerck.

War (and Marine, ad int.), M. J. J. C. van Dyk.

Ways and Communications, M. Koenig.

Agriculture, Industry and Commerce, M. van Ysselsteyn.

Finance, Dr. D. J. de Geer.

Education, Dr. de Visser.

Labour, Prof. Aalberse.

Minister in London, Jonkheer Dr. R. de Marees van Swinderen, 32 Green Street, Park Lane, W. 1.

Chancery, 42 Seymour Street, W. 1.

1st Sec., E. C. T. Roosmale-Nepveu.

Attaché, A. Loudon.

Director of the Chancery, H. N. Brouwer, 3 Atney Road, Putney, S. W. 15.

Naval Attaché, Capt. K. F. Sluys.

Commercial Attaché, F. B. S'Jacob.

Horticultural Adviser, B. Gerritzen.

Consul-Gen., H. S. J. Maas, 28 Laugham Street, W. 1.

A maritime Kingdom of Central Europe, situate on the North Sea, in lat. $50^{\circ} 46' - 53^{\circ} 34'$ N. and long. $3^{\circ} 22' - 14^{\circ}$ E., consisting of 11 provinces, and containing a total area of 12,761 square miles, with a population in March, 1920, of 6,843,436. The majority, about three-fifths, belong to the several Reformed Churches; and the remainder are Roman Catholics, with about 107,000 Jews. The land is generally flat and low, intersected by numerous canals and connecting rivers—in fact, a network of water courses. The principal rivers are the Rhine, Maas, and Yssel, with the mouths of the Schelde. The chief native products are herrings and other fish, cattle, horses, swine, sheep, poultry, eggs, seeds, potatoes, oats, rye, wheat, barley, beans, peas, buckwheat, beetroot, chicory, flax, hemp, tobacco, and dairy produce. The principal manufactures are shipping, bricks, margarine, cocoa, chocolate, linen, rich damasks, cottons, woollens, cigars and other manufactured tobacco, candles, confectionery, earthenware and pottery, glass bottles and ware, chemical and pharmaceutical products, matches, perfumery, sugar, bicycles and automobiles, boots and shoes, starch, potato flour, engines, metal substances, works of art in gold and silver, incandescent lamps, machinery, motors, paper, printing, oils, beer, "geneva" and other liqueurs. Diamond-cutting employs numerous hands in Amsterdam.

Communications.—The total extent of canals is about 2,000 miles. There were 2,117 miles of railroad open in 1918, and 5,249 miles of telegraph line. The mercantile marine, on Dec. 31, 1919, consisted of 427 steamers, tonnage 3,583,256 (cubic metres) and 120 sailing vessels of 52,378 tons (cubic metres). In 1920, 27,764,936 tons (cubic metres) entered, and 19,646,956 tons (cubic metres) cleared at the various ports. An Act for the damming and draining of the Zuyder Zee was passed in 1918.

Defence.—The Home Forces consist of a conscript army, with an annual levy of 23,000 men, producing a first-line army of 170,000, or (including landwehr and landsturm) 570,000 all

ranks. The Royal Navy consisted, on July 1, 1921, of 100 ships (7 of them ironclads, and 6 protected cruisers).

Education.—Private State-aided primary instruction is encouraged rather than public, though the latter is provided if required, by local taxation. The average attendance at primary schools is 95 per cent. Secondary schools for working classes are numerous, well equipped and attended. The principal Universities are at Amsterdam, Groningen, Leiden, Utrecht, and Delft, and there are technical universities at Rotterdam (commercial), Wageningen (agriculture), and Utrecht (veterinary).

NETHERLANDS COLONIES.

TOTAL AREA, 822,473 square miles.

POPULATION, 47,203,639.

The possessions of the Kingdom of the Netherlands in the EAST INDIES (Administrative Capital *Batavia*, pop. about 140,000) are very considerable, comprising the whole of the SUNDA ISLANDS and *MOLUCCAS: Sumatra* (area, 162,000 sq. miles), *Java* and *Madura* (51,000 sq. miles), *Netherlands Borneo* (215,000 sq. miles), *Celebes Island* (72,000 sq. miles), *Moluccas* (44,000 sq. miles), *Timor Islands* (28,000 sq. miles); with the exception of a portion of Borneo and Eastern Timor, together with WESTERN NEW GUINEA, with a total area of 738,000 square miles, and a population (1917) of 47,203,639, of whom as many as 34,157,000 live in the islands of Java and Madura. JAVA and MADURA (customs receipts, 1917, 27,174,995 florins) produce a sufficient supply of food for a dense population, besides furnishing sugar (1,844,135 tons exported in 1916), tobacco, tea, coffee, tin, and other products for exportation. The "outlying" islands are frequently administered by their own princes, subject to the directions of a Netherlands Resident. There was (1919) a colonial army of 1,449 officers and 39,521 men. The colonial revenue for 1920 was estimated at £42,000,000 and the expenditure at £48,900,000. The exports, for private account, amounted in 1917, for Java, Madura, and the other outlying islands, to 992,420,000 florins, while the imports for the same year amounted to 474,724,000 florins.

In South America the colony of SURINAM, or Netherlands Guiana (imports, 1917, 7,645,941 guilders; exports, 8,528,170 guilders), embraces 49,845 square miles and contains (1917) 203,104 inhabitants; and in the West Indies, CUBAQUO (imports, £483,239; exports, £190,859; population, 34,893) and five other small islands belong to the Netherlands, having an area of 436 square miles, with a population of 22,726 (imports, £38,455; exports, £39,398).

NICARAGUA, Republic of.

President (1912-1924), Diego Manuel Chamorro, assumed office, Jan. 1, 1921.
Foreign Affairs, Mariana Zelaya.

Minister in London (vacant).

*Chargé d'Affaires, Eduardo Perez-Triana, 49 St. James's Street, S.W. 1.**Consul in London, Esteban M. Vargas, 63 Bishopsgate, E.C. 2.**Vice-Consul, Wynnes B. Gauld.*

The largest State of Central America, with a long seaboard on both the Atlantic and Pacific Oceans, situate between 9° 45'—15° N. lat. and 82° 40'—87° 38' W. long., containing an area of 51,660 English square miles and a population estimated at 800,000 in 1918, of whom about three-quarters are mixed blood and the rest Indians, besides the Mosquitos, who are mostly in a savage state.

Nicaragua was discovered by Columbus in 1502, and was overrun by the Spaniards under Davila in the first quarter of the 16th century, forming part of the Spanish Captaincy-General of Guatemala until 1821, when its independence was secured. The present constitution rests on the fundamental law of Nov. 10, 1911 (amended 1913) and is that of a centralised republic. The President is elected by direct suffrage for four years.

The chief products are coffee, bananas, rice, beans, sugar, cocoa, and tobacco; large quantities of foodstuffs are imported, in addition to cottons and other manufactures from the United States. There are 172 miles of railway open, and 1,591 miles of telegraph. Corinto is the chief commercial port.

The official language of the country is Spanish.

Vice-Consul, C. Kruse Jensen.

Norway, an independent kingdom, founded in 872 (fundamental law of May 17, 1814), was united with Sweden under the same King from Nov. 4, 1814, to June 7, 1905, when the union was dissolved. The Parliament of 150 members is called the "Storting," which is divided into two sections, chosen by itself to discuss projected Bills, called "Odelsting" and "Lagting." Norway, the western and northern portion of the Scandinavian peninsula, is about 1,100 miles in length, its greatest width about 250 miles. It is divided into 20 provinces, or fylker, and comprises an area of 124,130 sq. miles with a population (1920) of 2,646,306. The coast-line is extensive, deeply indented with numerous fjords, and fringed with an immense number of rocky islands. The surface is mountainous, consisting of elevated and barren tablelands, separated by deep and narrow valleys. The cultivated area is about one-thirtieth part of the country; forests cover nearly one-fourth; the rest consists of highland pastures or uninhabitable mountains.

Agriculture, though pursued with some vigour of late, is unable to furnish sufficient produce for home consumption; hence it has been necessary to import considerable quantities of corn, meat, and pork. The fisheries give employment to a large part of the population throughout the year. The most important are cod and herring; the exports of these with other sea-products and fish-oil were valued at 234,077,000 kroner* in 1919. The mineral products are increasing, the total value won in 1919 being 37,131,000 kroner. Timber-dressing, mechanical engineering, textile manufactures, ship-building, pulp-making, and electro-chemical products are the principal departments of Norwegian industry. The exports of produce of the forests were valued at 126,192,000 kroner in 1919. The imports consist chiefly of the necessary articles of consumption. The chief exports consist of timber, matches, fish, oil, and other products of the fisheries, pulp, paper, skins and furs, nails, minerals, stone, ice, calcium carbide, condensed milk, butter, margarine, tinned goods, saltpetre, &c. Norway voted for prohibition of alcoholic beverages in 1919 (385,000 for prohibition, 275,000 against).

Defence.—Service in the National Militia is universal and compulsory. The peace strength is 121,500 all ranks, and the war effective is about 400,000 of all ranks. In time of war all males between the ages of 25 and 35 are liable for service. The Navy consists of 4 ironclads, 29 torpedo-boats, a gunboat, 4 destroyers, 4 submarines, and 20 minelayers.

Education is compulsory and free between the ages of 7 and 14, schools being maintained by

local taxation with State grants in aid. The attendance is high. Secondary schools are provided by the State, by local authorities, and privately. There are many special schools and industrial and technical institutes. The University of Christiania was attended in 1920 by 1,550 students.

Communications.—The total length of railways open in 1920 was 2,022 miles, of which 271 miles were private lines. The length of telegraphs and telephones belonging to the State in June, 1920, was 16,210 miles. The mercantile marine, Jan. 1, 1921, consisted of 2,828 vessels, of 1,528,100 tons. During the War, Norwegian vessels of 1,237,122 tons were sunk by torpedo or mine, and 224 seamen were killed; in addition, 69 vessels of 66,800 tons and 943 seamen are "not accounted for," and are presumed to have been destroyed by torpedo or mine.

PAPACY, The.

The office of the ecclesiastical head of the Roman Catholic Church is vested in the Pope of Rome, who is the Sovereign Pontiff of the Western Church, and claims temporal power over the Papal States which were incorporated with Italy from 1860 to 1870, the territory of the Papacy now being confined to the palaces of the Vatican and the Lateran and the Villa of Castel-Gandolfo, which are guaranteed to the Pope (with a yearly indemnity of 3,250,000 lire, which is neither claimed nor paid) by the Italian Government.

Sovereign Pontiff (259th), His Holiness Pope Benedict XV. (Della Chiesa), born at Genoa Nov. 21, 1854, elected Pope (in succession to Pius X.) Sept. 4, 1914.

British Envoy Extraordinary & Minister Plenipotentiary (Special Mission), Count de Salis, K.C.M.G., C.V.O.

Consul-General in London, Alfred James, 14, Chiswell House, Finsbury Pavement.

An inland State of South America, situate between 20°-6° 30' S. lat. and 54°-62° W. long. The area of Paraguay (exclusive of the Chaco) is computed at 75,700 square miles, and it contains a population of about 800,000.

Paraguay was visited in 1537 by Sebastian Cabot, and in 1535 was settled as a Spanish possession. In 1811 Paraguay declared its independence of Spain, and from 1814-1840 was governed by Francia, a Paraguayan despot, who was succeeded by Lopez, 1840-1862. In 1862 Francisco Solano Lopez succeeded his father, and in 1864 declared war against Brazil, Argentina and Uruguay being involved in the struggle. Against these three nations Lopez conducted a five years' war, which terminated in his defeat and death at the Battle of Cerro Cord, March 1, 1870. This dogged struggle reduced the country to complete prostration, and the population, which was 800,000 in 1857, is alleged to have fallen in 1870 to 250,000, of whom barely 30,000 were men. The present constitution was adopted

at the close of the war, and under its provisions the head of the executive is the President, elected by an electoral college for four years and ineligible for office for eight consecutive years after the expiration of his term. A Vice-President is similarly elected, and succeeds automatically in the case of the death, expulsion or absence of the President. There is a Cabinet of 5 members.

Paraguay proper consists of a series of plateaus, intersected by abrupt ranges of hills, some of which reach an altitude of 2,000 to 3,000 feet above sea level. The Paraguay and Alto Paraná rivers are navigable at all seasons for vessels of 6 to 7 feet draft. Many of the tributary streams are also navigable for much of the year. The Pilcomayo river is navigable for small craft for 180 miles from Asunción; but is liable to shrink unduly with drought. The plateaus are covered with grassy plains and dense forest, the soil being marshy in many parts and liable to floods; while the hills are covered for the most part with immense and valuable forests. The streams flowing into the Alto Paraná descend precipitously into that river. In the angle formed by the Paraná-Paraguay confluence are extensive marshes, one of which, known as "Neembucu," or endless, is drained by *Lake Ypoa*, a large lagoon, south-east of the capital. The *Chaco*, lying between the rivers Paraguay and Pilcomayo and bounded on the north by Bolivia, forms the subject of a long standing dispute with Bolivia; it is practically a dead level, though a slight and uniform rise westward is now known to exist, and suffers much from floods and still more from drought.

The chief agricultural products are tobacco, yerba maté, oranges, timber, quebracho extract, hides and cassava (mandioca), maize, rice, sugar-cane, ground-nuts, and other tropical and sub-tropical plants. The forests contain many varieties of timber, but only cedar and a few of the best known hardwoods find a market abroad. Stock-raising, lumbering, tobacco growing, and the gathering of *Yerba* (Paraguay tea), are the principal industries. The chief articles of export are hides, timber, yerba maté, tobacco, quebracho extract, cattle and meat products, oranges, and petit grain oil. The Army numbers 2,000 to 3,000 men. A railway, 232 miles in length, which belongs to an English company, connects Paraguay with the Argentine railway system. The journey from Asunción to Buenos Aires (685 miles) occupies 53 hours. Train ferries enable the run to be accomplished without break of bulk. The language is Spanish.

Revenue (Estimate)	1921-2
Expenditure (do.)	£675,690
Foreign Debt (Dec. 31, 1920)	768,006
Internal Debt (do.)	1,302,200
	762,629
	1920.
Imports	2,623,702
Exports	3,937,116
Imports from U.K. (1920)	521,163
Exports to U.K. (1920)	95,900
Exchange (Jan., 1921), for cheques on London, about \$190 to £1.

Consul-General in London, Sir Harry Foster, 82 Victoria Street, S.W. 1.

Persia—called by the natives Irán—comprises an area of 630,000 sq. ms., with a population estimated at 10,000,000. By the Anglo-Russian Convention of Aug., 1907, Great Britain and Russia mutually engaged to respect the integrity and independence of Persia, while marking out certain regions in S.E. and N.W. Persia respectively in which each had, for geographical and economic reasons, special interests. On Aug. 9, 1920, this Agreement was superseded by a Treaty between Great Britain and Persia, by which Great Britain agrees to respect the integrity of Persia, and to provide a loan of £2,000,000, in return for the security of diplomatic and commercial relations between the two countries, and for the purpose of establishing order and developing the resources of the State. This agreement was, however, never put into force, and was denounced by the Persian Government (with the concurrence of Great Britain) in Feb., 1921.

In March, 1921, Persia signed a treaty with the Russian Soviet Republic, which provides (*inter alia*) for mutual diplomatic and consular representation, restores to Persia Firuzeh and Ashurada, annuls all concessions previously granted to Russians in Persia, hands over the Russian Discount and Loan Bank to the Persian Government, cancels all Persian debts to Russia, denounces all previous Russo-Persian treaties, abolishes the "capitulations" as regards Russian subjects in Persia, and denounces all treaties made between Russia and third Powers regarding Persia.

Persia is mostly an arid table-land, encircled, except on the east, by mountains, those in the north rising to 18,700 ft. The central and eastern portion is a vast salt desert. The only navigable river is the Karun, which

was opened to foreign navigation from Mohammerah to Ahwaz in 1888. There are only 8 miles of railway open, and travelling is mostly by caravans, and transport by pack-animals. The cost of carriage is, therefore, very heavy. An option for the construction of a railway from Khanikin to Tehran *via* Kermanshah and Hamadan (with a branch to Enzeli on the Caspian) was granted in 1900 to the Persian Railways Syndicate.

The chief products are cereals, cotton, gums, dried fruits, silk, tobacco, and opium. The minerals (little worked) are salt, iron, coal, copper, lead, sulphur, &c., with turquoises. Oilfields in Southern Persia have been successfully worked by an English company since 1902. The only important manufacture is that of woollen carpets (mostly a domestic industry), but shawls, silks, and cotton fabrics are also produced. There are extensive forests in the north and west. Sheep and goats are numerous, and good wool is produced. The principal towns are Tehran (pop. 220,000), Tabriz (180,000), Isfahan (80,000), Meshed (80,000), Kerman (50,000), Yazd (60,000), and Shiraz (60,000). The Persians are mostly Shiah Muhammadans; but there are many adherents of Babliam (an eclectic form of Deistic religions), and Armenian Christians. The laws and popular education are based on the precepts of the Koran. Persia is divided into provinces, of which the principal are under Governors or Governors-General.

Owing to increasing popular discontent with a corrupt and incompetent administration and an extravagant Court, a nationalist movement began in Dec., 1905. In Aug., 1906, the Shah, Muzafer-ud-Din, admitting the need for reforms, granted a Constitution. He was succeeded in 1907 by his son Muhammed Ali Shah, who was deposed by the National Assembly in 1909, to be succeeded by his son, Sultan Ahmad Shah (under the regency of Nasr-ul-Mulk, until 1914).

The revenue (£1,480,780 in 1913-14) is derived from land tax, Crown lands, customs, opium, salt, and lease of monopolies. The foreign debt of Persia amounted (Dec. 31, 1916) to £6,325,700. The apparent increase in the trade figures is due to the fall in the exchange. The British Empire was the chief trader in 1917-18, and sent about three-fifths of the total imports. The sea-borne trade of Persia passes chiefly through the ports of Bushire, Bunder Abbas, and Mohammerah, and *via* Baghdad. The shipping of the Persian Gulf is principally British. Persia's chief imports are cotton piece-goods (mainly from England and India) and sugar (from Russia and France), with tea, cotton yarn, metal wares, gold and silver, petroleum, and indigo. The principal exports are dried fruits, raw cotton, pearls, opium, rice, wool, fish, hides and skins, carpets, and silk cocoons.

	1917-18.	1918-19.
Imports	£15,602,000	£15,876,000
Exports	11,300,000	9,022,000
Imports from U.K. (1920)	—	2,246,711
Exports to U.K. (1920)	—	3,743,303

Peru is a maritime Republic of South America, situated between $1^{\circ} 31' 29''$ and $19^{\circ} 13' S.$ latitude and between 69° and $81^{\circ} 19' W.$ The territory between $1^{\circ} 47' S.$ and $19^{\circ} 13' S.$ is still occupied by Chile, and representations are again being made for the return of these provinces, which were occupied by Chile during the Pacific War of 1879-1882. The area of the Republic is estimated at 532,000 square miles, and the population at 3,530,000. It is bounded on the north by the republics of Ecuador and Colombia, as the latter claims a territory in the Amazonian basin; on the east by Brazil and Bolivia, and on the south by Chile and Bolivia.

Peru was conquered in the early 16th century by Francisco Pizarro (born 1478, died 1541), who subjugated the Incas (a tribe of the Quichua Indians), who had invaded the country some 500 years earlier, and for nearly three centuries Peru remained under the Spanish rule. A revolutionary war of 1821-1824 established its independence, declared on July 28, 1821. The constitution rests upon the fundamental law of Oct. 18, 1866 (amended Nov. 25, 1860), and is that of a democratic Republic under a newly drawn constitution of 1919. The President is elected for five years by direct vote of the people.

The country is traversed throughout its length by the Andes, running parallel to the Pacific coast, the highest points being Huascarán (22,090 feet), Huandoy (21,100 feet), Arquipa (or Misti) volcano (20,013 feet), Huacala (20,000 feet), and Lirima, Tocora, and Sarasara, all over 19,000 feet. There are four distinct regions, the *costa*, west of the Andes, a low arid desert except where watered by transverse mountain streams, but capable of irrigation; the *sierra* or western slopes of the Andes; the *punas* or mountainous wastes below the region of perpetual snow; and the inward slopes and boundless forests of the Amazonian basin. The coast region is sandy desert, except where watered by transverse mountain streams, but capable of cultivation in the highest degree by irrigation. The valleys running to the coast are very fertile, and the mountains are rich in minerals, among which silver, quicksilver, copper, coal (of inferior quality) and vanadium are conspicuous; while in the department of Tumbes, along the coast, there are important beds of petroleum. Gold is found in many districts, but especially in the province of Carabaya, where mining on an important scale is carried on. The eastern provinces are of vast extent and fertility, with a tropical climate. The medicinal productions of that region are of great value, comprising cinchona, or Peruvian bark (of which little is now exported), sarsaparilla, copaliba, &c. India-rubber is an important product of the country. Coca, cocoa, and coffee are grown on a small scale. Sugar and cotton are the staple agricultural articles of the

country. The Lobos and other islands on the Pacific coast provide guano.

The principal imports are coal, cotton, woollen, linen and silk goods, drugs, earthen and stone wares, machinery, explosives, metals and manufactures thereof, oils, stationery, paper manufactures, timber, and wheat. The chief exports are minerals and metals, petroleum, raw cotton, sugar, hides and skins, gums (chiefly rubber) and wool. In 1928 the U.S.A. sent 54.3 of the imports and took 45.6 of the exports, while the U.K. sent 16.1 per cent. and took 31.7 per cent.

The total length of the railways open (1919) was about 1,920 miles. There is also steam navigation on Lake Titicaca and the River Desaguadero. The eastern rivers are also navigated to some extent by steam craft. Wireless telegraphy stations have been established in many places.

Defence.—The Army is recruited by voluntary enlistment, supplemented by conscription, and numbers about 5,000 of all ranks; the Navy includes two cruisers built at Barrow, and a destroyer bought from the French Government, and a submarines.

Spanish is the official language of the country, but native dialects (of which Quichua is the most important) are spoken by a considerable portion of the Indian population.

The Republic of Poland was proclaimed at Warsaw in November, 1918, and under the *Treaty of Paris* (June 28, 1919) the assentors to the Covenant of the League of Nations, and the signatories of the Treaty of Peace, guarantee the independence of the Republic, which is reconstituted (as far as possible) within the limits of the 18th century "Polish Commonwealth." This state extended in the year 1772 over an area of 253,000 sq. miles, and included a population of about 13,000,000. The political neighbours of the Republic are the Baltic Sea, the German Republic (Prussian Königsberg District), and the Republic of Lithuania, in the N.; the Republic of Czechoslovakia in the S.; Soviet Russia in the E.; and Germany in the W. The present area of the Republic may be estimated at 300,000 sq. miles, with a population of 30,000,000, but the disposition of the Regency of Opole (Upper Silesia) has yet to be determined by plebiscite. The predominant religion of the people is Roman Catholic, but all faiths enjoy equality, and there are a considerable number of Protestants and a very large number of Jews.

In 1919 hostilities broke out between Poland and Soviet Russia, and after initial successes the "Red" armies of Bolshevik Russia appeared (in August, 1920) likely to deal a crushing blow at Polish independence, the capital (Warsaw) being in peril of capture. A dramatic counter-attack by the Polish troops at the critical period reversed the nature of the campaign. Poland was enabled to obtain peace on favourable terms, and claimed the recognition by the Soviet at Moscow of about 250,000 sq. kilometres, containing a population of 1,330,000 Poles, 1,200,000 Ruthenians, 900,000 Ukrainians, 550,000 Jews and 500,000 of various nationalities. The advance of the Polish armies into Lithuania was the cause of anxiety among the Supreme Council of the Allies in the autumn of 1920.

GOVERNMENT.—A Republican form of government was adopted by the Constituent Assembly in 1921, the President exercising the executive authority through a Ministry responsible to the Legislature. The Legislature consists of a Diet (*Sejm*) elected by universal adult (male and female) suffrage.

PRODUCTION.—Mining, cotton, metal work, agriculture, forestry and stock raising are the principal industries, the chief crops being rye, wheat, oats, barley, potatoes, and sugar-beet; the live stock includes cattle, horses, sheep, and pigs. There are valuable coal mines in Upper Silesia, Russian Poland, and Little Poland (Galicia); zinc, lead ore, mineral and potassium salts, and in Galicia (Boryslaw) are famous oil fields. The chief manufactures are textiles, those of minor importance being machinery and metal works, chemicals, and leather. The exports in former years were principally agricultural produce and textiles, the imports being raw wool, cotton and jute, woollen and cotton goods, and machinery.

DEFENCE.—In July, 1921, the war strength of the Polish army was 400,000 all ranks; the peace effective of this army is intended to be kept at 27,000 officers and 270,000 other ranks. A small navy, for coastal defence, is being organized.

EDUCATION.—Education is compulsory and free, and there is considerable voluntary effort in addition to the work of the State. Secondary education is conducted on a high level, with good attendances, and there are universities at Cracow (founded 1364), Warsaw, Łwów, Poznań, Lublin, and Wilno; Polytechnics at Warsaw and Łwów, and an Academy of Science at Cracow.

COMMUNICATIONS.—There are about 11,000 miles of railway and over 20,000 miles of telegraph line, with well-developed telephone systems in all the large centres. Over 4,000 miles of navigable waterways exist on the Vistula, Nareth, Bug, Warta, and Pillica, of which about 1,200 are navigable by steamers. The free city of Danzig is within the Polish Customs area, free transit for Germany being guaranteed.

FINANCE.—The revenue for 1920-21 was estimated at 135,166,000,000 and the expenditure at 208,967,000,000, showing a deficit of nearly 74 milliards of Polish marks, which will be partly met by a loan and partly by credit operations. The note issue increased from 4,846,110,000 Polish marks in Jan. 1920 to 49,359,485,439 in Dec. 1920; the exchange on London fell from 520 marks (Jan.) to 2,150 marks = £1 (Dec.). Temporary national currency: Polish mark: about 3,500,000,000 in circulation, besides some 3 milliards roubles, a milliard German marks and 5 milliards Austrian kronen (total of about 15 milliards Polish marks). The Polish mark has been adopted at the ratio of 70 Galician kronen = 100 Polish marks.

The capital, WARSAW, on the Vistula (which is spanned by four magnificent bridges) contains many fine buildings; its population in 1924 was about 800,000, and in 1929 about 1,000,000. Other large towns are Łódź (450,000), the centre of the textile industry; Posen, at the confluence of the Warta and Cybina rivers (260,000), Cracow, on the Vistula (170,000), Białystok (120,000), and Sosnowice (100,000).

Vice-Consul (London), Maj. M. C. V. Hurst,
 Queen Anne's Mansions, St. James's Park, W. 1.

Portugal lies in 37°—42° N. lat. and 6° 15'—
 9° 30' W. long., being 360 miles in length from
 N to S., and averaging about 100 in breadth
 from E. to W. Continental Portugal contains
 an area of 35,500 square miles, with a population
 in 1920 of 6,399,335, and the Portuguese Colonies
 a total area of 804,841 square miles, with a popu-
 lation estimated at 9,675,000. The Azores and
 Madeira are regarded, not as colonies, but as
 a part of continental Portugal. The chief
 products are wheat, barley, oats, maize, flax,
 hemp, and the vine in elevated tracts; in the
 lowlands, rice, olives, oranges, lemons, citrons,
 figs, and almonds. There are extensive forests
 of oak, chestnut, sea-pine, and cork, the culti-
 vation of the vine and the olive being among
 the chief branches of industry; the rich red
 wine known to us as "port" is shipped from
 Oporto. Its mineral products are important—
 copper, lead, tin, antimony, coal, manganese,
 iron, slate, and bay-salt, which last, from its
 hardness and purity, is in demand. Its manu-
 factures consist of gloves, silk, woollen, linen,
 and cotton fabrics, metal and earthenware
 goods, tobacco, cigars, &c. The exports consist
 to the extent of 90 per cent. of wine, which is
 the chief industrial product of the country;
 others are cork, cattle, copper-ore, fruits, oil,
 sardines, and salt. The imports are manufactured
 goods—hardware, cotton and woollen stuffs,
 machinery, wheat, sugar, dried fish, coal, &c.
 The commercial marine (1927) numbered 124
 steam and 102 sailing vessels, with a tonnage of

122,726. In 1928, 5,566 vessels, of 3,284,995
 tons, entered the ports of the Republic. Rail-
 ways 1,827 miles in extent were open for traffic in
 1917, and there were 5,321 miles of telegraph line
 in 1917. For many years the national income
 was considerably less than the expenditure;
 this deficiency has added to the national debt.

Defence.—Service in the militia is universal
 and compulsory. The peace effective is about
 32,000. War strength, about 150,000. The
 Navy consists of 1 coast-defence ship, 4 pro-
 tected cruisers, some old pattern gunboats, 4
 destroyers, and 3 submarines and 4 gunboats,
 acquired in England (1920), and 6 ex-Austrian
 destroyers, manned by about 4,898 sailors.

Education is free and nominally compulsory
 between the ages of 7 and 15, but is not strictly
 enforced, and over 75 per cent. of the population
 above 7 years old are illiterate. Secondary
 education is conducted in State lycées. There
 are also military, naval and other special schools.
 The University of Coimbra (1921) had 1,202
 matriculated students in 1920.

PORTUGUESE COLONIES

PORTUGUESE INDIA has a total area of 1,470 square miles, with a population of 605,000, and includes Goa, Damann, and Diu. Revenue, 1909-10, £223,000; imports, £1,316,000; exports, £220,000.

MACAO, in China, on the Canton River, has an area of 3 square miles and a population of 80,000. Revenue, 1909-10, £127,300; imports, £1,580,000; exports, £1,700,000.

PORTUGUESE TIMOR (the northern portion of the island), in the Malay Archipelago, has an area of 7,450 square miles, with a population of 300,000. Revenue, 1910-11, £40,000; imports, £80,000; exports, £64,000.

CAPE VERDE ISLANDS, off the west coast of Africa, have an area of 1,475 square miles and a population of 150,000. Revenue, 1909-10, £90,000; exports, £70,000; imports, £380,000.

PORTUGUESE GUINEA, on the west coast of Africa, has an area of 14,000 square miles and a population of 400,000. Revenue, 1909-10, £62,000; exports, £12,000; imports, £180,000.

SAO TOME and **PRINCEIP ISLANDS**, in the Gulf of Guinea (area 442 square miles, population 45,000). Revenue, 1909-10, £186,500; imports, £520,000; exports, £650,000.

PORTUGUESE WEST AFRICA (Angola and Kabinda) has a total area of 480,000 square miles, with a population of 5,000,000. Revenue, 1917-8, £1,350,000; exports (1919), £1,180,000; imports, £1,020,000.

PORTUGUESE EAST AFRICA (Delagoa Bay, Gazaland, Inhambane, Mozambique, Nyasa, Quilimane, and Tete) has a total area of 300,000 square miles, with a population of 3,000,000. Revenue, 1917-8, £950,000; total trade (imports and exports), £3,600,000. A scheme for a trans-continental railway from Benguela (Lobito Bay) in Angola, traversing the Katanga mineral district of the Congo and thence running south-

wards through Rhodesia to Bulawayo and eastwards to Beira is being developed under British, Belgian and Portuguese control.

Rumania is a kingdom of South Eastern Europe in the classical *Dacia*, the territory roughly defined by the three great rivers Danube, Theiss, and Dniester, whose central point is the line of the Carpathians. The territory is known as Wallachia, Moldavia, Bessarabia, Bukovina, Crizana-Maramuresh, Transylvania, with part of the Banat and of the Dobruja. The kingdom has its origin in the union of the Danubian principalities of Wallachia and Moldavia (and the addition thereto of a strip of Southern Bessarabia) under the Treaty of Paris (April, 1856). The principalities remained separate entities under the suzerainty of the Turkish Empire until 1859, when Prince Alexander John Cuza was elected Prince of both Principalities, still under the suzerainty of the Porte. Prince Cuza abdicated in 1866 and was succeeded by Prince Charles of Hohenzollern-Sigmaringen, in whose successors the crown is now vested. By the Treaty of Berlin (July 13, 1876) a new Principality (Bessarabia)

of the two above mentioned) was recognised as an independent State, and part of the *Dobruja* (which had been occupied by the Rumanians) was incorporated in the new Principality. On March 27, 1881, the former Principality was recognised by the Great Powers as a Kingdom. Rumania is not a "Balkan" State. She took no part in the military operations of the Balkan League against Turkey in 1912-13. Her unexhausted military power secured for her a readjustment of her south-eastern (*Dobruja*) frontier in 1913. In the War of 1914-1918, Rumania fought on the side of the Allies from Aug. 27, 1916, and after many vicissitudes (due mainly to the sudden collapse of the Russian Armies in 1917), she emerged in triumph at the cessation of hostilities. Her territories were greatly increased as a result of the War, and the *ante bellum* area of the Kingdom (53,000 sq. miles) was more than doubled by the inclusion within its borders of *Bessarabia*, *Transylvania*, *Bukovina*, and part of the *Banat* of *Temesvar*. The area of the enlarged Kingdom of Rumania may thus be estimated at 122,282 sq. miles, and the 1924 population of 7,000,000 has been increased to 17,000,000. The dominating religion is that of the Greek (Orthodox) Church.

GOVERNMENT.—The government is that of a Constitutional Monarchy, the legislative assembly consisting of a Senate (56 members) elected for 8 years, and of a Chamber of Deputies (361 members) elected for 4 years by universal suffrage, provision being made for the proportional representation of minority races. The executive is entrusted to a council of ministers.

PRODUCTION.—The soil of *Walachia*, *Bessarabia*, and *Moldavia* is among the richest in Europe, and it was stated in August, 1921, that "from a comparative point of view Rumania would probably be one of the first war convalescents to attain complete recovery." The wheat crop for 1929 was estimated at 7,000,000 quarters (of 480 lb.). The agricultural produce consists of wheat, maize, millet, barley, rye, beans, and peas. Vines and fruits are abundant. The fertile plain of *Transylvania* yields large crops of maize, wheat, rye, oats, flax, and hemp, and the rich lands of *Bessarabia* produce wheat, maize, barley, flax, tobacco, water melons, fruit, and grapes. Agriculture and sheep and cattle raising are the principal industries of the kingdom, but the climate of this part of South-Eastern Europe is of the Continental character, with intense winter cold and summer heat, and fierce summer droughts sometimes defeat these principal industries. The forests of the mountainous regions are extensive (11,888,792 acres), and the timber industry is important. The country is rich in minerals, and produces petroleum, salt, coal, lignite, iron, gold, and mica; the workers in the oilfields number about 50,000 and are the largest single unit of workers in any one industry. Manufactures are in their infancy, and the imports are chiefly the manufactured goods of Western Europe; the exports consist principally of wheat, barley, maize, oats, petroleum, timber, cattle, salt and hides. All estates over 1,335 acres have been expropriated and divided among the peasants.

ARMY.—Service in the Army is universal and compulsory. In the War of 1914-1918 over 900,000 all ranks passed into the Armies of

Rumania, and of this number over 25 per cent. were killed or returned as "missing." At the resurgence of Nov. 1918, an army of 400,000 was again in the field. This force was the deciding factor in the Rumanian-Hungarian question, and it drove the Bolshevik dictator (*Bela Kun*) into exile from *Buda Pest*. There is a small Navy on the Black Sea (30 vessels) and on the Danube.

EDUCATION is free and nominally compulsory, there being 29,374 schools with 1,612,763 in attendance. Secondary schools are well attended. There are also special schools and Universities at *Bucharest*, *Jassy*, *Cluj*, and *Cernauti*. A Government High School of Commerce was opened in 1923.

COMMUNICATIONS.—In 1929 there were about 7,131 miles of railway open for traffic in the whole kingdom; railway communication requires great development in order to cope with the problem of carrying the cereal crops to the shipping ports. There are 19,715 telegraph and telephone offices. The mercantile marine consists of about 120 steamers and 600 sailing vessels. The Black Sea port of *Constantza* (*Dobruja*) is linked with the interior by a railway. A European Commission, exercising sovereign powers over the navigation of the Danube, has its seat at *Galatz*.

Foreign Trade Commissioner, Krassin.

The area of Soviet Russia cannot be stated with accuracy, owing to the ebb and flow of the various conflicting forces. It may, however, be estimated at 1,650,000 square miles (with a population of about 100,000,000) West of the Ural Mountains; and at 3,200,000 square miles (with a population of about 8,000,000) East of the Urals (Siberia, exclusive of Yakutsk).

A census taken under the auspices of the Soviet Government in August, 1920, gave a population of about 136,000,000, of whom 47 per cent. were males and 53 per cent. females; estimates appear to have been made for the territories not immediately under the control of the Soviet Republic.

Prior to the War of 1914-8 the *Russian Empire* of the Tsar Nicholas II. covered more than 8,500,000 square miles, with a population of about 183,000,000. Included in this area were the present Republic of Finland, the Russian portion of the Republic of Poland, the Baltic Republics of *Estonia*, *Latvia* and *Lithuania*, the Southern Republics of *Georgia*, the *Ukraine*, and the *Don*, the Caucasian Republics of *Kuban* and *Azerbaijan*, and the Russian portion of the Republic of *Armenia*, while the States of *Khiva* and *Bokhara* were dependencies of the Empire.

The Central Government of this vast area was an absolute autocracy, the country being regarded as the estate of the autocrat and the public revenue as his private income, from which the expenses of administration were met. Reforms of various kinds were introduced from time to time. The peasants, who constituted 75 per cent. of the inhabitants, were freed from the condition of serfdom in 1861 by the Tsar Alexander II., and land was allotted to them in communal ownership. After the disasters of the Russo-Japanese War of 1904-5 the Tsar Nicholas II. published a rescript foreshadowing a constitutional form of government. In 1906 the Imperial Duma (parliament), elected under the tentative constitution, was opened by the Tsar, but it possessed little authority and its recommendations were usually ignored, while it was liable to be dissolved at the will of the Tsar. The government in force at the outbreak of the War in 1914 was "Constitutional" in name alone, as the limits to the power of the ruler were subject to the possibility of an immediate and complete resumption of the former autocracy, at the will of the autocrat.

Local Government, on the other hand, was highly developed. In the rural districts (containing 80 per cent. of the inhabitants) the village communities elected councils under the presidency of a *starosta* (mayor), villages being

grouped into provinces and thus into governments, with larger elective councils for the administration of local affairs. Combined with this system of village communities was a highly organised system of co-operative trading, the villagers being grouped by voluntary association into districts, usually corresponding with local government areas. The produce of the soil was disposed of in return for manufactures obtained by the Society and distributed at the Co-operative shops. Municipalities were also administered by elective councils under the presidency of a mayor, but in many cases the local authority of such municipalities was overshadowed by the superior authority of the military governor.

Education was not widespread in the Tsar's dominions. Primary schools afforded only the most elementary instruction, and the attendance was voluntary, while they were closed in rural districts during the summer months. Secondary schools existed only in the great cities, and the eleven universities had only 40,000 students of both sexes. Fully 90 per cent. of the peasants (i.e. 72 per cent. of the people) were illiterate. A rural *starosta* who could neither read nor write was in no way unusual, and accounts were frequently kept for the local branch of the Co-operative Society by the village schoolmistress or by the priest, the *abacus* being employed by the shopkeeper for simple additions of roubles and kopeks by means of moveable balls (of different colours) on a wire frame.

For many years a sullen undercurrent of unrest had been noticeable in Russia, particularly among the University students and the educated classes. The movement spread rapidly among the workers and peasants from about the year 1860, and was secretly organised in 1869 as the "Society for the Liberation of the People." The reforms originally demanded were reasonable and neither anti-dynastic nor revolutionary. They were resisted principally because they were regarded as premature. The impatient extremists endeavoured to hasten reform by violent means, and resorted to terrorism and assassination to achieve their aim, which was criticised as a desire to reduce rule to anarchy, and to substitute for existing authority "nothing," as expressed in their nickname. This *Nihilism* was kept in check by a large force of Secret Police, whose methods were generally arbitrary and frequently inhuman, arrest on suspicion of membership of a secret society, or of sympathy with Nihilism, being followed by banishment for life or by penal servitude in the mines of Siberia.

Involved in the War from Aug. 1, 1914, the military forces of the Tsar fought against the armies of the Central Powers with varying success. On March 12, 1917, owing to the avowed hostility of the Duma, the Tsar Nicholas II abdicated, but the successor nominated by him was not admitted to power, and a provisional government was set up under Prince Lvov. On May 26, 1917, this administration was taken over by a Republican Cabinet under Alexander Kerensky, but Kerensky failed to establish a settled government. Administrative chaos was

* The Tsar Nicholas II. with the Tsaritsa, Tsarevitch Alexis (their apparent), and the Princesses (and such faithful adherents as remained to them), were arrested by order of the Kerensky Cabinet. They were subsequently captured by the Bolsheviks, and on July 18, 1918, the Tsar and his family and attendants were butchered in cold blood.

followed by a *débâcle* in the field, and the armies of Russia, hitherto a bulwark of the Allied cause, retreated in panic from the battle line, many of the soldiers abandoning their arms and returning to their homes.

On Nov. 7, 1917, a military revolution transferred the power from the Republican Cabinet of Kerensky to "People's Commissioners," appointed by an "All Russia Congress of Soviets," the Soviets being Councils of delegates elected by workmen, soldiers and peasants throughout the country.

The opposing theories of government were known as "Maximalist" and "Minimalist" rule, the Soviets claiming to represent the Maximalists or largest class, the Republican Cabinet being accused of representing only the *bourgeoisie*, or smallest (Minimalist) class. The Maximalists or *Bolsheviks* (Bolshevik = majority) professed to act in the name not only of the people of Russia, but in harmony with a projected "Federation of the Proletariates of the World."

Meanwhile, the armies of the Central Powers advanced victoriously into Russian territory, and after granting an armistice they imposed on the Soviet government the crushing conditions of the *Treaty of Brest Litovsk* (March 3, 1918), which remained effective until the military strength of Germany and Austria was broken by the Allies.

The Bolshevik régime had been fostered by the Central Powers and was opposed by the Allies, who sent such naval and military help as could be afforded to various bodies who were stemming the tide of Bolshevism in Siberia (Admiral Koltchak), South Russia (Denikin), and North Russia (Tchaikovsky), mainly with a view to create a diversion on the eastern German-Austrian front, and in response to a declaration of war by the Soviets against governments which were held by them to be representative of Minimalist rule and of the *bourgeoisie* they had pledged themselves to eradicate.

In 1919 the Soviet armies met with almost universal success in their encounters with the forces from Siberia. Koltchak was driven across the Urals and his armies were dispersed, the leader being captured and put to death. Local resistance in North Russia was strengthened by Allied troops (principally from Great Britain and U.S.A.), and help was also rendered to General Denikin in the south. But the victorious close of the European War caused a growing reluctance among the Allied Nations for further military adventures, and the reinforcements sent in 1918 were withdrawn during the autumn and winter of 1919 from Archangel and Murmansk in the North, from Odessa in the South, and from Vladivostok in Siberia. The withdrawal preceded a collapse of the "White" resistance to the "Red" (Bolshevik) armies, and by the close of the summer of 1920 the greater part of Siberia and the Archangel

government were included in Soviet Russia. In 1920 war broke out between the Republic of Poland and the Soviet armies, in conjunction with operations under General Wrangel, the successor of Denikin in the South. After initial successes the Polish armies were driven back and Warsaw appeared to be in imminent danger of capture, when a dramatic recovery saved the Polish capital and brought about negotiations for peace on terms favourable to Poland, under the *Treaty of Riga* (March 19, 1921).

Soviet Russia is governed by the President and Council of the Peoples' Commissioners, in the name of the All Russian Congress of the Councils of Workmen's, Peasants' and Soldiers' delegates, of which the Council is the Central Executive Committee, nominally for the benefit of the People of Russia; but the so-called Bolshevik, or majority, rule is in effect that of a minority, and it is upheld by an army which contains at least 60 per cent. of foreign (largely Chinese) mercenaries, by methods in every way as undemocratic as those of Tsardom. "Liberty" is dismissed by the Soviet government as a *Bourgeois* superstition, and freedom of the Press and free speech are similarly regarded, while the Social Democrats (Mensheviks) and the Salvation Army are proscribed as "Counter-Revolutionary." The most powerful body in the country is a Secret Service Committee, known as the *Tche Ka*, which denounces all who are suspected of Counter-Revolutionary tendencies.

Before the War the annual revenue of the State was about 3,500,000,000 roubles (at the 1914 rate of exchange 9'458 roubles = £1 sterling).

The revenue and expenditure of Soviet Russia for 1918, 1919 and 1920 are as under in roubles:—

	Revenue.	Expenditure.	Deficit.
1918 ..	15,820,000,000	46,700,000,000	30,900,000,000
1919 ..	50,600,000,000	225,800,000,000	75,200,000,000
1920 ..	150,000,000,000	1,120,000,000,000	1,000,000,000,000

showing a deficit for 3 years of 1,106,100,000,000 roubles.

The State debt amounted, in 1914, to 8,811,380,000 roubles (£931,600,000), against which there was a gold reserve in the State Bank of 1,673,380,000 roubles (£175,900,000). In Oct. 1917 the State debt amounted to 32,300,000,000 roubles, including a number of loans contracted abroad, Great Britain being a creditor for the amount of £571,000,000 lent to Russia from Sept. 1915 to Oct. 1917, and the War debt to France amounted to a further sum of £160,000,000. All internal and external obligations of the State were repudiated by the Soviet government, but in 1921 there were indications of a desire to reconsider the repudiation of the external debt, in order that trade relations might be resumed. The internal debt has been increased by many millions of roubles monthly by the indiscriminate issue of paper money. Before the War of 1914 the paper rouble was worth about 2s.; on Oct. 4, 1921, the exchange in Moscow was quoted at 221,000 paper roubles = £1 sterling. All banks and financial and trading concerns and shipping enterprises have been declared to be the property of the proletariat, and the balances and credits have been dissipated by theft or neglect. Private ownership of land has been abolished and all real estate has been declared proletarian property. The Church was also disestablished and all Church property confiscated by the Soviet Government.

* Bolshevik propaganda work has been extensively carried on in Europe and the United States, but has gained few adherents in democratic countries. The principal agency for Bolshevik propaganda abroad is the *Rouss* (Russian Telegraph Agency), which has at its disposal considerable sums derived from the "nationalisation" of the banks and commercial houses of the *bourgeoisie*. Personal propaganda is directed by Koppelman Semenov. In 1920 the sum of £25,000 was collected by the Soviet government as a subsidy to the London Labour organ, *The Daily Herald*. The money available is derived principally from the sale of jewels of murdered Russian men and women.

The harvest of 1922 produced 21,478,322 tons of wheat, 25,842,956 tons of rye (the staple food of the peasants and workmen), 10,321,593 tons of barley, 15,669,368 tons of oats, 2,354,006 tons of millet, 2,862,206 tons of maize, 37,399,474 tons of potatoes, and 224,466 tons of tobacco. Before the War, Russia was one of the largest exporters of wheat, and produced a surplus of rye; but in 1921 the crops were reported to be insufficient for home requirements, and over two millions of the inhabitants are reported to be faced with starvation in the winter of 1921-22. The live stock included (1921) 52,052,000 cattle, 72,273,000 sheep, lambs and goats, 14,995,000 pigs, and 34,973,000 horses.

In 1923 the mineral output of Russia was 57,330,000 tons of coal (principally from the Donetz basin), gold, platinum (37 pounds of 36lb.), pig iron (7,400,000 tons), copper, quick-silver, salt and lead.

In 1924 the Imports into Russia were valued at 1,200,000,000 roubles, and the Exports from Russia at 960,000,000 roubles, a total trade (at 9'458 roubles = £1) of £127,480,000, the chief imports from the United Kingdom being machinery and coal, the exports to the U.K. being principally cereals, timber, eggs and flax. In March, 1921, the Tenth Communist Congress met at Moscow, and Ulianov Lenin is reported to have declared his abandonment of Communism and conversion to the principle of natural economic development under Trade Treaties with Great Britain and such other Powers as can be induced to enter into similar obligations.

In 1921 the trade of Russia with external countries was principally with Great Britain (28 per cent.), U.S.A. (22 per cent.), Germany (18 per cent.), and Esthonia (15 per cent.).

	1919.	1920
Imports from U.K. ...	£17,494,067	£16,833,383
Exports to U.K.	16,370,377	35,522,892

There were (1923) 46,839 miles of railway with a gross revenue of £112,213,000, 15,261 post offices carrying 2,663,900,000 letters, &c., and 476,177 miles of telegraph wire. Under Soviet administration the financial deficit on the working of the railways has increased in proportion as transport conditions have deteriorated. In 1922 the deficit was 6,000,000,000 roubles, in 1919 more than twice that amount, and in 1920 it was 51,000,000,000 roubles. The principal railway lines are the main European network from Petrograd, through Moscow to Astrakhan and across the Urals *via* Perm, Ufa, Samara and Saratov, with northern extensions to the Kola Peninsula and to Archangel and running southwards to the Baltic, the Crimea and the Caucasus; the *Trans-Siberian Line* from Chelyabinsk, on the Ural frontier, to Omsk, and round Lake Baikal to Chita and Stryetensk. From Chita the line crosses the Manchurian frontier (as the Eastern China Railway) to Harbin and Vladivostok, where a northward extension runs to Khabarovka. The projected *Amur Railway*, when completed, will connect Stryetensk with Khabarovko, and the *Trans-Siberian line* will thus connect the western and eastern limits of Russia on Russian territory. The *Trans-Caspian Railway* runs from Krasnovodak (opposite Baku) to Askabad, Merv, Bokhara, Samarkand, Khokand and Andijan, with a 200-mile branch from Merv to Kuzhik (near Herat) on the Afghanistan border. The *Orenburg-Tashkent Line*, from the European boundary, across the

Kirghiz Steppe to Kazaligsk, Perovak and Tashkent, whence a short line connects with the Trans-Caspian system. The *Trans-Caspian Line* runs through the autonomous Republics of Georgia, Azerbaijan and Armenia, from Batum and Poti, on the Black Sea, *via* Tiflis, to Baku, on the Caspian, where it is met by the European system of Rostov on the Don. From Tiflis branches run to Kars, and *via* Erivan to Mount Ararat on the Armenian frontier, and to the Persian frontier at Julfa. There are in European Russia about 150,000 miles of navigable rivers and canals and lakes, of which total about one-fourth of the distance is navigable by steam vessels, a further eighth by sailing vessels, and nearly one-third by rafts. In Asiatic Russia there are 85,000 miles of waterway, of which 20,000 miles are navigable. Some 175,000 persons were engaged in the traffic (1920), the vessels numbering (in 1920) 4,000 steamers and 23,000 sailing vessels. In 1906 the ships and rafts carried over 400,000,000 tons of goods.

The principal ports of Soviet Russia are Petrograd and Kronstadt on the Baltic; Archangel on the White Sea, and Ekaterinsk in the Kola River (Murmansk); Astrakhan at the mouth of the Volga (on the land locked Caspian Sea); Vladivostok and Nicolaieff on the Pacific; and Petropaulovsk in Kamitchatka.

On March 14, 1918, the seat of Government was transferred from Petrograd to Moscow, which had a population in 1924 of about 2,500,000, reduced by famine, assassination and misrule to about 700,000 in 1920. PETROGRAD (before the War "St. Petersburg") the former Capital, founded by Peter the Great on the banks of the Neva in 1727, had a population in 1924 of 2,000,000 (estimated at 1,000,000 in 1920). Other centres are Saratov (200,000), Kazan (170,000), Astrakhan (150,000), Tula (135,000), Minsk (120,000), Nijni Novgorod (100,000), Voronezh (90,000), Orel (88,000), Vitebsk (86,000), Kursk (80,000), and Yaroslavl (80,000). Archangel had about 45,000 inhabitants in 1924.

In various districts there are organized Governments, independent of Soviet Russia, and in other parts there is organised opposition to Soviet rule. The autonomous governments in Russia are:—

AZERBAIJAN.

Azerbaijan is a Transcaucasian Republic on the south-western shore of the Caspian Sea, extending from the Caucasus in the north to Persia in the south and from the Caspian on the east to Armenia and Georgia. The area is about 50,000 sq. miles, with a population estimated at 4 to 5 millions, of whom over 75 per cent. are Muhammadans.

The Capital is BAKU (pop. 250,000) on the shore of the Caspian Sea, the centre of the petroleum industry. Baku is connected by railway with Batum (Georgia) on the Black Sea, *via* Tiflis, and with Moscow, *via* Rostov. Other towns are Yelisebethopol, Derbent, Kuba and Shemakha.

The Republic has been formally recognised by the Allied Powers.

THE DON.

The territory of the Cossacks of the Don declared itself a Republic in Jan. 1922. Area about 63,000 sq. miles, population (1924) 3,700,000. The Republic covers the greater portion of the valley of the Don, and extends to the mouth of the river at the Sea of Azov. The

largest town is Rostov on the Don (pop. 1914, 120,000), and the seat of government is at the former Provincial capital, NOVOCHERKASS (pop. 1914, 75,000). *Ataman of the Don (Governor), General Krasnov.*

GEORGIA.

A former Kingdom in Transcaucasia, with a history of more than 2,000 years as a State, was annexed by Russia in 1821 in violation of the Treaty of Alliance of 1783. At the beginning of 1918 it regained its independence. The *Republic of Georgia* comprises the former governments of Tiflis and Kutais, the districts of Zakathali, Sodehi, Sukhum and Batumi; the total area (excluding the Province of Lazistan, now Turkish, and claimed by Georgia ethnographically), is about 45,000 sq. miles with a population (1915) of 3,175,156. The Republic is bounded on the N. by the Caucasian Mountains, on the S. by Armenia, on the E. by the Republic of Azerbaijan, and on the W. by the Black Sea. It includes the important Black Sea ports of Batumi (pop. 50,000) and Poti (pop. 30,731). Other large towns are TIFLIS, the capital (pop. 1914, 356,000), Kutais (pop. 85,151), Sukhum (pop. 61,974), Tchiatur, the centre of the manganese industry, (pop. 25,675), Dusheti and Signagi. The Railway system of Georgia extends to 970 miles. The trunk line 556 miles long, connects the Black Sea ports of Pito and Batumi with Baku on the Caspian Sea. Batumi and Baku are also connected by a petroleum pipe line. The Republic is very rich in mineral resources such as manganese, iron, copper, silver-lead, petroleum, coal, etc. It has over 500 mineral springs, partly unexploited, among them many containing sulphur and radium. Its agricultural resources are also very considerable.

Georgia is a Democratic Republic. The executive power is entrusted to a Cabinet of Ministers, and the President of the Cabinet is acting temporarily as Supreme Head of the Republic.

President of the Republic, N. Jordania, born 1867. Elected by the Constituent Assembly March 12th, 1919.

Georgian Chargé d'Affaires (London) D. Gham-bashidze, 32 Queen's Gate, S.W. 7.

British High Commissioner at Tiflis, Commander Luke, D.S.O., R.N.

KUBAN.

In Nov. 1918, anti-Bolshevik elements in the basin of the Kuban river, N. of the Caucasus and E. of the Sea of Azov, proclaimed a government under M. Sazonov at Ekaterinodar. The area includes the river basin, the N. slopes of the Caucasus to Elbruz (on the E.), the river mouth, and the coast of the Sea of Azov, and extends over about 35,500 sq. miles, with a population estimated in 1914 at 3,000,000. Under normal conditions the Kuban soil not only supports the inhabitants, but enables about one-third of the produce to be exported. The aim of the government is reunion with Russia under a Democratic Federal Government. Capital, EKATERINODAR (pop. 1914, 120,000); other towns, Novorossiisk (pop. 1914, 70,000), Maikop (pop. 1914, 55,000), and Yeisk (pop. 1914, 53,000).

TARTAR BASHKIR.

The former Provinces of Samara, Ufa, and Orenburg declared their independence in 1918 as the *Tartar-Bashkir Republic*. Samara (capital,

Samara on the Volga, pop. 1914, 120,000) has a total area of 58,300 sq. miles and a population (1914) of 3,700,000; it lies to the E. of the Volga river and is largely agricultural, but includes iron-founding, tanning, brickmaking, and flour milling among its industries. Ufa (capital Ufa, at the confluence of the Ufa and Bielaia rivers, pop. 1914, 65,000) has an area of 47,109 sq. miles and a population (1914) of 3,000,000; it lies to the N.E. of Samara, and is largely agricultural and pastoral. Orenburg (capital, Orenburg on the Ural river, pop. 1914, 100,000), E. and S.E. of Ufa, is largely mountainous, but contains also fertile low-lying tracts in which agriculture is extensively carried on. Orenburg has considerable mineral wealth which is practically undeveloped.

TAURIDA.

In March 1918 the former government of Taurida declared its independence as the *Taurida Republic*. The area is 23,321 sq. miles, with a population (1914) of 2,000,000, and the Republic is bounded on the N. by the Dnieper river and the Province of Ekaterinoslav, on the W. and S. by the Black Sea, and on the E. by the Sea of Azov. The soil is very productive, especially in its southern peninsular, known as the *Crimea* (the ancient Tauric Chersonese). The capital is SIMFEROPOL (pop. 1914, 85,000), other towns being Sevastopol (pop. 1914, 62,000), Kertch (pop. 1914, 60,000), Theodosia (pop. 1914, 44,000), Berdiansk (pop. 1914, 41,000), Yalta (pop. 1914, 32,000), Eupatoria, Melitopol, and Perekop.

TEREK.

In Sept. 1918 the Ciscaucasian Province of Terek proclaimed its independence. The *Terek Republic* has an area of about 28,000 sq. miles, and includes a population of about 1,250,000. The S. neighbour is Georgia, the Kuban Republic lies to the W., and the E. boundary is the Caspian Sea. The N. boundary is indeterminate, but the Republic extends over the basin of the Terek river towards Astrakan.

TURKESTAN.

In Jan. 1918 the former Russian Provinces of Ferghana, Syr-Daria, Amu-Daria, Samarkand and Semirychensk, with a total area of about 420,000 sq. miles and a population of about 7,000,000, declared their independence as the *Republic of Turkestan*. The territories of this Republic extend from the Aral Sea in the W. to the boundaries of the Chinese Republic in the E., and between the River Chu and Lake Balkash on the N., and Khiva, Bokhara and Afghanistan on the S. The capital is TASHKENT (pop. 1914, 275,000), other large centres being Khokhand (pop. 1914, 125,000), Samarkand (pop. 1914, 100,000), Andijan (pop. 1914, 90,000), and Namangan (pop. 1914, 80,000).

UKRAINE.

On Nov. 21, 1917, the greater part of "Little Russia," consisting of the former governments of Chernigov, Kharkov, Kieff, and Poltava (with Ekaterinoslav and Kherson in "South Russia," and Podolia and Volhynia in "West Russia") was encouraged by Germany to declare itself independent as the *Republic of the Ukraine*. The new Republic was despoiled by Germany in 1917-18, and until August 1919 was overrun by Bolshevik forces, who were then driven from Odessa and the Ukraine by a rising of the inhabitants. The total area of the Republic

is about 174,000 sq. miles, with a population of about 30,000,000. The chief town and seat of government is KIEV (pop. 1914, 600,000), other large centres being Odessa, the great port on the Black Sea (with a population in 1914 of 650,000), Kharkov (pop. 1914, 260,000), Ekaterinoslav (pop. 1914, 180,000), and Zhitomir (pop. 1914, 80,000). The Ukraine is the great wheat growing district of Russia, and contains large deposits of iron ore and coal. Agriculture is the principal industry, and there are large iron and steel works. Before the War of 1914-8 the exports from the Ukraine (wheat, sugar, hides, bristles and wool) were of the annual value of about £75,000,000 and the imports (manufactured goods and machinery) about £50,000,000. In March 1919 the Allies recognised the provisional government of the Ukraine. In the autumn of 1919 the Republic broke off relations with the forces of Admiral Kolitchak and General Denikin and hostilities ensued, with varying fortunes, between the Ukrainian armies under General Wrangel and the "United Russian" armies of General Denikin. A "peace" was concluded in Nov. 1919, and in 1920 the struggle was continued with the armies of Soviet Russia, the trend of the struggle appearing to be entirely in favour of the "Red" Armies. During these military operations a government on Soviet principles was established in the Ukraine. In 1921 the Treaty of Riga (between Poland and Soviet Russia) recognized the independence of the Ukraine Republic.

Representative of the Ukraine Republic in London, Dr. T. Oleksniak.

YAKUTSK.

In May 1918 the vast East Siberian Province of Yakutsk broke away from the Republic of Siberia and established a *Republic of Yakutsk*. This sparsely populated area of 1,530,253 sq. miles contained in 1914 a population of less than 350,000, the chief industry being hunting and trapping in the forest regions and agriculture in the S. There is considerable mineral wealth. The capital is YAKUTSK on the Lena river, the centre of the Siberian fur trade (pop. 1914, 10,000).

SALVADOR, Republic of.

President (1919-1923), Señor Jorge Melendez, assumed office March 1, 1919.

Vice-President, Dr. Alfonso Quinonez Molina.

Interior and Public Works, Dr. Miguel Molina.

Foreign Affairs, Dr. Juan F. Paredes.

Finance,

War and Marine, Dr. Pio Romero Bosque.

Counsel-General in London (acting), G. Le Bourdonnec, 7, Union Court, Old Broad Street, E.C. 2.

The Republic of Salvador extends along the Pacific coast of Central America for 170 miles, with a general breadth of 43 miles, and contains an estimated area of 7,825 square miles, with a population estimated at 1,271,226. It is divided into 14 departments.

Salvador was conquered in 1826 by Pedro de Alvarado, and formed part of the Spanish viceroyalty of Guatemala until 1821. In 1840 the Republic broke away from the federation of Central American States. The constitution rests upon the fundamental law of 1824 (revised in 1886), the President and Vice-President being elected for four years by direct vote of the

people, the President being ineligible for a successive term in either office.

There are distinct areas in the low alluvial plains of the coast and the interior plateau, with a mean elevation of about 2,300 feet, broken in many places by volcanic cones, of which the highest are Santo Ana (8,300 feet) and San Miguel (7,120 feet). The lowlands are generally hot and unhealthy. There is a wet season (winter) from May to October, and a dry season (summer) from November to April. Earthquakes are frequent, and on June 8, 1917, a series of seven shocks nearly destroyed the capital, and ruined the towns of Santa Tecla, Armenia, and Apopa. The volcano on Mount Salvador was actually in eruption in Oct. 1917, and a severe earthquake was experienced on April 28, 1919, doing great damage to the capital.

The principal river is the Rio Lempa, which rises in Guatemala and flows into the Pacific, with tributaries in the Santa Ana, Asaguate, Sumpul and Torola, the Lempa being navigable for most of its course by small steamers. In the eastern districts the Rio San Miguel rises near the Honduras boundary and flows into the Bay of Fonseca. The western boundary crosses the Laguna de Guila, the greater part of which lies within the borders of Salvador, and in the centre of the Republic is the large volcanic lake Ilopango, with a smaller lake, Coatepeque, further west.

The chief industry is the cultivation of coffee; sugar is also grown and indigo, rice, &c., are important crops. The principal exports are coffee, indigo, tobacco, sugar, silver, balsam (known as balsam of Peru), rice, hides, cedar, and fustic. The chief imports are cotton goods (from the U.S.A. and U.K.), and leather, hardware, chemicals and motor cars.

A British railway nearly 100 miles in length connects Acajutla with the capital and Santo Ana, the coffee centre; and another line is in course of construction from the port of La Unión to the capital. This has been completed to San Vicente (112 miles), whence a motor service to San Salvador has been organised. The principal ports are Acajutla, La Libertad and La Unión.

There are 120 post-offices and 215 telegraph offices, with 3,000 miles of wire.

The language of the country is Spanish.

SAN DOMINGO. See Dominican Republic.

SAN MARINO.

A small Republic in the hills near Rimini, on the Adriatic, founded, it is stated, by a pious mason of Dalmatia in the 4th century, and governed by a Council of 60, of whom two are elected as Regents for six months (1 April and 1 October), being thereafter ineligible for office for three years. The area is 33 square miles, the population 12,036. There is an army of about 1,000. The city of San Marino (pop. 2,000) occupies the slope of Mount Titan, and has an impregnable castle, where King Berengar of Lombardy took refuge in 950 A.D., a fine church and Government palace, and a theatre. Agriculture and viticulture flourish.

British Consul-General for San Marino, M. Carmichael, O.B.E. (Leighorn).

Foreign Minister, H.R.H. Prince Dewawongse.

Envoy Extraordinary & Minister Plenipotentiary, in London, Phya Buri Navarasth, 23 Ashburn Place, S.W. 7.

Consul-General, Sir John Anderson, 5 Whittington Avenue, E.C. 3.

The Kingdom of Siam, or Muang Tai (area about 195,000 square miles; population, 1914, 8,150,000), is a buffer State between British Burma and French Indo-China, and its integrity is guaranteed by the British and French Governments by the Anglo-French Agreement of April, 1904. The upper part of Siam is mountainous, the lower flat. Siam contains many Chinese (largely engaged in trade and industry), besides Shans, Laos, Malays, Burmese, and Cambodians, and over 1,600 Europeans. The principal religion is Buddhism. Education is now under the Minister of Public Instruction. There are 304 public schools and 4,137 schools of all kinds, attended by 122,800 children. A University is in process of organisation. Bangkok is the only much-frequented port. Over two-thirds of Siamese sea-borne trade, which centres at Bangkok, is with the British Empire, and is largely in the hands of British firms or of Chinese trading from Singapore and Hong Kong. German shipping, which had held the lead in tonnage for many years past, has ceased to visit Bangkok since August, 1914, and, as a consequence, there has been a large increase in Norwegian and British shipping. The chief products of Siam are rice, teak, and tin (from Lower Siam). The area under rice is being much enlarged by irrigation. There is a large number of rice mills, mostly in or near Bangkok. The teak industry in the great forests of N. Siam is mainly in English hands. In 1918-19 rice constituted 81 per cent. and teak 3½ per cent. of the exports from the port of Bangkok; while hides and marine products are also exported in considerable quantities. Among imports are treasure, cotton goods and yarn, silk goods, provisions, gunny bags, kerosene, sugar, opium, metals and metal wares, machinery, &c. The general tariff rate is 3 per cent. *ad valorem*. Burma imports teak and cattle overland from Siam, and exports thither cotton and silk goods, &c. Except tin, wolfram, rubies and sapphires, there are no impor-

tant mineral products as yet. The King is an absolute monarch, and appoints his successor. There is an Executive Council of Ministers and a general adviser in Foreign affairs (usually of American nationality), and, since 1895, a Legislative Council of State, consisting of the Ministers, eight royal princes, and over twenty members appointed by the King, who has an absolute power of veto. A number of English, French, Italians, Danes, and Americans are employed in the various State departments. Siam has an army of nearly 50,000 men, and a few small gunboats; compulsory military service has been introduced. About 1,300 miles of railroads (mostly State-owned) are now open for traffic. Railways from Bangkok run to Korat (165 miles N.E.), Nakhon Lampang (400 miles N. of Bangkok), Petrii (40 miles E.); while the northern line is being extended to Chiangmai, and the southern line to Trang, on the west coast of the Malay Peninsula, was open to traffic in October, 1916. In July, 1918, the southern line was completed to the Kelah border where junction with the Federated Malay States Railway system was effected. There is through railway connexion between Bangkok and Penang and Singapore. Good roads are few. There are 3,000 miles of telegraph lines.

The currency is the silver tical, worth 1s. 6½d. at par (in 1921 about 2s. 1d.). The Mint was closed to the free coinage of silver in Nov., 1906. In N.W. Siam the Indian rupee is more or less current. The Government issues notes.

Señor Don****Emilio Gutierrez-Pallardo.****Consul-General, Excmo. Señor Don José Con-****costo, 40 Trinity Square, E.C. 3.****Vice-Cons., Señor Don Fernando Kobbe.****A Kingdom situate in the south-west of Europe,****between 35°-43° 45' N. lat. and 4° 25' E.—9° 20'****W. long., bounded on the south and east by the****Mediterranean, on the west by the Atlantic and****Portugal, and on the north by the Bay of Biscay****and France, from which it is separated by the****Pyrenees; and occupying the larger portion of the****great Iberian Peninsula. Its coast-line extends****1,317 mil. 8—7½ formed by the Mediterranean and****605 by the Atlantic—and it comprises a total****area of 106,700 English square miles, and an****estimated population, in Jan. 1914, of 20,350,000****—102½ to the square mile. The interior of the****peninsula consists of an elevated tableland****surrounded and traversed by mountain ranges****—the Pyrenees, the Cantabrian Mountains,****the Sierra Guadarrama, S. Morena, S. Nevada,****Montes de Toledo, &c. The principal rivers are****the Douro, the Tagus, the Guadiana, the Guadal-****quivir, the Ebro, and the Minho. The Constitu-****tion upon which the present Government is****formed is dated 30 June, 1876. The principal****towns are Madrid (pop., 655,796), Barcelona****(621,921), Valencia (244,594), Seville (164,244),****Malaga (140,957), Murcia (134,656), Saragossa****(126,525), Cartagena (108,542), Bilbao (100,204),****and San Sebastian (58,052); and there are 15 other****towns with over 50,000 inhabitants. Spain is rich****in iron, copper, and lead; its mineral resources****are only partially exploited, and principally by****foreign capital under foreign direction. The****country is generally fertile, and well adapted to****agriculture and the cultivation of heat-loving****fruits—as olives, oranges, lemons, almonds,****pomegranates, and dates. The agricultural pro-****ducts comprise wheat, barley, maize, oats, rice,****with hemp and flax of the best quality. The****vine is cultivated in every province; in the****south-west, Jerez, the well-known sherry and****tent wines are made; in the south-east, the****Malaga and Alicante. The principal articles****imported are raw cotton, spirits, fish, wheat and****flour, sugar, coal, timber, woollen manufactures,****machinery and railway materials, hides, &c.****The principal exports are wine, copper and****copper ores, lead, iron ores, olive oil, raisins,****oranges, cork, esparto grass, wool, salt, quick-****silver, grapes, &c. Trade was for many years****mostly confined to France and Great Britain, but****Germany had, before the war, become a serious****competitor, while the United States and Belgium****share an increasing proportion of Spanish trade.****Home manufacture is protected by high customs****duties.**

In 1920 there were 9,430 miles of railway open, and 69,400 miles of telegraph line. The sea-going mercantile marine on Jan. 1, 1919, consisted of 474 steamers and 448 sailing vessels over 50 tons, of a total tonnage of 766,298 tons. In 1919, 14,811 vessels of 9,520,196 tons entered and 15,358 vessels of 10,017,056 tons cleared at Spanish ports.

Defence.—The authorised peace establishment, including forces in North Africa, was, in 1920, 20,000 officers and 212,000 men. War strength: Field Army, first line, 300,000; second line, 450,000.

The Navy is being rebuilt and reorganised, and consists of 3 (15,700-ton) battleships and 3 modern cruisers, with 1 old battleship and 4 old cruisers; there are also 20 torpedo-boat destroyers, 24 torpedo-boats, 4 submarines, and 10 gunboats.

Education, Primary, is nominally compulsory and mainly free, and is State-aided, the public schools being maintained by local taxation. Many private schools are under clerical control, and supervision is lacking. **Secondary High Schools** are in each province, but the curriculum is defective. **Universities** at Barcelona, Granada, Madrid, Salamanca, Santiago, Saragossa, Seville, Valencia, and Valladolid.

The **BALNEARIO ISLES** are an archipelago of 15 islands in the Mediterranean, the largest being Majorca, Minorca, Iviza, and Formentera; the total area is 1,935 square miles, with a population (1910) of 325,763. The archipelago forms a province of Spain, the capital being Palma in Majorca.

CEUTA, which forms part of the Province of Cadiz, is a fortified port on the Moroccan coast, opposite Gibraltar. The total area is 9 miles, with a population of about 13,000.

The **CANARY ISLANDS** are an archipelago in the Atlantic, off the African coast, consisting of 7 islands and 6 uninhabited islets. The total area is 1,267 square miles, with a population of 419,800. The Canary Islands form a Province of Spain, the capital being Santa Cruz in the island of Tenerife.

SPANISH COLONIES.

The Spanish Colonies (exclusive of Ceuta and the Canary Islands, which form an integral part of the kingdom) consist of certain settlements and islands of Western Africa, with a total area of close on 82,400 square miles, and a population exceeding 275,000.

Fernando Po.

FERNANDO PO (*Fernando Pó*) lies in the Bight of Biafra in 3° 12' N. lat. and 8° 48' E. long., about 20 miles distant from the west coast of Africa, and is a mountainous island (Pico de Santa Isabel, 10,800 feet), with forests of oil palm, ebony, mahogany, and oak, and sugar-cane, cotton, and indigo. Cocoa, coffee, sugar, tobacco, vanilla, and kola nut are cultivated, and large quantities of cocoa and other products are exported. The capital is Basile, and the largest town Port Clarence (1,500 inhabitants). Dependents of the island of Fernando Po are—

Annobon Island (*Anno Bom*), in the Gulf of Guinea, in 1° 24' S. lat. and 50° 35' E. long. The roadstead at the capital (San Antonio de Baia) is much frequented by passing vessels, which also obtain water and vegetables from the islanders.

Corisco Islands, consisting of Corisco, Bana, Elobey Grando, and Elobey Chico, lie in Corisco Bay, and export ebony, logwood, and other forest produce.

Fernando Po—British Vice-Consul, A. C. Reeve (acting).

Rio de Oro and Rio Muni.

RIO DE ORO is a possession on the north-west coast of Africa, between Cape Bogador and Cape Blanco, or approximately between 21° 20'–26° N. lat., and extending eastwards to about 13° W. long. The territory is part of the waterless Sahara, with a sparse population of wandering Muhammadan Arabs. There are valuable fisheries off the coast, and cattle, sheep, and camels are bred where vegetation permits.

Rio Muni (or *Spanish Guinea*) is a coastal settlement of West Africa between Cameroon and French Congo (1° N.—2° 10' N. lat.), extending about 125 miles inland. The inhabitants are Bantu tribes, and the principal settlements are at the mouths of the Muni, Benito, and Campa rivers, and at Bata on the coast. Cocoa, coffee, and bananas are cultivated, and rubber, palm oil, palm kernels, and other forest produce are exported.

Spanish Morocco.

Spain exercises a protectorate over a part of Northern and of Southern Morocco (see p. 827) and on the Moroccan seaboard are certain Spanish *presidios*, formerly used as convict settlements.

Mejilla is a town on a rocky promontory of the Riff coast, connected with the mainland by a narrow isthmus. The population is 37,565, and the settlement exports goatkins, eggs, and beeswax, and imports cotton goods and provisions.

Alhucemas is a settlement on the bay of that name, and includes six islands.

Peñon de la Gomera (or *Peñon de Velez*) is a fortified rocky islet about 40 miles west of Alhucemas Bay.

The *Chafarinas* (or *Zafarinas*) are a group of three islands near the Algerian frontier, about 5 miles north of Cape del Agua; population about 1,000.

Ifni, on the Atlantic coast of Morocco, about 100 miles south of Agadir, affords access to the interior of south-west Morocco, but has no great trade at present.

SPITSBERGEN.*

The Spitsbergen ("Pointed Mountain" Archipelago) lies between $76^{\circ} 26' 30''$ $50'$ N. lat. and between $10^{\circ} 20' 32'$ $40'$ E. long., with an estimated area of 25,000 square miles. The archipelago consists of a main island, known as West Spitsbergen (12,000 sq. miles); North East Land, closely adjoining and separated by Hinlopen Strait; the Wiche Islands, separated from the main land by Olga Strait; Barents and Edge Islands, separated from the main land by Stort Fjord (or Wybe Jansz Water); Prince Charles Foreland, to the W.; Hope Island, to the S.E.; Bear Island (70 square miles) 127 miles to the S.; with many smaller islands in the neighbourhood of the main group.

The archipelago is generally mountainous and there are traces of extinct volcanic action. The highest points are Mount Newton (5,676 feet), Mount Polcaré (5,446 feet) in the N.E., and Hornumstind (4,600 feet) in the S., of the main island. The coast is deeply indented by fjords, of which the largest are King's Bay, Cross Bay, Ice Fjord, Bell Sound, Lowe Sound, and Horn Sound in the W., and Red Bay, Liefde Bay and Widje Bay in the N.; of these, Ice Fjord from the W. and Widje Bay from the N., the heads of which are only about 10 miles apart, give access to the centre of West Spitsbergen.

The principal minerals are coal, gypsum, oil and building stones. In 1917 the coal export was 40,000 tons, and in 1918 60,000 tons (mainly to Scandinavia); the 1919 output is estimated at 100,000 tons. The archipelago is visited by whalers (but the industry is declining), and by hunters for seal and wild fowl.

Certain districts in the main island (West Spitsbergen) have been named as follows:—King James Land and New Friesland (W. and E. of Widje Fjord) in the N.; Sabine Land, in the centre; and Torell Land in the S. There are settlements at Longyear "City" (on Ice Fjord); Davis "City" (on Lowe Sound); Green Harbour (at the S. entrance of Ice Fjord) with a high power Telefunken wireless station (erected by the Norwegian Government) connecting with Europe; and Coal Haven (in King's Bay).

South Cape is 370 miles from the Norwegian Coast. Ice Fjord is 520 miles from Tromsø, 650 miles from Murmansk, and 1,300 miles from Aberdeen. Transit from Tromsø to Green Harbour (the postal station) $2\frac{1}{2}$ to 3 days; from Aberdeen 5 to 6 days.

SWEDEN, Kingdom of.

King of Sweden of the Goths and the Wends, Gustaf V., born June 16, 1858; suc. December 8, 1907; mar., Sept. 20, 1881, Victoria, dau. of Grand Duke of Baden, born August 7, 1862 (and has issue 3 sons).

Heir Apparent, Gustaf Adolf, Duke of Skåne, Crown Prince, born Nov. 12, 1882; married June 13, 1905, H.R.H. the late Princess Margaret of Connaught (died May 1, 1920).

Swedish Church, Harcourt Street, Marylebone

Road, W. 1.

Sweden comprises the eastern half of the Scandinavian peninsula, and comprises the capital and 24 governments, "Län," with an area of 173,086 square miles, and a population, Dec. 31, 1920, of 5,903,762, nearly all Protestant. This area includes the great lakes of Hjälmar, Mälaren, Vänern, and Vättern. Nearly 49 per cent. of the population are devoted to agriculture, about 208,000 being owners and 50,000 tenants of the land they cultivate. The country for the most part is flat with pleasant undulations, rising in the north-west to the Kilen Mountains, which separate Sweden from Norway; and may be divided into three separate districts—the northern, forest; central, mining; the southern, agricultural. The climate in the south is favourable for producing grain. The principal articles of cultivation are the various cereals—oats, rye, barley, wheat—and potatoes. The forests are very extensive, covering one-half of the surface of the country, and consisting of pine, birch, fir; these are of great importance, supplying timber, pitch, and tar, and the chief fuel of the country, in addition to sulphite and mechanical wood pulp for the paper-making industry. The mineral products are extremely rich: iron of excellent quality, that known as the Dannemora iron being converted into the finest steel; gold and silver in small proportions; copper, lead, nickel, zinc, cobalt, alum, sulphur, porphyry, and marble. There is a railroad opening up the rich iron-ore districts of Lapland, and mineral trains run from Gällivare and Kiruna to Luleå on the Gulf of Bothnia and to Narvik on the Atlantic. Considerable mines of coal are being worked in Scania. The chief imports are coffee, wine, tobacco, and other ordinary colonial produce, coal, cloth, yarn, wool, cotton, skins, manure, iron, fish, oils, wheat, rye, pork, and machinery. The chief articles of export

* The spelling of the name with a "z" is a corruption of the true name.

are timber, butter, iron, steel, wood pulp, paper, matches, stone, iron and zinc ores, &c. In 1929 the exports of paper were 139,449 tons, and in 1920 the exports were about 200,000 tons.

Commercial travellers in Sweden are compelled to take out a licence, costing 100 crowns a month, or they incur the risk of being fined.

Railroads 9,468 miles in length (of which 3,437 are the property of the State) were open on Jan. 1, 1920; and 78,761 miles of telegraph wires (inclusive of 22,569 railroad telegraph wires), 122 stations, and 1,382 railroad and 1,299 other telegraph stations (1919). There were at the same date 404,677 miles of telephone wires.

Defence.—Service in the Army is universal and compulsory. The peace effective is about 90,000 trained men. The first line can be raised to war strength of about 110,000; second line, 85,000. The Navy consists of 75 fighting vessels (454 guns), 19 being ironclads, with submarines, submersibles, and some training ships, &c.

Education.—(i.) *Primary*: Compulsory and free. Illiteracy rare. Maintained by local taxation, with State grants. Attendance good. (ii.) *Secondary*: Well-developed, schools numerous and efficient. (iii.) *Special schools* make a feature of technical and navigation. (iv.) *Universities*: Lund, Upsala, and private faculties in Stockholm and Gothenburg.

The Helvetic of the Romans, a Federal Republic of Central Europe, situated between 45° 30'–47° 48' N. lat. and 5° 58'–10° 30' E. long. It is composed of 26 Cantons, of very dissimilar size, united under a Constitution dated 29 May, 1848, and comprises a total area of 25,950 square miles, with a population of 2,888,300 in 1920, who are divided between Roman Catholics, 40 per cent., and Protestants, 59 per cent., Jews numbering 7,400 and others 12,000. The population is formed by three nationalities, distinct by their language, as German 71 per cent., French 22 per cent., Italian 6 per cent., and Romansh (in the Grisons), 1½ per cent. The most important cities are Zurich, pop. (1920) 207,161, Bale 125,976, Geneva 125,092, Berne 104,565, and Lausanne 68,433. It is the most mountainous country in Europe, having the Alps, covered with perennial snow and glaciers, rising from 5,000 to 25,293 feet in height, not only along

* At present the President is elected for a term of 4 years, and is re-elected for a second term.

* The President is elected in December, and remains in office from 1 June to 31 Dec.; he is generally succeeded by the Vice-President.

its southern and eastern frontiers, but throughout the chief part of its interior; and the Jura mountains in the north-west. Agriculture is followed chiefly in the valleys, where wheat, oats, maize, barley, flax, hemp, and tobacco are produced, and nearly all English fruits and vegetables are grown. The forests cover about one-sixth of the whole surface. The manufactures consist chiefly of silks, cottons, linen, lace, thread, woollens, &c.; clocks and watches have long been the staple products of Geneva and Neuchâtel, while leather, gloves, pottery, tobacco and snuff, cheese, &c., are made. Being an inland country, the direct trade with the United Kingdom is comparatively small. In 1914 there were 3,530 miles of railway in working order, 17,333 miles of telegraph line, 317,403 miles of telephone line, and 2,099 post-offices; the profit on the railways in 1920 was 47,300,000 francs.

The legislative power is vested in a Parliament, consisting of two Chambers, a National Council of 120 members, and a Council of States of 44 members; both Chambers united are called the Federal Assembly, and the members of the National Council are elected for three years, an election taking place in October. The executive power is in the hands of a Federal Council of 7 members, elected by the Federal Assembly, presided over by the President of the Confederation. The President has a salary of 27,000 francs; the Vice-President and other members of the Federal Council 25,000 francs each. The members of the Federal Council are elected for three years; each year the Federal Assembly elects from this council the President and the Vice-President; they are elected for one year, the five other members for three years. Not more than one of the same canton may be elected member of the Federal Council.

Defence. *Militia.* Active Army, 12 yrs.; initial trg., 65-90 days. Subsequently 11 days per ann.; then Landwehr, 8 yrs.; 1 trg., 12 dys. for disarmed branches only; then Landsturm to age 48. *War Strength*, 240,600; Landwehr, 65,000; Landsturm, 57,000.

Education.—Control by cantonal and communal authorities. No central organ. Illiteracy rare in Protestant cantons. (i.) *Primary:* Free and nominally compulsory, but attendance is not strictly enforced in the essentially Roman Catholic cantons. School age varies. (ii.) *Secondary:* Age 12-15 for boys. Schools numerous and well-attended, and there are many private institutions. (iii.) *Special schools* make a feature of commercial and technical instruction. (iv.) *Universities:* Bâle, Berne, Fribourg, Geneva, Lausanne, Zurich, and Neuchâtel.

SYRIA, LEBANON AND CILICIA.

French High Commissioner, Général Gouraud.

Syria.—British forces, together with small French and Arab detachments, drove the Turks out of Syria and Lebanon in 1918, and occupied those districts and the district of Cilicia. By decision of the Supreme Council of the Allies the districts in question were entrusted to France, to be administered under a mandate.

The Emir Feisal (son of the King of the Hedjaz and, since 1921, King of Iraq) had from the outset assumed the administration of the districts of Aleppo, Hama and Homs, which had been assigned as Independent Arab districts under an earlier agreement of May, 1916, between France and Great Britain (the *Sykes-Picot Agreement*), and it was intended to allow the Emir to remain under French guidance, but on March 8, 1920, the "Syrian Congress" at Damascus declared Syria independent, and the Emir Feisal was crowned King of Syria. The action of the Syrian Congress did not receive the sanction of the Allied Powers, and General Gouraud occupied Damascus, Aleppo, Hama and Homs. The Emir Feisal left the country, and afterwards became King of Iraq (q.v.). The French Mandatory Zone has been divided into the four autonomous states of Great Lebanon, Damascus, Aleppo and the Alaouites (the region round Latakia), each having a French adviser responsible to the High Commissioner at Beyrout. The actual form of government differs in each of the states, but the guiding principle in each is real and effective French control.

Syria is a geographical term for part of the former Turkish territories in Asia Minor, and its Northern limits are still undefined, as Turkish Nationalist forces are in occupation of territory

N. of Aleppo ceded to the Allies under the *Treaty of Sévres*; the E. boundary separates Syria from Mesopotamia along a line running roughly N.E. from the E. side of Jebel Draz to a point 13 miles S.E. of Jezir Ibn Omar (80 miles E. of Mardin); the S. boundary follows a line from Ras el Nakoura on the coast, N. of Akko, and running S.E. by E. to the Hedjaz railway line S. of Nash, with a projection northwards to include the head waters of the Jordan, the Hule Lake and the Lake of Tiberias being included in Palestine. Within these limits, the estimated area is 100,000 sq. miles, with a population of about 3,000,000, of whom the greater number are Orthodox Muhammadans, with a proportion of Shiites and Druses. The products of Syria are wheat, tobacco, fruit, wine and silk, but there is little cultivation without irrigation, the inland districts being cut off from the moisture-laden winds by a mountain barrier, running parallel with the coast. The mineral wealth is believed to be unimportant, but there is a certain amount of bitumen. The principal Syrian towns are Damascus (est. pop. 300,000), Aleppo (250,000), Homs (70,000), and Hama (60,000). The administrative capital is at Beyrout (Grand Lebanon). Damascus contains the Mosque of the Omayyades (where is the tomb of Saladin), and in the south-western quarter is "The Gate of God," through which the pilgrimage to Mecca passes annually, while the "street called Straight" (Acts ix, 12) runs E. to W. through the city. Damascus is an important commercial centre, and among its industries are metal work and mother-of-pearl inlay. At Baalbek (Heliopolis), on the western slopes of the Anti-Lebanon range (35 miles N.N.W. of Damascus), are ruins of 1st to 3rd century Roman temples (the Circular Temple, the Great Temple and the Temple of Bacchus), and in the vicinity of the ruins is the largest cut stone in the world (60 x 17 x 24 feet), weighing 1,500 tons. The railway system consists of a line from Beyrout to Damascus (narrow gauge), with a connexion at Rayak for Homs, Hama and Aleppo (standard gauge). A line from Tripoli to Aleppo is being re-laid, and was expected to be open in 1921. A narrow-gauge tramway runs from Mameltein along the coast. From Damascus there is railway communication with Palestine, *via* Deraa, and the Syrian railways link up with the Baghdad railway at Aleppo.

The administrative Capital of Syria is Beyrout. The *Great Lebanon* (the former Turkish provinces of Lebanon and Beirut), declared a State by the High Commissioner, under the title of *Etat du Grand Liban*, in 1920, extends along the Mediterranean littoral from the Palestine frontier to Nahr el Kebir (15 miles N. of Tripoli) and is bounded on E. by the Great Central Depression, known as the Bekaa, in which flow the rivers Orontes and Litani. Its total length is about 200 miles, and its width varies from 30 to 35 miles. The estimated area of the Great Lebanon is about 4,300 square miles, with an estimated population of 800,000. The products of the soil are olives, wheat, grapes, oranges and mulberry-trees; the live stock are numerous and one of the principal sources of wealth. The Capital is Beyrout (pop. 160,000), which is the chief seaport and also the administrative capital of Syria. Tripoli is the next important town, and as a seaport may rival Beyrout on the completion of the railway to Homs. Minor ports are Junieh, Tyre and Sidon. The national flag is the French

tricolour with a Cedar of Lebanon on the white band.

Governor of the Great Lebanon, Capitaine de Frégate Trabaud.

Beyrout—British Consul-General, H. E. Satow, O.B.E.

Vice-Cons., Lt.-Col. G. Mackereth, M.C.

Aleppo—Consul, J. Morgan.

Pro-Consul, A. Akras.

Damascus—Consul, C. E. S. Palmer, D.S.O.

Cilicia extends round the Gulf of Alexandretta, from Lebanon in the south to the Anti Taurus in the north, and from the Seihun Irmak river in the west to Urfa in the east, the total area (which includes part only of the ancient Roman province of Cilicia, or of the Turkish vilayet of Adana) being about 12,000 square miles with a population estimated at 300,000. The country is generally fertile and produces wheat, cotton, wool, sesame, &c., and is capable of considerable agricultural development. The principal towns are Adana (45,000), the former capital of the Turkish vilayet of that name, Marash (50,000), and Alexandretta or Iskanderun (10,000), the chief port and an important strategical centre, with command of the Beilan Pass. The ultimate fate of Cilicia is still undecided, but certain parts of it are still under French military occupation, pending a settlement of the general Turkish question.

TURKEY.

(The Ottoman Empire.)

Sultan, Muhammad VI. (Wahid Ed-din), b. Jan. 12, 1861; succeeded his brother, July 3, 1918.

Heir Presumptive, Abdul Medjid Effendi, born June 27, 1869.

CABINET, Oct. 10, 1921.

Commerce & Agriculture, Sela Bey.

Delegate to the Peace Conference, Mustafa Roshid

Pasha, 169, Portland Place, W. 1.

1st Secretary, Cheik Bey Murtzadé.

The Ottoman Turks are derived from Central Asian tribes, who were converted to the Muhammadan faith in the seventh century. These Muhammadan tribes attacked and conquered the Asiatic Provinces of the Byzantine (or Eastern Roman) Empire, and by the middle of the fourteenth century they had spread from Asia Minor into South East Europe. In 1453 they captured Constantinople, and spread over the whole of the Balkan Peninsula, their name of Osmanli, or Ottoman Turks, being derived from Othman, or Osman (1299-1326), a notable Turkish leader in the fourteenth century. Early in the sixteenth century the Ottoman Empire was spread over Egypt and northern Africa, and penetrated northward into Hungary, a great part of which was incorporated with the Turkish dominions until 1699, when the *Pactos of Carlowitz* freed the country from Turkish rule. In the nineteenth century the outlying African

dominions, with the exception of Tripoli, broke away from their suzerain, or were occupied by other Powers, and in the latter part of the century the northern states of the Balkan Peninsula asserted their independence, under guarantees of the Christian Powers. The outcome of these political upheavals was a demand for better government in the remaining dominions of the Sultan. During the process of constitutional reforms, which drove the Sultan Abdul Hamid (1876-1908) from the throne, war broke out between Italy and Turkey, and Tripoli and Benghazi were ceded to Italy under the *Treaty of Lausanne* (Oct. 12, 1912). These events were followed in the autumn of 1912 and the early months of 1913 by a disastrous war with the states of the Balkan League (Bulgaria, Montenegro, Serbia and Greece). At the outbreak of hostilities the European dominions of Turkey extended westwards to the Adriatic and northwards to Bosnia-Herzegovina (Austria), thus including the districts known as Macedonia, Thrace, and Albania. By the *Treaty of London* (1913), the north-western boundary of European Turkey was a line drawn from Enos, on the Adriatic coast, to Midia, on the Black Sea, thus excluding Adrianople, which had capitulated (after a long siege) to the Bulgarian forces. At the outbreak of the second Balkan war (in which Serbia and Greece were aided against Bulgaria by Rumania), Turkey took advantage of the military difficulties of Bulgaria and re-occupied Adrianople, thus recovering a part of the lost dominions. In the war of 1914-1918, Turkey threw in her lot with the Central Powers and made unsuccessful attacks on Egypt and South Russia. Great Britain sent expeditions to Gallipoli (which were withdrawn) and to Mesopotamia and Palestine, which freed those countries and Syria from Turkish rule, while various tribal revolts in Arabia ended the Turkish suzerainty in that peninsula. On Oct. 30, 1918, Turkey surrendered unconditionally before the conquests of the various Anglo-Indian and Imperial British columns and their Arabian allies.

Under the *Treaty of Sevres* (1920) the boundaries of Turkey are set out and the Ottoman Empire now consists of:—

Turkey in Europe (1,500 sq. miles) consisting of the city and district of Constantinople, including Lake Derkes (the reservoir for the water supply of the city) with a population of about 1,300,000. European Turkey is separated from Asia by the Bosphorus at Constantinople and by the *Dardanelles* (Hellespont)—about 40 miles in length, with a width varying from 1 to 4 miles—the only political neighbour being Greece, on the west. The custody of the Dardanelles (the gateway to the Black Sea) and the navigation of the Straits, the Sea of Marmora and the Bosphorus, is placed under international control. The port of Constantinople (from St. Stefano to Dolma Bagtchi) in European Turkey, and of Haifa, Pasha, Smyrna, Alexandretta, Haifa, Basra, Trebizond and Batum, in Asia Minor, are declared to be of "international interest."

Turkey in Asia (140,000 sq. miles, estimated population 8,000,000) comprises the whole of Asia Minor (with exceptions afterwards noted) and extends from the Aegean Sea to about 41° 30' E. long. and from the Black Sea to the Mediterranean. This area corresponds approximately with *Anatolia* ("Land of the Rising Sun," or Orient) of the Greek historians, but part of the former vilayet of *Aidin* (Smyrna)

is assigned to Greece (subject to a plebiscite of the inhabitants within 5 years from 1920), while the vilayet of *Konia* (about 40,000 sq. miles) is similarly assigned to Italy, and part of *Cilicia* (Adana) to France. In addition, Turkish *Armenia* is declared to be autonomous, and *Kurdistan* is recognised as independent.

All other territories formerly subject to the Ottoman Empire are declared to be independent of Turkey. The *Aegean Islands* and the *Dodecanese* are transferred to Greece and Italy, *Cyprus*, *Egypt* and the *Sudan* are recognised as British Protectorates, while *Syria*, the *Great Lebanon*, *Mesopotamia*, *Palestine* and *Haifa*, and *Arabia* are acknowledged to be independent of Ottoman rule.

The Capital of the Ottoman Empire and the principal town of European Turkey is Constantinople (the Roman city of Byzantium, selected by Constantine the Great as the capital of the Roman Empire about A.D. 328 and renamed by him; became capital of the Eastern Roman Empire, A.D. 364); those of Asiatic Turkey are Scutari in Anatolia (80,000), Broussa (80,000), Kaisariya (70,000), and Sivas or Sebastia (65,000).

The present Sultan is in direct descent from Othman, the founder of the Empire, in whose line the succession is vested, the eldest male representative in the direct succession being the presumptive or apparent heir.

The Sultan is Caliph of the Muhammadan world, but the outcome of the War of 1914-18 has greatly restricted his title. The religion of the State is by law Muhammadan. Education is nominally compulsory and free. There are training schools, and at Constantinople a university, founded in 1900.

Although the soil of Turkish Asia Minor is generally fertile, agriculture is still very primitive. Cereals are abundantly produced, cotton, tobacco, and coffee are generally cultivated, figs, nuts, grapes, olives, and many varieties of fruit are grown. Cattle raising is an important industry. The exports were considerable before the War, and consisted principally of coffee, opium, tobacco, cotton, carpets, gums, and other of roses. The forests are a source of wealth, and the mulberry is planted for the silkworth industry. The mineral wealth of Asia Minor is considerable, but almost undeveloped. Chrome ore, zinc, manganese, antimony, copper, borax, corundum (emery), coal and lignite, petroleum, gold, and arsenic are among the minerals produced. The principal manufacture is carpet-weaving. Before the War the exports were valued at about £245,000,000 annually, and the imports at about £145,000,000 (£1:1 = £10).

About 40 miles of railway, under French supervision, remain to Turkey in Europe. In Asia Minor the Anatolian Railways run from Haidar Pasha to Eski Shehir, Afion Karahissar, Konia and Ereğli. Less important lines include the Eski Shehir-Angora, Mudania-Broussa, Smyrna-Cassaba, and Smyrna-Aidin systems. These railways have a total length of about 1,500 miles. There are electric trams in Constantinople and Smyrna.

Turkish Finances.—Attempts have been made since 1908 to establish a Parliamentary control over the finances, and budgets have been drawn up and adopted. Prior to the War, the chief sources of revenue were direct taxes, customs duties, and monopolies, and from these sources a revenue of about 30 to 35 millions (£1) was obtained. The expenditure (owing to the services

of the debt) is at least half as much again in recent budget estimates, the interest on the debt requiring almost the whole of the revenue. On account of political troubles in Asia Minor, and the disorganization of the financial administration, it is impossible to estimate in paper currency the revenue of Turkey within her new limits. According to the accounts of the last pre-war financial year, 1329 (A.D. 1913-14) the total revenue of Turkey amounted to gold £28,900,000.

The General Debt of the Ottoman Empire amounted on March 1, 1915, to *£170,048,107. New loans, advances, &c., issued during the war increased the total to £1488,115,647 on March 1, 1921, exclusive of indemnities or reparations due to Allied subjects. These figures are subject to modifications, no accurate accounts being available under present conditions.

The smallest Republic in South America, on the east coast of the Rio de la Plata, situate in lat. 30°-35° S. and long. 53° 25'-57° 45' W., containing an area of 72,220 square miles, and a population on Jan. 1, 1918, of 1,407,247.

Uruguay resisted all attempted invasions of the Portuguese and Spaniards until the beginning of the 17th century, and 100 years later the Portuguese settlements were captured by the Spaniards. From 1726-1814 the country formed part of Spanish South America and underwent many vicissitudes during the Wars of Independence. In 1814 the armies of the Argentine Confederation captured the capital and annexed the province, and it was afterwards annexed by Portugal and became a province of Brazil. On Aug. 25, 1825, through the heroism of the 33 liberators (whose memory is perpetuated in the name of the province of *Treinta y Tres*), the country threw off the Brazilian yoke. This action led to war between Argentina and Brazil, which was settled by the mediation of the United Kingdom, Uruguay being declared an independent state in 1828. In 1830 a Republic was inaugurated, with a Constitution of Sept. 10, 1829. The President is elected by the legislature for a term of 4 years and is ineligible for a consecutive period of office. By an amendment to the Constitution (which came into force March 1, 1921) an administrative council was appointed to share the Executive power with the President.

The country consists mainly (and particularly in the south and west) of undulating grassy plains. The principal chains of hills are the Cuchilla del Haedo, which crosses the Brazilian boundary and extends southwards to the Cuchilla Grande of the south and east. In no case do the peaks exceed 2,000 feet. The principal river is the *Rio Negro* (with its tributary the Yi), flowing from north-east to south-west into the Rio de la Plata. The boundary river *Uruguay* is navigable from its estuary to Salto, about 200 miles north, and the Negro is also navigable for a considerable distance. Smaller rivers are the Cuareim, Yaguaron, Santa Lucia, Quequay, and the Cebollati. On the south-east coast are several lagoons, and the north-east boundary crosses (the Brazilian) Lake Mirim. The climate is extraordinarily healthy, with great uniformity of temperature, the summer heat being tempered by the breezes of the Atlantic and the geographical position causing a high thermometer in winter.

Wheat, barley, and maize are cultivated, but the export is at present prohibited. The wealth of the country is obtained from its pasturage, which supports large herds of horned cattle (9,000,000 in 1908) and sheep (28,000,000 in 1908), the wool of which is of excellent quality. Gold mines exist at Cuiapirú. The exports are

* Gold £T = 22s. at par.

entirely animal products, and include frozen and preserved meat, wool, hides, horn, hair, tallow, and jerked beef; the imports are principally machinery, textiles and clothing, food substances and beverages, coal, and bloodstock. The imports from the U.K. are numerous, the principal being woollen and cotton goods, hardware, and coals. There are 1,630 miles of railway open (1918), all in British hands, and 4,850 miles of telegraph, with 19,039 miles of telephone. There were 995 post-offices, dealing with 101,638,265 letters and packets. The language spoken is Spanish.

lat. and 12° 26' N. lat. and 59° 35'—73° 15' W. long. It consists of 20 States and a federal territories. The best authorities calculate the actual present area to be approximately 353,728 square miles. The census of 1920 gave the population as 2,421,952.

Venezuela lies on the north of the South American continent, and is bounded on the north by the Caribbean Sea, west by the Republic of Colombia, (with which Republic the boundary is in dispute), east by British Guiana, and south by Brazil. Included in the area of the Republic are over 70 islands off the coast, with a total area of about 14,650 square miles, the largest being Margarita, which is politically associated with Tortuga, Cubagua and Coche to form the newly constituted State of Nueva Esparta. Margarita has an area of about 400 square miles.

Venezuela was visited by Columbus in 1498, and in 1499 by Alonso de Ojeda and Amerigo Vespucci, the former naming the Gulf of Maracaibo Venezuela, or "Little Venice" (on account of the Indian pile-built settlements on the coast and shores of the lake), and the name was afterwards extended to the whole of the Orinoco basin. In 1550 the territory was formed into the captaincy-general of Caracas, and the country remained under Spanish rule until the revolt under Simon Bolivar, a native of Caracas, who defeated the Spanish forces in the battles of Lastoguanes (1813) and Carabobo (1821), and thus secured the independence of the country. Bolivar was an untiring hero in the cause of independence, and through his efforts (and those of his adjutant Sucre) Venezuela, Ecuador and Colombia (Upper Peru) achieved their freedom from Spain, while Peru was enabled to establish its independence in consequence of his victories. He died in 1830, at the age of 47, and his remains were re-interred at Caracas in 1842. Venezuela, formed part of the Federal Republic of Colombia from 1822-1830, since which time it has been independent. There have been many revolutions since 1846, particularly in 1849, 1858, 1889, 1891, 1900, and 1902. In 1859 President Monagas liberated the African slaves, and in 1864 President Falcon divided the country into States and formed them into a Federal Republic. The present constitution rests upon the fundamental law of June 13, 1919, under which the government is that of a Federal Republic of twenty autonomous States, a Federal District, and two Territories, with a President elected by the Federal Congress for seven years.

The Eastern Andes from the south-west cross the border and reach to the Caribbean Coast, where they are prolonged by the Maritime Andes of Venezuela to the Gulf of Paria on the north-east. The main range is known as the Sierra Nevada de Merida, and contains the highest peaks in the country in Picacho de la Sierra (15,440 feet) and Salado (13,878 feet), the maritime ranges containing the Silla de Caracas (8,531 feet). Near the Brazilian border the Sierras Parima and Pacaraima and on the eastern border the Sierras de Rinco and de Uaupame enclose the republic with parallel northward spurs, between which are valleys of the Orinoco tributaries. The Sierra Parima contains Yaparana (7,775 feet) and Duida (8,120 feet), and Para Carima contains Maraguan (8,228 feet) and Roraima (8,530 feet), the latter being on the Venezuela-Guiana boundary. The slopes of the mountains and foothills are covered

with dense forests, but the basin of the Orinoco is mainly *llanos*, or level stretches of open prairie, with occasional woods.

The principal river of Venezuela is the Orinoco, with innumerable affluents, the main river exceeding 1,500 miles in length from its rise in the north-western mountains of the republic to its outflow in the deltaic region of the north-east. The Orinoco is navigable for large steamers from its mouth for some 700 miles, and by smaller vessels as far as the Malpures Cataract, some 200 miles further up stream. Among the many tributaries of the main stream are the Ventuari, Caura and Caroni from the south, and the Apure (with its tributary the Portuguesa), Arauca, Meta, and Guaviare from the west, the Meta and Guaviare being principally Colombian rivers. The upper waters of the Orinoco are united with those of the Rio Negro (a Brazilian tributary of the Amazon) by a natural river or canal, known as the *Casiquiare*. The coastal regions of Venezuela are much indented and contain many lagoons and lakes, of which *Maracaibo*, with an area exceeding 7,000 square miles, is the largest lake in South America. Other lakes are Zulía (200 square miles), south-west of Maracaibo, and Valencia (216 square miles), about 1,400 feet above sea level in the Maritime Andes. The *llanos* also contain lakes and swamps caused by the river floods, but they are dry in the summer seasons.

The climate is tropical and except where modified by altitude or tempered by sea breezes is unhealthy, particularly in the coastal regions and in the neighbourhood of lowland streams and lagoons. The hot wet season lasts from April to October, the dry cooler season from November to March.

The principal imports are cotton prints and shirtings and cotton drill, mainly from the U.K., and hardware, principally from the U.S. The principal articles of export are coffee (81,552 metric tons in 1919); cacao (19,833 metric tons in 1919); goatskins, asphalt, sugar, hides, and balata. The U.S. is the principal customer.

Spanish is the language of the country.

	1919-20.
Revenue.....	£4,045,377
Expenditure.....	2,722,621
Debt (June 30).....	5,265,094
Total Imports.....	11,037,076
Total Exports.....	9,014,441
Imports from U.K.	2,661,827
Exports to U.K.	638,886

The exchange at par = 25'25 Bs. = £ sterling, but during 1919, 1920, and 1921 the national currency has been at a premium as compared with £ sterling of from 5 to 20 per cent., the rate in July, 1921, being 25 Bs = £.

CAPITAL, Caracas. Population (1920), 92,212; other principal towns are Maracaibo (46,706), Valencia (29,466) and Barquisimeto (23,943).

FLAG: Three horizontal bands, yellow, blue, red (with seven white stars on blue band).

YUGO-SLAVIA.

King of the Serbs, Croats, and Slovenes, Alexander, born, Dec. 17, 1888, acceded, Aug. 16, 1921.

Premier (Jan. 1, 1921) and Foreign Affairs, M. Pachitch.

Minister in London, Dr. M. Gavrilovic.

Legation, 195 Queen's Gate, S.W. 7.

1st Secretary, M. K. Fotic.

2nd Secretary, M. Slobodan Jovanovic.

3rd Secretaries, M. Stefanovic; M. V. Milanovic.

Attachés, M. M. B. Gavrilovic; M. V. Andjelkovic.

Military Attaché, Col. G. Ostojic, C.V.O.

The Kingdom of the Serbs, Croats, and Slovenes is an outcome of the War of 1914-1918, through the fusion of the Kingdoms of Serbia and Montenegro with the Yugo-Slav districts of Austria-Hungary. The area and population of the new kingdom are approximately as under:—

District	Sq. Miles.	Est. Pop.
Serbia	34,500	5,000,000
Montenegro	5,800	500,000
Croatia and Slavonia.....	16,418	2,700,000
Banat (part)	6,000	800,000
Bosnia	16,233	1,630,000
Herzegovina	3,527	270,000
Carniola (part)	2,500	350,000
Styria (part)	1,900	350,000

Total 86,878 11,600,000

The political neighbours are the Republic of Austria and Hungary on the north, Albania and Greece on the south, Bulgaria and N.W. Greece on the east, and, on the west, the "buffer state" of Fiume - Istria - Dalmatia and the Adriatic Sea. This "buffer-state" has been constituted by agreement with Italy, and in it Fiume (the former Austrian port) has a special status, and is administered by a committee of five members (two Italians, two Yugo-Slavs, and one citizen of Fiume). In Sept., 1919, an unofficial raiding party of Italians, under the leadership of Gabriele D'Annunzio, the soldier poet, seized the port and town of Fiume, but in 1921 the authorized government was set up.

In 1913 Serbia, as a member of the Balkan League (Bulgaria, Greece, Serbia, and Montenegro), waged a successful war against Turkey, and enlarged her boundaries; but in August, 1913, Serbia and Greece were attacked by Bulgaria, their former ally, owing to disputes concerning the division of the spoils. The second war collapsed in a few weeks through the threatened intervention of Rumania, and ended in the Treaty of Bucharest (Aug. 7, 1913), by which the whole of "Old Serbia" (the greater parts of the Turkish vilayets of Macedonia) were included within the Serbian boundaries. The assassination of the Austrian heir presumptive (June 28, 1914), brought about an invasion of Serbia by the forces of Austria-Hungary and

resulted in the War of 1914-1918, during which the whole country was overrun by the forces of Austria, Germany, and Bulgaria. On Aug. 28, 1918, the Serbian Parliament met at Corfu, but in Oct., 1918, the Serbian armies were again in occupation of Nish, and on Nov. 3, 1918, the capital was re-occupied.

Serbia has no seaport, but access to the Adriatic is guaranteed by the *Treaty of London* (May 13, 1913), over any railways built through Albania under Serbian auspices. By a convention with Greece of May, 1914, similar access is obtained to the port of Salonika, on the Aegean; and by the *Treaty of Paris* (June 28, 1919) access is granted to Fiume and the Dalmatian ports. The bulk of the trade is with Austria. There were (1913) 980 miles of railway, and (1914) 2,800 miles of telegraph line, with 1,560 post-offices and 2,325 miles of telephone line.

The Army on a peace footing consists of 30,000 officers and men, the war strength being about 250,000.

The religion of the state is Greek-Orthodox. Primary education is free and nominally compulsory, but the attendance does not exceed 25 per cent. of the young. The State also maintains Secondary and Girls' High Schools. The University is at Belgrade.

The capital, Belgrade (*Beograd* = White Fortresses), at the confluence of the Save and Danube, is a modern city, with electric tramways and light, and wide streets; it contains the university, the national museum and library, and the old Turkish citadel. In 1914 Belgrade contained about 200,000 inhabitants. Other towns with their (1914) populations are Monastir (60,000), Prirend (42,000), Uskub (32,000), Nish (25,000), and Philip (24,000).

Montenegro was formerly a province of the old Serbian Empire which came to an end after the battle of Kosovo in 1389, since which date it has always claimed to be independent, and it was recognised to be so by the *Treaty of Berlin* (July 13, 1878). It has an area of 5,800 square miles (including the territory acquired from Turkey in 1913) and a population estimated at 500,000. On Nov. 29, 1918, the National Skupshchina deposed King Nicholas (who had reigned since Aug. 28, 1860), and a decision was made to reunite Montenegro with Serbia. King Nicholas died on March 21, 1921, and the union

of the country with Yugo-Slavia is now an accomplished fact. The capital is Cetinje (pop. 5,000) and the ports are Antivari and Dulcigno.

Croatia, Slavonia, &c.—On Oct. 30, 1918, at the dissolution of the Austro-Hungarian Kingdom, the National Assembly of the former Hungarian provinces of Croatia and Slavonia proclaimed the complete independence of those provinces, and a National Council was established, to which representatives of other Slav States (Bosnia, Herzegovina, and parts of Austria and Hungary) were admitted. On Dec. 29, 1918, a Ministry was formed for the Serb, Croat and Slovene Kingdom, in which representatives of Croatia and Slavonia were included.

Finances of Yugo-Slavia.—The budget of 1919-20 showed a deficit of 2,000,000,000 *dinars*, and the revenue of 1920-21 was estimated at 3,824,000,000 *dinars*, or 11,000,000 *dinars* less than the estimated expenditure. The *dinar* is exchanged at 4 Austrian *kronen* = 1 *dinar*. The value of the imports far exceeds that of the exports.

CAPITAL, Belgrade. Population, 1914, 100,000.
FLAG: Red, blue, white.

BRITISH LEGATION.

CIRCUMNAVIGATING THE AIR.

An organisation has been founded in New York, entitled the World's Board of Aeronautical Commissioners, with offices at 280, Madison Avenue, New York City, with Major Charles J. Glidden, F.R.G.S., late of the United States Army, as President. The project is to organise an "Aerial Derby" which shall circumnavigate the globe from London to New York, across the U.S.A. to Honolulu and Japan, and thence across Europe to London.

The sections San Francisco via New York to Yokohama have already been covered by aircraft, leaving only 6,237 miles, Yokohama to San Francisco, not yet conquered.

The World's Board has already enlisted the services of commissioners in Great Britain and nearly all the Dominions and Colonies, most of the European countries, the Central and South American Republics, and Japan. Altogether

the board now comprises ninety-eight commissioners in eighty-one countries. Cash prizes will be offered to aviators taking part in the flight, and for aeronautical contests and the advancement of the science in all parts of the world. The route proposed is:—

	Miles.
London to New York, via Drummary Head and Halifax, N.S.	3,435
San Francisco	2,750
Honolulu	3,375
Yokohama	3,262
Shanghai	1,266
Rome	8,266
Paris	882
London	211
Total	22,847

THE AGRICULTURAL ORGANISATION SOCIETY.

THIS Society, generally known by the name "The A.O.S.," is the central organisation and parliament of the agricultural co-operative movement in England. It was started twenty years ago, and has a record of much useful work done. It is not a trading body, and does not engage in commercial transactions or make profits. It gives advice and assistance in the formation of all classes of agricultural co-operative societies, whether for farmers, small holders, or allotment holders, and helps in the work of the furtherance of such societies. These societies are formed and worked for the benefit of their members, who, by making use of the facilities they offer, can obtain all the advantages accruing from combined action and co-operation in the purchase of agricultural requirements, the sale of produce, etc. The A.O.S. is controlled by the affiliated societies working through popularly elected local committees and a central board of government. The work the Society gets through in the course of the year is a proof of the need there is for such an organisation. It is a support for small and new societies to lean upon; without it doubtless there would be far less co-operation among agricultural workers, while the large and important societies are also closely allied with it. The chief aim of the A.O.S., when it was started in 1901, was for the purpose of advocating and promoting combination and co-operation among agriculturists in England and Wales for business purposes on business lines.

ARMAMENTS.

AMONG the questions which have occupied the minds of the peoples of the world during the past year probably none has assumed such importance as that concerned with the limitation of armaments. The efforts of the League of Nations up to the present have produced nothing more than expressions of opinion on certain aspects of the armaments problem; but a momentous move, which it is hoped will lead successfully to the desired end, was made by the President of the United States in July last, in inviting the United Kingdom, France, Italy and Japan to participate in a conference at Washington for the purpose of discussing the limitation of armaments and Pacific problems. The President's message, setting his proposal before the world, was as follows:—"The President, in view of the far-reaching importance of the question of limitation of armaments, has approached with informal but definite inquiries the group of powers heretofore known as the Principal Allied and Associated Powers—that is, Great Britain, France, Italy and Japan—to ascertain whether it would be agreeable to them to take part in a conference on this subject to be held in Washington at a time to be mutually agreed upon. If the proposal is found to be acceptable, formal invitations for such a conference will be issued. It is manifest that the question of limitation of armaments has a close relation to Pacific and Far Eastern problems, and the President has suggested that the Powers especially interested in these problems should undertake, in connexion with this conference, the consideration of all matters bearing upon their solution, with a view to reaching a common understanding with respect to principles and policies in the Far East." This has

been communicated to the Powers concerned, and China has also been invited to take part in the discussion relating to Far Eastern problems." The President's suggestions met with a cordial response from the Powers concerned. The Conference was inaugurated at Washington on Nov. 22 by President Harding. Mr. Hughes, Secretary of State, was elected permanent chairman, and he presented a series of proposals for the limitation of armaments, the immediate scrapping of nearly 1,900,000 tons of warships and a ten years' "Naval Holiday." Under this scheme the capital ships of Great Britain would be reduced to 22 of 604,450 tons; of the United States to 28 of 500,650 tons; and of Japan to 20 of 299,700 tons; while the cruisers, destroyers, and other auxiliary craft would be limited to 450,000 tons for Great Britain, 450,000 tons for the United States and 270,000 for Japan; with a submarine tonnage of 90,000 each for Great Britain and the United States and 40,000 for Japan.

At the time of going to press these proposals were being considered by the Governments of the countries concerned. The reception accorded to them by press and public appeared to be universally favourable.

THE BRITISH RED CROSS SOCIETY.

THE British Red Cross, founded in 1905, was the fusion of two bodies, e.g., Central British Red Cross Council and the British National Society for Aid to the Sick and Wounded in War. The Charter has now been extended to include peace activities, such as "the improvement of health, the prevention of disease," also to furnish a medium for co-ordinating relief work in case of great national or international calamities. In addition to the above work it will still continue to organise voluntary aid detachments, and encourage people to train themselves to render help to sick and wounded soldiers and sailors. The membership is now divided into two classes: those who belong to Voluntary Aid Detachments and those who wish to undertake other forms of Red Cross work. A special effort is to be made to enlist the services of the youth of the country in the Peace work of the Society, and it is prepared to offer special training in first aid to juvenile members under 17 years of age, in graduated courses, so that when they are 17 they can more readily qualify for the Society's certificates. The motor ambulances for conveying patients in the country from their homes to the hospitals have done much useful work. The "country organisation" is proving most helpful. Amongst other activities grants of blankets, sheets, and other sick-room necessities are issued to district nurses. There is a county depot where all stores are kept in each county organisation.

BUILDING GUILDS.

FURTHER developments of Guild working in the building industry (see p. 806 of the 1921 "WHITAKER") have taken place during the past year, and it is claimed by supporters of the system that the Building Guild may henceforth be regarded as an established institution. The new principle of the "maximum sum contract" has been adopted, under which a maximum price, including all overhead expenses, plus a small percentage for insurance against losses, is quoted for each job. Any excess is

borne by the Guild, but if the work costs less than the estimate the client shares the saving effected, as the Guild strictly adheres to the principle that the price charged must always bear a definite relation to the prime cost of the work. This new method of charging has been proposed as an advantage to the man of limited means who, under the old system, did not know in advance the extent of his liability. It was stated at the National Conference of Building Guild Committees that the value of the work completed by them was £300,000.

A scheme for the reconstitution and amalgamation of the Manchester Building Guild, Ltd. and the Guild of Builders (London), Ltd. to form a National Guild, Ltd. was approved at the Conference. The scheme provided for the establishment of a "national board" as the "supreme governing authority," to be elected by "regional councils," who in their turn are to be chosen from "local guild committees." The local committees, as formerly, are to be based on the local trade unions with representation of the technical and administrative organisations. Contracts up to £1,000 may be made by the local committees and up to £3,000 by the regional committees. For contracts above the latter sum the sanction of the national board is necessary.

CANALS.

IMPORTANT suggestions for the reorganisation of the canal and river system of the country are contained in the recently-issued Report of the Committee on Inland Waterways. Nationalisation of the whole canal system is put aside by the Committee as involving greater liabilities than the nation is prepared to face; but it is proposed that the various waterways shall be amalgamated into groups, each centring round some important traffic route, and shall be owned and administered by Public Trusts, limited as to dividends and financed partly by the State and the Local Authorities concerned. The Committee contemplate that these trusts should be composed of representatives of the Ministry of Transport, the local authorities in the area covered by each group, users of the waterway, Chambers of Commerce and the stock-holders. The stock-holders would comprise the original owners, who would receive trust stock for their interests and also subscribers to the capital of the Trust. It is proposed that the Trusts should have power to act as carriers, as well as toll-takers from bye-traders. The groups of waterways suggested by the Committee are:—

- (1) The River Trent and its connexions.
- (2) The Yorkshire Canals.
- (3) The Lancashire Canals.
- (4) The Canals joining Liverpool with the Midlands.
- (5) The River Severn with its connexions.
- (6) The River Thames and its connexions with the Midlands and Bristol.
- (7) The Birmingham Canal and its connexions in the Midlands.

The ultimate fusion of all the waterway connections in each of these groups into a single ownership is contemplated; but at present it is proposed to proceed by steps and only to set up Trusts to deal with those groups which offer the best prospects of a return with a minimum of expenditure. In the opinion of the Committee the River Trent with its connections offers

unique advantages in this respect, and they urge that the formation of a Trent Trust should be proceeded with at the earliest possible moment.

THE 1921 CENSUS.

WAR AND POPULATION.

LARGELY owing to the War, the numerical expansion of the nation, revealed by the census decade after decade of the past century, was appreciably less pronounced during the decennial period which ended last June, when the people of Great Britain (though not of Ireland) were numbered. While the population increased by nearly two millions in the ten years, the rate of increase was the lowest recorded in any inter-censal period. Even this result was less serious than was shown by the census taken in France where the war caused an actual shrinkage of over two millions.

In Great Britain the population on June 29—the date of the enumeration was later in the year than usual owing to the stoppage of work in the mines—was 42,767,530, or 1,936,134 more than in 1911. This increase was at the rate of only 4.7 per cent., as compared with 20.4 per cent. for the preceding period, which had been lower than the rate in any previous decade. Taking the three divisions, England's population was 35,698,530, against 34,045,990 in 1911, an increase of 4.8 per cent.; that of Wales was 2,206,712, against 2,005,202, an advance of 9 per cent.; and that of Scotland was 4,862,288 against 4,760,904, an increase of 2.5 per cent.

Not only was the War responsible for the loss of 628,000 lives on active service; the growth of the population was materially checked during the fifty odd months of fighting by a decline of the birth rate. From 1911 to 1914 the balance of births over deaths was comparable with the figures of earlier years, but subsequently the fall in the birth rate was much heavier than anything previously experienced, the numbers being from 20 to 25 per cent. below what might have been expected in normal circumstances. Upon the cessation of hostilities in the principal theatres of war in the closing months of 1918, very large increases in the birth rate were recorded, though they were not sufficient to compensate for the deficiencies for the years of fighting.

THE SURPLUS OF WOMEN.

Another direct legacy of the War disclosed by the census was the increased preponderance of females over males. For some years it had been a well-known fact that women in the United Kingdom outnumbered men, but last year's enumeration showed an appreciable growth in the surplus. There were in Great Britain 1,093 females to every 1,000 males, the largest excess recorded since the population was first counted in the opening year of the 19th century. Taking England alone, there were 1,101 females to each 1,000 males.

The total number of women and girls was 22,336,907, compared with 20,420,623 men and boys, a difference of 1,906,284. In the southern half of the Kingdom the figures were 19,803,022 and 18,022,220 respectively, the excess of 1,780,802 comparing with one of 1,199,276 ten years earlier, when there were in England and Wales 1,066 females to every 1,000 males instead of 1,093, last year's proportion. In Scotland the females

totalled 2,573,885, against 2,348,403, an excess of 225,482; the increase in males during the intercensal period being 1·7 per cent., and that in females 3·3 per cent., while the excess of females over males was 42,256 more than in the previous census, and greater than the ascertained excess in all preceding censuses. In no intercensal period had the excess of females over males increased by so large a number in any section of Great Britain.

As has always been the case the sex distribution differed greatly in the sub-divisions of the country. In Sussex, for instance, there were 1,272 females to every 1,000 males, though it is possible that this was partly the effect of the holidays. In Surrey there were 1,187 females to every 1,000 males, in Cardigan there were 1,185, and in Carnarvon there were 1,181; while in Durham the sexes were almost equal with 998 females to every 1,000 males. The men were in the majority also in Brecknock (947 females to the 1,000), Glamorgan (964) and Monmouth (969).

THE OVERSEA DOMINIONS.

The disparity in the sexes in Great Britain inevitably led to the suggestion that emigration within the Empire would remedy this state of affairs. But an examination of the situation shows that the capacity of the larger Dominions for absorbing the surplus women of the Mother Country is limited, and that generally speaking the females in outlying portions of the Empire have increased in number more rapidly than the males. In the smaller Colonies and those which are at present only commencing to develop, there might be a larger field, but for the average woman life would be too hard in these areas to make emigration advisable.

In Australia and New Zealand particularly, the women have been rapidly overhauling the men. In the Commonwealth a reduction in the deficiency of females of 43 in every thousand males was recorded in the ten years between the two countries—from 906 females to 1,000 males in 1911 to 956 to 1,000 last year. The proportion grew even more speedily in New Zealand, where last year there was only a shortage of 44 women and girls in every thousand men and boys, the total excess of males being less than half the number registered in 1911. Throughout Australasia, moreover, there is now actually an excess of females over males in the areas that are comparatively well populated.

In the Union of South Africa the excess of males fell appreciably, being about half the surplus shown ten years earlier; while estimates of the population of Canada indicate that only in the sparsely-peopled provinces are the males in excess of the females, and this to a smaller extent than was formerly the case. The larger Overseas Dominions—and the smaller Colonies as well—suffered from the War equally with the Mother Country, but apart from this there has for some years been a steady reduction in the surplus of males.

COST OF LIVING.

GREAT attention continues to be focussed on the Cost of Living question and the statistics published monthly by the Ministry of Labour. Agreements between organisations of employers and workpeople providing for the regular and automatic adjustment of wage rates in accordance with the variation in the cost of living were officially estimated in August last to cover

about 2½ million employees, and in all cases but three, so far as was known, the cost of living was measured by the Ministry of Labour figures. Criticism of these figures was contained in the report of the representative Labour Committee appointed to investigate questions connected with the cost of living. It was contended by this Committee that the official figures understated the increase in costs, but the Ministry of Labour disagreed with the contentions put forward and adhered to their published figures.

The official figures are designed to measure the average increase in the cost of maintaining unchanged the pre-war standard of living of the working classes, irrespective of whether or not such standard was adequate. The items covered by the statistics include (1) Food. (2) Rent and rates. (3) Clothing. (4) Fuel and light. (5) Miscellaneous (soap and soda; domestic ironmongery; brushware and pottery; tobacco and cigarettes; fares; newspapers). The average percentage increase, compared with July, 1914, for these items at the beginning of each month from January, 1915, is shown in the following table:—

Month.	1915	1916	1917	1918	1919	1920	1921.
Jan. ...	15	35	65	90	120	125	165
Feb. ...	15	35	70	90	120	130	155
March ...	20	40	70	90	115	130	141
April ...	20	40	75	95	110	132	133
May ...	20	45	75	100	105	141	128

HOUSING.

THE decision of the Government to effect a drastic curtailment of their housing scheme was announced by the Minister of Health in July last. The number of houses to be erected with Government financial assistance by local authorities and public utility societies in England and Wales is to be limited to 176,000, that being the number already built, building, or for which tenders had been approved. The Secretary for Scotland stated that financial assistance by the Government will be limited to a total of 24,500 houses in Scotland. No further subsidies to private builders are now being granted. For the improvement of slum areas the Government will provide an annual contribution not exceeding £500,000 towards the deficiency on local authorities' accounts in England and Wales, and Scottish authorities will receive an equivalent of any sum voted by Parliament for England and Wales. The Minister of Health expressed the opinion that by July, 1922, the considerations upon which Government action should be based might be fundamentally altered, owing to changes in the condition of industry, especially if prices become stabilised.

No solution of the housing problem is therefore yet in sight, and in the interests of public health a very much greater number of houses than those at present in hand are necessary. The Departmental Committee on the high cost of building working-class dwellings in their report, published in August last, stated that great numbers of houses "will need to be provided at a sufficient rate under some satisfactory

policy of finance, aiming at their provision as soon as possible on an economic basis by ordinary means." In the interim the Committee stated that a great responsibility rests upon the Government for securing the provision of essential houses by such methods as will reduce the financial assistance by the State and local authority to a minimum.

THE IMPERIAL CONFERENCE.

FOR a period of three months of last year the Empire had charge of Downing Street, as Mr. Lloyd George pointed out in welcoming the delegates to the Imperial Conference, which discussed a number of vital problems, and reached several important decisions. Canada, Australia, New Zealand and South Africa were each represented by their respective Prime Ministers, while on behalf of India the Secretary of State and others took part in the deliberations. There were 34 plenary meetings of the Conference, the Prime Ministers alone met on 11 occasions, and eight meetings of Committees were held. The delegates also attended meetings with members of the British Cabinet called to deal with Imperial and foreign questions of immediate urgency, such as the problem of Upper Silesia.

The greater part of the proceedings, particularly those relating to foreign affairs and defence, was of a highly confidential character comparable to the work of the Imperial War Cabinets of a few years earlier. With regard to the foreign policy of the Empire, the discussions revealed a unanimous opinion as to the main lines to be followed and a deep conviction that the whole weight of the Empire should be concentrated behind a united understanding and common action in foreign affairs. It was also unanimously felt that the policy of the Empire could not be adequately representative of democratic opinion throughout its peoples unless representatives of the Dominions and India were frequently associated with those of the United Kingdom in considering and determining the course to be pursued.

On the subject of Imperial defence the Conference expressed the opinion that the method and expense of co-operation among the various portions of the Empire to provide naval defence essential for security were matters for the final determination of the several Parliaments concerned, and deferred any recommendations until after the Washington Conference on Disarmament, which the Premiers warmly welcomed. Empire settlement and migration, the League of Nations, Empire communications, and repatriation from Germany were among the other subjects debated.

LABOUR QUESTIONS. COAL MINE STOPPAGE.

DURING the first nine months of 1921, approximately 60 labour disputes in the mining industry were reported to the Ministry of Labour, during which at least 75,000,000 working days were lost by the 1,150,000 workpeople involved. The main cause of the big figures was the stoppage that lasted for 60 days from April 1. Mines were decontrolled on March 31 instead of August 31; they were a charge upon the taxpayers. Owners and men met to decide upon the lower terms that would enable the mines to pay; the former offered district wages varying with the profits of

the mine areas; the latter wanted a national pool of profits, so that there would be standard wages irrespective of district. Miners' Federation of Great Britain ordered suspension of work, irrespective of occupation, and on April 1 complete stoppage took place. A state of National Emergency was declared by the Government. Triple Alliance ordered sympathetic strike of railwaymen, transport workers and dockers to take place on April 15, but it was cancelled because N.U.R. would not support the strike on a principle, though it would on a question of wages. The Government offered a subsidy of £10,000,000 to tide over difficult times, but offer was rejected, and after fresh conferences the ballot on June 15-16 of the miners showed a majority of 254,890 for continuation of struggle. After many trade union meetings, and much national distress in trades dependent upon coal, further conferences took place, June 24-27, between M.F.G.B. and mine owners that led to end of dispute upon the promise of the subsidy, that had been withdrawn by the Government, of £10,000,000. National and District Boards were to be established to determine the wages payable, which wages were to be determined upon "the proceeds of the industry" in the various districts.

CO-OPERATION AND LABOUR.

At the 13rd Annual Co-operative Congress at Scarborough, when 563 societies with 4,000,000 members were represented, a proposal for a political and co-operative alliance with the Labour Movement was defeated by 1,686 votes to 1,682. It is intended to raise the matter at the 1922 Congress, as the political Labour Movement wants to get control of the Co-operative Movement.

GENERAL FEDERATION OF TRADE UNIONS.

ANNUAL Conference at Bangor took place on July 14, with Mr. T. Mallalieu (Felt Hat Makers) in the chair. The membership of the Trade Unions belonging to the Federation totalled 1,500,000, being an increase for the year of 203,000. It was pointed out that two weeks' strike allowance exhausted in benefits the contributions for five years. Mr. Appleton is secretary. The policy of the G.F.T.U. is much less advanced than that of the T.U.C.

GROWTH OF TRADE UNIONISM.

A REMARKABLE increase in the membership of the Trade Unions dates from 1912, and notably since 1915. The first increase was due to the passing of the National Insurance Acts, whilst the second can be traced to war influences.

Year.	Membership.
1892.....	1,337,367
1897.....	1,623,026
1901.....	1,979,412
1909.....	2,369,067
1913.....	3,987,115
1915.....	4,398,000
1918.....	6,622,000
1919.....	8,051,003
1920.....	8,502,000
(of whom 1,363,000 were women).	

Officially it is stated that there are in
Belgium..... 876,631 trade unionists.
Germany..... 2,522,794

(of whom 1,362,746 are women).

INDEPENDENT LABOUR PARTY.

ANNUAL Conference of the I.L.P. took place at Southport, March 26. On the motion to affiliate with the Third International (Moscow) being defeated by 521 votes to 97, the minority, under leadership of Mr. C. H. Norman, decided to leave the Party. The minority were subsequently welcomed as members by Mr. McManus, Chairman of the Communist Party (attached to Third International). A proposed new programme was submitted by the National Administrative Council to the Conference, but it was referred back for further consideration. On Sept. 30, a revised "platform" for the I.L.P. was circulated for consideration before next Easter Conference. Basis of platform is the establishment of a Socialist Commonwealth in which the political democracy must be the whole body of citizens exercising authority through a National Representative Assembly directly elected by the people; the establishment of a decentralised and extended system of local government. Mr. R. Wallhead (Manchester) is Chairman, and Mr. Philip Snowden is Treasurer.

INTERNATIONAL FEDERATION OF TRADE UNIONS.

BODY met at Amsterdam March 31, under Chairmanship of M. Jouhaux, of the C.G.T. of France. The Federation, which represents, through delegate leaders, about 12,000,000 trade unionists, will not affiliate with the Third International (Moscow).

LABOUR PARTY.

TWENTY-FIRST Annual Conference was held at Brighton, June 21-24, when 1,000 delegates attended, representing 120 trade unions with a membership of 4,216,724; with the membership of societies the total affiliated membership is 4,257,994, but there may be a little duplication due to one person being a member of a society as well as a trade union. Resolutions were passed (Mr. A. G. Cameron in chair) denouncing any alliance with Conservatives or Liberals; condemning the Government's Irish policy; refusing affiliation application of Communist Party (attached to Third International of Moscow). Labour Party accepted proposals suggested by joint committee for common working with Trade Union Congress and Labour M.P.'s. A National General Council has been created with five representatives from L.P., T.U.C., and L.P. in House of Commons. This body of 15 will endeavour to lay down a common policy and direct the labour, educational and research movement.

LABOUR WOMEN.

NATIONAL Conference of Labour Women was held at Manchester, April 27-28, when 500 delegates attended under the chairmanship of Miss Margaret Bondfield. Resolutions were passed demanding improvement of women's working conditions and containing usual criticisms on Government policies.

N.U.R.

ANNUAL Conference of National Union of Railwaymen was held at Newcastle-upon-Tyne July 10. Mr. J. Marchbank, vice Mr. W. J. Abrahams, was elected President. In the valuation of the funds of the National Health Insurance section, it was shown that the membership had increased during the year by 7,036 to 91,000,

and a surplus of £106,261 existed. Sickness benefits were increased and free dental treatment adopted. The N.U.R. celebrated its Jubilee during 1921; the A.S.R.S., one of its component parts, was registered as a T.U. in 1871. Mr. J. H. Thomas was re-elected political secretary, as was Mr. Camp industrial secretary. The N.U.R. is quite distinct from the Locomotive Engineers and Firemen's Society (Secretary, Mr. Bromley), of which membership is restricted to workers on the footplate.

RED TRADE UNION INTERNATIONAL.

A CONFERENCE under this title was held in Friars Hall, Blackfriars Road, London, S.E., on May 7, with Mr. Tom Mann, late General Secretary Amalgamated Engineering Union, in the chair. It was stated that 300 delegates attended and supported the Third International. The resolutions carried included one for throwing over the present leaders of trade unions, and replacing them by Communists. The Communist, or Third International, met at Moscow on June 1.

SCOTTISH TRADE UNION CONGRESS.

TWENTY-FOURTH Congress was held at Aberdeen April 20-23. Support was given to the nationalisation proposals of the miners; suspension of the Increase of Rent Act proposed; reduction to 44-hour week for shop assistants carried; organisation of food and transport services in time of national strikes advocated, so that the workpeople shall be sure of their food. Next Congress will be at Inverness in April, 1922.

SOCIAL DEMOCRATIC PARTY.

THIS, the oldest of the British Socialist Parties, still survives, despite various secessions of the "more advanced" to other parties. The 35th Annual Conference was held at Stratford, London, July 31 to August 2. The Party refuses to affiliate with the Third International (Moscow). S.D.P. is represented in the House of Commons by Messrs. J. Jones and W. Thorne; the late Mr. H. M. Hyndman was its great protagonist since his death.

TRADE UNION AMALGAMATIONS.

POLICY of amalgamation of the trade unions in a trade or in allied trades proceeds apace. At the Conference of the Transport and General Workers' Union at Leamington on September 29 (Mr. H. Gosling, President), it was stated there was "every possibility that in the next twelve months all the big transport unions would join the ranks of this great amalgamated Society. The next step would be the alliance with the railwaymen, and when that was effected they would have reached a point when one card would represent trade unionism." Proposals were in existence in January for a Federation of Ship Constructional and Engineering Workers, to combine the carpenters and joiners, sheet metal workers, boilermakers, iron and steel ship-builders, and other kindred bodies. In March, the Shop Assistants Union at Conference, instructed negotiations for union amalgamation with Distributive Workers' Union. On the other hand, the National Sailors and Firemen's Union withdrew from the Triple Alliance, but this withdrawal was announced when the Triple Alliance had more or less dissolved, consequent upon internal disputes during coal stoppage.

TRADE DISPUTES.

BUT for the 90 days' coal stoppage, during which over 1,000,000 coal mining employees were directly unemployed, and at least twice as many in dependent industries thrown out of work, the year 1921 would have been a very moderate year for strikes. Practically every strike was due to the objection of the employees to proposed reductions in bonuses or wages. However, there was a general acceptance in the reduced remuneration consequent upon the fall in the cost of living. Longest strike was that of shipyard joiners (20,000), who refused reduction of 12s. weekly on January 2. Work was resumed on August 25, with a partial reduction immediately and remainder by instalments. Dispute meant much work going to Continental shipyards. Details of the disputes in force each month are as follows:—

	Disputes in Progress.	Workpeople involved (1,000).	Working days lost (1,000).
Jan.	93	27	408
Feb.	112	28	378
March ...	105	31	469
April 98	1,176	23,392	
May 125	1,152	23,155	
June 91	1,535	29,603	
July 94	1,127	6,327	
Aug. 105	26	213	
Sept. ... 100	20	146	

For the nine months, Jan.-Sept., giving net figures,

1921.....	549	1,689	84,192
Whole years for			
1919.....	1,413	2,586	34,903
1920.....	1,715	2,019	27,011

Taking a day's work to be represented by 10s., the loss in wages through trade disputes in the first nine months of 1921 works out at £24,100,000.

TRADE UNION CONGRESS.

FIFTY-THIRD Congress met at Cardiff, September 5-10. Owing to a reduction in membership in the general labour unions, the statistics of the T.U.C. were slightly below those of previous years. Details:—

	T.U.	Delegates.	Membership.
1920.....	195	955	6,494,707
1921.....	190	823	6,389,123

A demand for an enquiry into the policy of the Triple Alliance during the coal stoppage was shelved. A proposal for central control of labour disputes, instead of leaving matters in hands of actual disputants, as at present, was defeated. A scheme for the appointment of a permanent and paid whole-time service Chairman was defeated, but the scheme of arrangement for co-operative working with the Labour Party was adopted. (See Labour Party paragraph.) Mr. R. B. Walker, of the Agricultural Labourers, has succeeded Mr. E. L. Poulton, of the Boot and Shoe Operatives, as Chairman. Mr. C. W. Bowerman, M.P., remains Secretary.

WAGES.

A GENERAL maximum was reached at the end of December in wages. The continued increase in practically every industry of wages had gone on since the beginning of the war, the cause being the rise in the cost of living. Details for 1919 and 1920 are:—

Year.	Workpeople concerned.	Total increase per week.
1919.....	6,260,000	2,132,000
1920.....	7,600,000	24,495,000

During 1920, the official index figure for the cost of living rose from 136 to 128. Details for 1921 are:—

	Index Figure above that of Mth. Aug. 1, 1914.	Workpeople. Iner.—Decr. (In 1,000).	W'kly Incidence. Iner.—Decr.
Jan.	151	92	1,492
Feb.	141	688	1,580
March ...	133	701	1,689
April	128	18	1,147
May	119	235	1,335
June	119	13	1,060
July	122	4	3,619
Aug.	120	87	3,071
Sept. ...	110	363	1,677

Whether the decrease will continue at the same rate when the index figure reaches 100 above the 1914 level is questionable. A higher standard of living is now demanded.

LIQUOR CONTROL.

THE repeal of the war restrictions on the sale of intoxicating liquor and the abolition of the Central Control Board, which first came into being in 1915, followed the passing of the Licensing Act, 1921, the provisions of which were largely the result of a compromise between Members of Parliament interested in the Trade and others concerned with the temperance movement. The permitted hours during which intoxicating liquors may be sold in licensed premises are fixed generally throughout England and Wales at 8, with a normal closing hour of 10 P.M. In the metropolis a nine-hour day is fixed, with 11 P.M. as the closing hour, and the Licensing Justices for any district outside the metropolis, if satisfied that special requirements render it desirable, may make orders increasing the hours to 8½. A further extension of 1 hour at night is permitted to licensed premises which habitually provide meals; but during this hour any drinking bar on the premises must be closed and drink supplied only with the meal. The Act applies to clubs, but the hours of opening may be fixed in accordance with the club rules and not by the Justices. The prohibition of the on-sale of liquor on credit and the long pull is maintained, and the *bond fide* traveller's privileges are abolished. The properties vested in the Central Control Board in the Carlisle district and elsewhere are transferred to the Home Secretary and the Secretary for Scotland.

Among the chief features of the Bishop of Oxford's Bill, which was introduced in the House of Lords but failed to make any progress, were local option and the establishment of a Liquor Management Board, to whom the Central Control Board's properties would be transferred, and who would have the control and management of the sale of liquor in any area which passed a State purchase resolution. The Bill proposed that localities should be given the option of voting in 1925 for—(1) No change from the present conditions, or (2) State purchase, or (3) The withdrawal of retail licences.

LONDON GOVERNMENT.

IN view of the need for reform in the government of Greater London the Government decided in August last to appoint a Royal Commission "to enquire what, if any, alterations are needed in the local government of the Administrative County of London and the surrounding districts,

with a view to securing greater efficiency and economy in the administration of local government services, and to reducing any inequalities which may exist in the distribution of local burdens as between different parts of the whole area." The enquiry will probably be limited to Greater London, i.e. the area of the Metropolitan and City Police districts, 62.9 square miles. Some idea of the complexity of the problem may be gathered from the multiplicity of authorities at present carrying out local government services in that area. In the Administrative County of London (116.9 square miles) may be mentioned the City Corporation, the London County Council, the Metropolitan Water Board, the Metropolitan Asylums Board, the Port of London Authority, the Metropolitan and City Police, 28 Borough Councils, 28 Boards of Guardians, 26 Assessment Committees, the Old Age Pension Committee and its 13 local Sub-Committees. In Extra-London there are 5 County Councils, of which Middlesex only is wholly within Greater London, 3 County Borough Councils, 6 Municipal Borough Councils, 65 Urban District Councils, 13 Rural District Councils, 19 Boards of Guardians, 19 Assessment Committees, 47 Parish Councils, 38 Local Pensions Committees with 44 Sub-Committees.

The question of rating and assessment will be one of the most important matters to be dealt with by the Royal Commission, and it will probably be urged that there should be a uniform system of valuation for rating purposes for the whole of Greater London, and that the central authority should levy a uniform rate for all services which are not of purely local benefit. The desirability of equalising the cost of certain services which at present is met parochially is shown by the great disparity in the rates levied in different parishes. These varied in 1920-1 in London from 10s. 6d. in the £ in the City of London and 11s. 18d. (average) in the 11 parishes in Westminster to 22s. 10d. in Poplar and 23s. 4d. in the parish of St. George-in-the-East, the average for the Administrative County being 14s. 5d. In Extra-London there was even greater inequality, the rates levied varying from 17s. 6d. in the Ham district of Surrey to 24s. 7d. in the Cann Hall parish of the Leyton district, the average for Extra-London being 12s. 5d.

THE MOTHERS' DEFENCE LEAGUE.

THE Mothers' Defence League, is to defend the liberty of mothers, and to secure justice for working mothers. It aids at opposing measures which would introduce State control of the family, or unduly interfere with the rights of parents. It also aims at representing the views of working mothers in regard to social measures affecting them. The President is Mr. G. K. Chesterton. Among the Council is the name of the Rev. Father Bernard Vaughan, S.J. The work of the league has been very successful, and it has taken action in connection with several cases, including payment of mothers' and widows' pensions, appeals from the Mental Deficiency Act, maintenance from fathers for children, repair of insanitary dwellings, and several other instances.

In a deputation to the Ministry of Health, to obtain redress for various grievances suffered by working mothers from officialdom, a specific protest was made against the adoption by boards of guardians without the parents' consent, and a

demand that the parents be able to see their children in all cases, and be not obliged to wait until the children are 18 years of age.

The league is anxious to alter several important points in the way the anti-natal clinics are managed. At present the league thinks they encroach on the privacy of the home. The membership is rapidly increasing, and local branches have been formed in various parts of England and Scotland.

MOUNT EVEREST.

DURING the past year an expedition was organised by the Royal Geographical Society and the Alpine Club with the object of scaling Mount Everest, the highest mountain in the world. The present mountaineering record, 24,600 feet (4,402 feet lower than the summit of Mount Everest), was reached by the Duke of Abruzzi in 1909 on Mount Godwin-Austen. Hitherto no explorer had been nearer Everest than Major Noel, who in 1913 reached a point about 30 miles to the south-east of the mountain. The first task of the present expedition, therefore, was the examination of the approaches to the mountain, with a view to finding a possible route to the summit, and the consent of the Tibetan Government having been obtained, it was decided to explore the northern approaches first. The idea of using aeroplanes on the expedition was abandoned. Under the leadership of Colonel Howard Bury the expedition left Darjeeling about the middle of May last on a 300 mile march through Sikkim and Tibet to the north-western side of the mountain. After extensive exploration work it was found that there was no practicable means of ascent to the summit from the northern and western approaches, and the expedition moved its base to reconnoitre the eastern approaches. Here again there appeared to be no possible line of ascent, the mountain being guarded, as on the northern and western approaches, by gigantic precipices. At the time of going to press, however, it was still hoped that a means of ascent would be discovered. In connexion with the expedition a large amount of useful survey work over unknown country has been carried out by officers of the Indian Survey.

"THE QUEST."

SIR ERNEST SHACKLETON left London in September last on a long voyage of Antarctic exploration in his ship "The Quest," a Norwegian sealer of little more than 200 tons net, with a length of 121 feet, beam 23 feet, depth 12 feet. The expedition, which was made possible by the generosity of Mr. John Quiller Rowett, who has done much for agricultural and medical research, and by a donation from Mr. Frederick Becker, will cover some 30,000 miles through the Atlantic, Pacific and Antarctic Oceans, including a complete circuit of the South Polar continent. The route to the Antarctic will be via Salvages, South Trinidad, Tristan da Cunha and Gough Island, where investigations will be made with a view to ascertaining whether those islands are the key to underwater connexion between Africa and South America; then on to Cape Town, and from there south to Enderby Land on the Antarctic circle. Between here and the Weddell Sea is a huge area of which nothing is known, and the exploration of some 3,000 miles of land and water in this region will constitute the most

serious work of the expedition. On emerging from the Antarctic "The Quest" will visit South Georgia to refit, and will then proceed to New Zealand *via* Bouvet Island and Heard Island. After leaving New Zealand, search will be made for the "lost island" of Tuanaki, and a visit will be paid to Dougherty Island. The homeward journey will be made *via* Cape Horn. "The Quest" is equipped with the most modern apparatus and appliances to aid the explorers in all those branches of science in which it is intended to carry out investigations, and a specially constructed seaplane is expected to help considerably in the important work of exploring the Enderby quadrant. The ship is carrying no crew, but will be managed by the staff of the expedition.

RATES.

THE rates levied in the metropolitan boroughs are shown on p. 564; the following table shows the rates of the boroughs in Greater London (outside the County of London), and certain Cities in the years 1913-4, 1914-5, 1918-9, 1919-20 and 1920-1.

London and English Boroughs	1913-4.	1914-5	1918-9	1919-20.	1920-1
Average for London ...	7 7 ²	7 10 ⁹	8 7 ⁷	9 10 ⁷	14 5

(average) ...	9 3 ¹	9 5	10 0	12 5 ⁴	17 8

ROAD TRANSPORT.

THE volume of mechanical road transport has continued to increase greatly throughout the past year, and further extensive development may be looked for in the near future, both as regards the carriage of goods and passengers. For many classes of goods road transport is cheaper than rail-carriage, and probably entails less risk of damage and pilferage, and as the organisation of the newer companies improves the commercial motor will become a much more serious competitor with the railway. Passenger motor traffic has increased at an unprecedented

rate, and it has been estimated that over 10,000 motor coaches, or char-a-bancs, have been making regular runs during the past summer. The fares charged compare favourably with the third-class rail charges, and the advantages of a booked seat and travel in the open air have contributed to the popularity of the new mode of travel. In this branch of traffic there remains much room for improvement in organisation and control, and it is to be hoped that defects, which have sometimes been in evidence in certain departments of the business, will be speedily removed. So far the extent to which railway companies have engaged in road transport has been small, although road services were started by one company some eighteen years ago, and four other companies obtained powers between 1904 and 1906 by means of private legislation, but have not exercised them to any extent. A serious attempt was made to get a clause inserted in the Railways Bill, giving the companies as a whole powers to run road transport services; but the Speaker ruled that the Bill was not one which conferred new powers on the companies, and the clause was therefore outside its scope. It is probable that the companies will endeavour to obtain running powers during the coming year by means of special legislation.

ST. JOHN'S AMBULANCE ASSOCIATION.

THE Association has another useful year's record to recount of lectures given, certificates gained, invalid transport work carried out, and the various aims successfully fulfilled. The Association is a modern branch of the Order; it was started in 1877. The Order itself dates back to 1048, but it was the 18th century before it was planted in England, to disappear in the reign of Henry VIII. Under its present form the Order was started in England in 1826. The members were united together for the purpose of performing hospitalier work. An important thing done by the Order was the establishment of an ophthalmic hospital at Jerusalem. There are many "overseas" centres, and excellent reports show the various activities carried on, and that, as in England, a good deal of re-organisation has been carried out due to "after-the-war conditions." The railways, as usual, have taken a very active interest in the Association; numerous lectures have been given to the railway men and certificates gained. The Association has done useful work in the London Post Office, in the Police Force, and various other bodies. Interest in ambulance work has been kept up by the competitions held between the various teams. Each centre has sent in satisfactory returns of effective first aid rendered. Throughout the country reports show that the Association has practically recovered from any apathy due to post war reaction and returned to its normal condition. Altogether a most satisfactory year's work has been done.

THE ST. JOHN'S AMBULANCE BRIGADE.

THE "Brigade," an off-shoot of the Association, has also had a satisfactory year's work. This branch of the "Order" comprises women as well as men. The former have certificates in first aid and home-nursing and belong to nursing corps; the latter have first aid certificates and belong to ambulance divisions. During

the year the members have attended the various parades, drills, etc., necessary, and done plenty of useful public work. Brigade duty has been undertaken on many occasions both in London and the provinces, and a number of cases treated of accidents and illness. The members attended the Lord Mayor's Show and similar functions where a crowd was expected, and open spaces on bank holidays. In some cases treated, the patient had perhaps a slight accident, while in another it might be very serious. The Brigade, like the Association, is recovering from its "post war reaction," and excellent reports have been received from the various centres. The Overseas Brigade, also, is in a satisfactory condition, judging from the various reports. During the coming year the Brigade hope to extend the activities of many of the women members by undertaking work in connection with tuberculosis and child welfare in various parts of the country. Members who belonged to Voluntary Aid Detachments during the war-time, and did much useful work, have expressed their willingness to help in these two important spheres, without in any way interfering with the trained workers. In both tuberculosis and child-welfare work there is a wide field for labourers.

TUBERCULOSIS.

THE cessation of the sanatorium benefit under the National Insurance Act has been met by the passing of the Public Health (Tuberculosis) Act, 1921, which places on county councils and county borough councils the statutory obligation—instead of optional powers which they formerly possessed—to make adequate arrangements for the treatment of tuberculosis. Most of these authorities had already made arrangements for the institutional treatment of tuberculous persons in their areas, whether insured or not. Where a council fails to make adequate arrangements at or in dispensaries, sanatoria and other institutions approved by the Minister of Health, he may make such arrangements as he may think necessary for the purpose of such treatment. The cost of treatment of uninsured persons is to be shared equally between the Government and the local authorities. As regards insured persons, the councils will receive from the Government an annual grant equal to the amount which Insurance Companies had available for institutional treatment of insured tuberculous persons in 1920, and which was payable to local authorities in respect of the treatment of such persons (in total approximately £300,000), plus one-half of any expenditure over and above that fixed grant. The total expenditure during 1921 in England and Wales on the institutional treatment of tuberculosis was estimated at £2,300,000, of which £1,300,000 will come from the Exchequer. In addition, the treatment of invalided soldiers, sailors and airmen will cost £200,000, which charge will fall wholly on the Exchequer. The Act also confers on county councils and county borough councils the power to make such arrangements as they may think desirable for the after-care of persons who have suffered from tuberculosis. The power is optional, and the cost must be met by the local authorities. The Government, however, have promised that the question as to their defraying one-half of these expenses would be borne in mind and considered when there was a further opportunity.

VILLAGE CENTRES FOR DISABLED EX-SERVICE MEN.

THE Enham Village centre trains while it makes fit (as far as possible) the men it receives. Many leave the centre completely recovered, others with but slight disability, both classes having learnt a trade. But there are others, the sub-normal men; for these there is a scheme by which cottages are provided for them, and an opportunity given of earning their own living.

In the medical block all the necessary most up-to-date treatment is provided. Practical and theoretical training is given in a variety of industries, indoor and outdoor ones, including poultry farming, forestry, pig and bee keeping, basket making, and carpentry. Capable instructors are on the staff, so that the men get a first-rate training.

The Council hope to be able before long to accommodate 400 men temporarily, in the actual centre, and the estate to accommodate nearly 200 men and their families permanently. The estate consists of 1,000 acres. It is the object of the Council that eventually the centre shall be for use as a national establishment for the restoration to health, and for physical re-education of other persons injured in the service of the State.

A number of ex-service men have already finished their treatment and training, and the results have been most satisfactory. The industry a man is taught is what he is best fitted for under his past war conditions; he has the advice of experts in the matter, and guided in his decision by them. Great importance is attached to the social side of the centre, and to recreation.

VILLAGE INSTITUTES.

THE first village institute to be started in England as a result of the success of Canadian ones was in 1915, now there are well over 2,000. The institutes are non-political and non-sectarian, each one is self-governed and self-supporting, but all belong to the National Federation of Womens' Institutes, with Lady Denman as chairman.

The aim of the institutes is to band together the women of a village for mutual help. The programmes for the year consist of interesting and instructive lectures and practical demonstration, various industries are taught, such as shoe mending, glove making, home dyeing. When possible the members carry out the entire programme themselves; the scheme enables those who are familiar with any special industry to pass on the knowledge. Advice is given on bee keeping, poultry and gardening. Exhibitions are held showing the various forms of work done by the members. Competitions are got up and prizes given for the best made article. These institutes are entirely confined to villages, and have been found to fill a much needed want; they help to widen the interests of the members and brighten up what is so often just routine work. The institutes are for women only; young girls are admitted as associates. Libraries are an important side of the institutes, and "savings associations." When the Federation was first started it was "mothered" by the Agricultural Organisation Society, then by the Government, but now the Federation is able to stand alone.

VOLUNTARY AID DETACHMENTS.

By far the largest number of members of the Voluntary Aid Detachments are women. The activities of the whole force is now centred on Peace work. Special courses of instructions are to be given on tuberculosis work in order to fit the members to volunteer for work under the direction of the medical and nursing staff in charge of the tuberculosis cases. Not only is it anticipated that the work will be done at a tuberculosis dispensary, but continued at the patient's home. In child-welfare work there is much to be done, two branches are especially to be helped by the V.A.D., *e.g.*, Infant Welfare Centres and Day Nurseries; the work will consist of home visiting and helping at the centres. In various ways work among cripple children is to be another field for the V.A.D.'s labour; it is anticipated much good could be done by following up the children in their homes and seeing to and assisting in the carrying out of the treatment ordered at the hospital the child attends. The Voluntary Aid Detachments are anxious to be of use wherever their services are of value, and it is anticipated many opportunities will arrive that will enlarge their sphere of activities, and it is thought that it will become the natural thing for any public movement to look to the Red Cross for help. One thing it is necessary to remember—new members must qualify for admission by examination, women in both first aid and nursing, and the men in first aid.

EQUAL CITIZENSHIP.

THERE is a growing desire on the part of many women to obtain equal citizenship with men, and a number have formed a Union to gain their object. Mrs. Wintringham, M.P., was one of the early members of the Union, and Viscountess Astor, M.P., is a Vice-President. The members are out to gain the enfranchisement of women on the same terms as men. They wish to have many more women in Parliament, and worked hard at the Lough election where Mrs. Wintringham was returned. Equal guardianship of children and State Pensions for widows with dependant children are other aims they have in view. Equal pay for equal work for men and women is another. One of their chief works at present is the League of Nations and the practical application of the principle of equal opportunity for men and women within it. The Union is really a combination of various societies, under the title "National Union of Societies for Equal Citizenship"; mixed societies belong, and men are prominent members. The Union has been responsible for many lectures and meetings of various sorts to instruct people and to stimulate general interest in the aims the members work for. The Parliamentary work has been very active during the past twelve months, and doubtless will become more so now that the "women members" are doubled in the House. The subject of women jurors in all its branches is another activity of the Union.

CONSERVATIVE WOMEN'S REFORM ASSOCIATION.

THE chief object of this Association is to push reforms for women on constitutional lines, to band together men and women for this purpose.

The Association was formed out of the Conservative and Unionists Women's Franchise Association. Among its various aims the promotion of reforms dealing with domestic and economic subjects is considered one of the chief. Another of the objects is to strengthen a sense of individual responsibility, and to oppose excessive State interference and control; and another important one, to press for an adequate proportion of women on public bodies and in civil services. The Association publishes a monthly paper. The work of the Association is promoted by meetings of various sorts, and by the distribution of literature, by lectures, conferences, &c. During the last year the executive sent three written amendments to Bills before the House, and were represented on 15 committees dealing with matters of importance to women or children, including the League of Nations Union, and the Council for the Representation of Women in the League of Nations, and the Provisional Committee of the Women's League of Nations. The Countess of Selbourne, J.P., who has been President of the Association not only in its present form, but in the old days, has recently resigned. She will still be associated with it, however, and will be a member of the executive. During the past year the Association had a stall at "The Fair" at Claridges, which was a great financial success. An important branch of the work during the year was classes for speakers.

THE WOMEN'S INSTITUTE.

THIS centre of activity has a large roll of members, both professional women and those engaged on public work of various sorts. A number of important societies are associated with it, and each year the list grows larger. Very useful lectures have been arranged, and experts on the various subjects have been the lecturers; a wide field has been covered. Exhibitions have been held, and activities of different sorts, all connected with women's work and interests, carried out. The Institute attained its majority two years ago, it is well spoken of as, "The Father and Mother of Women's movements." It is entirely non-political, and rightly prides itself upon its open platform, where questions are freely and fully discussed. The scope of the Institute is constantly being widened. Originally started as a central office of information about the various departments of women's work as their fields of labour widened—so does the Institute. The Information Bureau is one of the most valuable sides of the work, especially where it gives particulars of women's work, and necessary training to future workers. Besides being a boon to the professional woman, it forms a link between the leisured woman and the work waiting for her among the blind, old age pensioners, girls' clubs, and other forms of helping the less fortunate. The excellent library is very useful to the busy woman, who can find there practically all books referring to women and their work.

WOMEN ON LOCAL GOVERNMENT BOARDS.

THE Women's Local Government Society has been very active during the past twelve months; as it is entirely non-party, eminent women of various shades of political thought are among its members. With the ever increasing number

of women entering public life—especially as Councillors—there has been a great demand for information on various matters relating to their work, 53 women are serving on County Councils in England and Wales, 164 on Town Councils, and 75 on Urban District Councils. There still are many Councils where there is no women members. The Society is striving to alter this. The following organisations have recently become affiliated to the Society, e.g., The Bishop Auckland Women's Council, The Eastbourne Women's Citizens Association, The Reading Women's Local Government Association. The Society has been officially represented on several organisations. A monthly paper is published, giving all particulars of the past month's most important work and the chief events of the coming one. Very useful leaflets are also published from time to time. The Society watches very closely any Bill that is before the Houses of Parliament that touches its work, and when it is considered necessary takes active steps immediately, as it has done with several Bills the last few years, such as Juvenile Courts (Metropolis) Bill, and the Criminal Law Amendment Bill. Several new members have joined the Society during the past year.

WOMEN'S NATIONAL LIBERAL FEDERATION.

THE total number of affiliated Associations is 19,763, with a membership of 74,633. Some of these Associations have been in abeyance during the war, but have now been reorganised and built up their membership afresh. The Federation has done a full year's work, 24 conferences have been held. The main objects of which have been: "Ireland," "League of Nations," "Free Trade," "Financial Stability," and "Industrial Problems." The conferences have been in various parts of England, many well known speakers have taken part. Lady Cowdray was elected President during the past year. Certain Parliamentary Bills have been actively supported, e.g., Juvenile Courts (Metropolis) Bill, Women and Young Persons Unemployment Bill, Bishop of London's Criminal Law Amendment Bill, Dominion Home Rule (Lord Montagu's), and the Plumage Bill. On various important questions of the day resolutions have been adopted and passed on to the authorities concerned as the voice of the Liberal Women of England. Some of the most important resolutions were on Free Trade, German Indemnity, the League of Nations, Industrial Policy, and the Criminal Law Amendment Bill (No. 2) H.L. Wherever a Free Liberal candidate was standing in a by-election the Federation worked hard in his favour. At the Louth by-election, where Mrs. Winttingham was returned, the enthusiasm of the Federation was of course very great, and a good deal of hard work was done to ensure her return. The Federation work in a close and active co-operation with local Liberal Associations, but retains its own independence. It is the opinion of the members that for the political development of women it must stand alone.

WOMEN'S ORGANISATIONS.

WOMEN'S organisations have become very numerous of recent years. During the Spring Lady Astor, M.P., held a series of informal conferences at her house to put in touch with

each other the officers of the various Societies. The outcome of these meetings was the formation of a "Consultative Committee of Women's Organisations." Already 40 different constituent societies, composed wholly or partly of women, including professional societies, trade unions, educational, social, medical, and religious organisations, are represented on the Committee, whose object is to collect and communicate information of mutual interest, and to consult together to the best means of action. At the first full meeting of the Committee the officers were elected, and many important points discussed. The Chairman is Lady Astor, M.P. The Committee has no definite programme of its own, it is mainly a co-ordinating body, but it may recommend action to its constituent societies. It seeks to provide a means for co-operation among women's organisations, and one of its principles is that no action shall involve any dissenting society. Urgency resolutions were passed at the first Committee Meeting, and a telegram was sent to Dame Rachel Crowdy, League of Nations, on the matter of the "Traffic in Women," so the Committee lost no time in commencing their work. The future activities were also discussed. Lady Astor dwelt especially on six, e.g., Women Police, Mother and Child Welfare, Venereal Disease, Housing, Municipal Elections, and an appeal to ex-Service Women.

WOMEN POLICE.

THE Women's Division of the Metropolitan Police has done excellent work during the past twelve months, and in every way justified its existence. The Superintendent (Mrs. Stanley) has, out of a large number of applicants, chosen just the right women for the responsible work that falls to a "police woman." The Division has won universal respect in all parts of the Metropolis—from all classes that have come into touch with it. The work is almost entirely in connection with women and girls, but in carrying out their duties the police women naturally come in touch with the general public, as a large amount of their time is taken up with the matter of the protection of women from street dangers. None are admitted to the division under 25 years of age, and only women of good physique and who can produce excellent references are suitable. The pay is good, and the hours compare well with other branches of work. The officers are promoted from the ranks, but a good general education is necessary, otherwise a police woman cannot gain promotion. Married women and widows are admitted, provided provision can be made for the care of their children—if any. Recruits have three months' probation. Those who are interested in the welfare of women and girls, especially those connected with rescue work, consider there is a great future before the police woman, and a wide scope for her activities, not only in London, but in other cities, and especially seaport towns.

WOMEN'S POLITICAL ACTIVITIES.

THE various political organisations in the woman's world have been very active during the past twelve months, not only in getting up meetings, but in endeavouring to organise the woman voter, and also to instruct her in economic matters; a good deal of spade work has been done.

WOMEN'S UNIONIST ORGANISATION.

THE Women's Unionist Organisation was formed in 1923, when women were given the vote; it is a Branch of the National Unionists Association. The work of the women's organisation is not only to help at the time of an election, but to do all that is possible to organise the women's vote. England and Wales have been divided into 13 districts, with a woman agent appointed to each, who works in conjunction with the man district agent. The agents, amongst other work, start organisations among women where none already exist; the agents are in continual touch with the Headquarters and receive all the assistance they require. One important side of the work is to provide speakers at meetings, and there is a great demand for capable speakers. If there were more speakers far more work would be done. Other workers help in various ways, such as getting up meetings and entertainments, lending rooms when required, and motor cars (or other vehicles) at elections, also by political visiting. The Organisation is ambitious, not content with what it has already done during its short existence, it looks forward hopefully to doing much in the future. It is its aim to so cover England and Wales that every woman entitled to a vote may have no difficulty in obtaining reliable information on political matters.

PROFESSIONS OPEN TO WOMEN.**THE WOMAN DENTIST.**

WOMEN can now enter the dentist's profession, and undoubtedly there is as good a field for their labour as there is for the woman doctor. Two courses are open to a woman as to a man. They can content themselves with being dentists only, or surgeons and dentists; the latter is of course much the best. Some of the general hospitals have their own dental department, but many students prefer to do their dental training at a special dental hospital, such as the Royal Dental Hospital, Leicester Square, where women are admitted on just the same conditions as men, and have their own club room, and women are already studying there. Students commence their studies at 16 years of age. The approximate cost to obtain the diploma in Dental Surgery is just over £200 (for fees). The length of training is four years. Before entering the hospital it is necessary to have passed a preliminary arts examination, and Latin must be one of the subjects taken. The course of training to become a "Surgeon Dentist" is over five years, and means a higher fee. It is possible to obtain the training in dental mechanics with a registered dental practitioner, and then to finish the dental training at a hospital; but this course is not recommended. Whatever plan is decided on, a certain time has to be spent at a general hospital for the study of general anatomy, surgery, and other subjects. If a girl wishes to enter the profession she will find that there are several scholarships to be aimed at, and also prizes at the dental schools.

ANALYTICAL CHEMISTS.

The profession of analytical chemistry has several women among its members, and they have been found very well suited for the work.

It is necessary for a woman to train just as a man does. The colleges and examinations are all open to them. The usual course is to obtain a scientific degree at one of the Universities or to become an Associate of the Institute of Chemistry. For the former, three years must be spent at the University; the latter requires about the same length of time spent in study. If the two qualifications are to be aimed at it means nearly four years' work, and this is the best plan for a future analyst. The higher the qualifications the better prospects there will be. Some of the Provincial Universities now grant degrees in applied science. London and most of the Universities admit students at 16 years of age. To become a successful analyst it is necessary to have general experience and then to concentrate on one special branch, such as food, milk, metals, drugs, or so forth, as each is a world in itself, and some are especially suited to women. On the whole, women are well received by the profession. A well qualified woman should have no difficulty in succeeding. The cost of training is much the same as for any degree. It is possible for about £200 to cover all the necessary expenses of a three years' course.

WOMEN DOCTORS.

The training of women students in London is no longer restricted to the School of Medicine for Women. Several of the large general hospitals now admit them on the same conditions as men. The number of women entering the medical profession is on the increase year by year, and the women doctors have been most successful in obtaining various hospital and other appointments. The length of time required to train is five years for those who wish to pass the "Conjoint Board," e.g., Royal College of Physicians, London, and Royal College of Surgeons, England. To obtain a medical degree takes longer. The cost of training (the fees) can be covered by about £200. It is an open question as to which is the most satisfactory, co-education among medical students, or the reverse. While many prefer a mixed school, a large number still like one for women students only, judging by the crowded class rooms and laboratories in the School of Medicine for Women. There are a number of scholarships at their own school, and also at others, that they can compete for. The prejudice against women doctors has practically died down—at least among the profession—killed by their excellent work for the wounded. There is plenty of scope for women not only abroad, but at home, and as the various organisations for the prevention of diseases grow, so will their work, especially in connection with tuberculosis, and also child welfare, and in the near future both will receive a great deal of attention.

DOMESTIC SCIENCE.

There is an ever-increasing demand for well-trained domestic science workers. At last it is realised that to control domestic workers on a large scale the chiefs must be trained women, thoroughly well versed in the work of the employees, to be able to detect a fault, and know how it is to be remedied. The large laundries engage trained women as managers and assistant managers. The large restaurants engage trained women to supervise the general work, and so on in various branches of work.

There is a College of Domestic Science in connection with King's College University of London, and also various other colleges in London and the provinces. Excellent tuition is also given at several of the Polytechnics, where classes, practical and theoretical, are held in practically every branch of the work. There are special schools for cookery alone that turn out many "lady cooks," as well as those who have studied with the intention of teaching eventually. Some of the large institutions now keep a trained domestic science manageress in place of the old-fashioned housekeeper, and undoubtedly this will before long be the general rule. The work is only suited for girls who have a taste for domestic matters; others who have no inclination that way would never be successful workers. It is best to get a fairly general training for most branches of the work, but for laundry work it is of course useless to touch anything else, but just to specialise in it.

THE TEACHING PROFESSION.

There is a great demand for teachers at the present, and as far as one can judge it is likely to continue. While the greatest number are wanted for general teaching, there is also an opening for those who specialise in certain subjects—domestic science, game mistresses, and dancing mistresses especially. To success in the profession it is essential to be thoroughly well trained. The elementary school mistress has to go through a definite course of study, and must start very young. To become thoroughly well-fitted for teaching, it is essential nowadays to obtain a degree. There is quite a number of Universities to choose from, as all the English ones now admit women. The usual time to study for a degree is three years, and then, when the degree is gained, a year must be spent training at a training college. The Universities nearly all admit women at 16 years of age. Certain colleges are for women only, while in others there is co-education. Which branch of education is to be studied must depend on what subject interest the student most. There is more demand for teachers in arts than for science ones. The appointments open to teachers are of various sorts—resident, non-resident, for a whole-time appointment, and visiting ones. Besides appointments at schools, there are the various posts at Universities to be aimed at, and finally every mistress can aspire (though few can achieve) to be a "Lady Principal."

PHOTOGRAPHY AS A PROFESSION FOR WOMEN.

Several women have succeeded well as photographers, and there is undoubtedly a field for those with a little capital to set up on their own account once they have gained sufficient practical experience. The subject must be thoroughly mastered in all the usual branches, including the business side. To be really successful it is necessary to be somewhat of an artistic temperament, as the modern photograph is quite an artistic picture. To study there are two courses open, either to go to a really large photographers and learn the work, or else first of all to go to classes and learn both the practical part and the theoretical. Excellent tuition can be obtained at various Polytechnics. Once the knowledge is gained a post can be obtained.

The class of photographer whose studio is entered must depend entirely on what sort of work is aimed at. If it is intended to aim at cheap photography then a studio must be sought where speed and turning out inexpensive photography is the rule. If it is the wish to aim at really high-class work (as the women photographers usually do), a good class studio must be sought. It is a mistake to think of starting a studio until a great deal of experience has been gained, not only of the actual work, but of the business side as well. There are so many branches in the photographic world. Press photography is one of the important ones, and would be a very interesting one for an enterprising woman photographer.

WOMEN DISPENSERS.

An increasing number of women have of recent years entered the pharmaceutical world, and a far larger number have contented themselves with obtaining the certificate necessary for dispensing only, e.g., the Royal Society of Apothecaries Assistants' Examination. Under their new regulations the qualifying examination of the Pharmaceutical Society, which enables the successful candidate to run a chemist and druggists shop (or to hold a dispenser's post if wished), is divided into two parts, and has given up its old name of the "minor examination." The training takes three years, and at least one year must be spent in a chemist's shop (this is quite a new regulation); two years is the specified time, but exemption can be given for one year. The rest of the time must be spent dispensing in an institution of some class, and in study in a college recognised by the Society. Before entering for the Assistant's Examination at least nine months' practical dispensing must be done, and it is necessary to study the various subjects at a college. It is the wisest plan for a woman to enter for the highest qualification, but those who cannot give the necessary time to the long training can content themselves with the "Assistants' Examination." There are numerous appointments open to women, but to the most important are only appointed those that have the Pharmaceutical Society's qualification.

THE WOMAN AUCTIONEER v. ESTATE AGENT.

If a woman wishes to become an auctioneer and estate agent she should aim at the highest and obtain the degree now granted by the University of London, e.g., Bachelor of Science (Estate Management). There is no question of being a regular student at the University, she can just work up for the examination while doing her training as an article clerk to an auctioneer, estate agent, or valuer. Twenty-one years of age is the youngest at which a woman can become an Associate of the Auctioneer and Estate Agents Institute. It is only of very recent years that women have been admitted to the Institute. Before then it was quite impossible for them to work in the auctioneer and estate agents' world; they would have been quite outside the field. As in other professions it is necessary to, first of all, pass a recognised Arts examination. The subjects that are studied for the Degree and for the examinations of the Institute are very practical, technical ones, so that the student becomes thoroughly well versed

in every branch of the work. By the time she is a qualified auctioneer and estate agent she has a good sound practical knowledge. The prospects of the woman auctioneer rests very largely with herself. Besides her professional knowledge, she must have a good business head and plenty of perseverance. There are undoubtedly plenty of good openings for women in the country as well as in London, provided the right women take up the work.

THE WOMAN ACCOUNTANT AND AUDITOR.

The Society of Incorporated Accountants and Auditors now admit women, thus opening the door to a very rich profession. The work is only suitable to a girl who is quick and accurate at figures. It is necessary to either pass the preliminary examination or gain exemption by having previously passed one that the Society recognises. Five years must be spent as articled clerk to a member of the Society. A premium is required, usually about £100. A small salary is paid increasing each year. There are two examinations to be passed. The study for them is done during the clerkship. A certain amount of coaching is necessary. The final examination is taken during the fifth year. The examinations are held in London, Manchester, Glasgow, Dublin, and Belfast. On passing the final examination the candidate joins the Society and becomes an "Associate," and then later on a "Fellow." The Institute have an excellent library, thus saving the articled clerks a considerable amount of money by being able to use certain books instead of having to buy them. The prospects of the woman accountant are very good. It is a profession where money is to be made. There are well-paid appointments to be aimed at, or an ambitious woman with ability and a good business head could look forward to setting up a practice on her own account, or two women could go into partnership. The more women enter the commercial world the more work will there be for accountants of the same sex.

THE WOMAN ARCHITECT.

The Architectural Profession is one that has recently opened its doors to admit women, and several students are studying for the examination. There are various schools of architecture. The London University has its own school, and so has the Architectural Association; the usual course of training is three years, and the total cost can be estimated at about £200. That figure includes college and examination fees, books, &c. During the course the student covers a very extensive field of architectural knowledge; she studies not only design but the materials necessary in building. Although a talent for drawing is an advantage, it is not essential. During the training the work is made very interesting; visits are paid to old buildings, museums, and other objects of interest. The architectural schools expect a very high standard of work from their students, so that if one is a slack worker she (or he) is not encouraged to continue their training. There is undoubtedly a good prospect before the highly qualified woman architect, as in the near future so many improvements in houses are looked for, and that will give scope to the ones that have originality. The newly qualified architect must be content

to work and gain practical experience for a few years before expecting to launch out in any special way. It is impossible to say what a woman should expect in the way of a salary, as just now they are in all professions somewhat in the melting pot.

CHILD-WELFARE WORK.

There is a wide field for women in connection with Child Welfare in its various branches. To be a really good worker and capable of holding a responsible appointment a thorough training is necessary. It is essential that a certain amount of hospital training is done, if possible, at a children's hospital, and classes attended in domestic science and hygiene; these can be taken at the various schools and polytechnics. The future worker has to learn the special subjects that will be not only useful but necessary to her in her future work. It is best to start child-welfare work quite young, but maternity training cannot be taken until later, as no woman can enter for the necessary examination until 24 years of age, so that it must come at the end of the training. To make a satisfactory child-welfare worker it is essential to have a real love for children and a desire to learn all one possibly can; the work will be at an Infant Welfare Centre, or a hostel for mothers and babies, or a crèche; there are assistants, assistant matrons and matrons, assistant superintendents and superintendents. It is usual to start work at a crèche, as quite young girls are taken, and then to go right through the various branches. If the nursing experience (other than midwifery) is gained at a children's hospital it will be found that probationers are admitted at a much younger age than is the case at a general hospital. This branch of women's work is certain to increase and to branch out into fresh activities.

MASSAGE.

If a woman wishes to study massage she must be very careful to attend a school that is "recognised," otherwise she will not be allowed to enter for the examinations of the Incorporated Society of Trained Masseuses. The training is either six or twelve months, according to the examination entered for; to become a teacher takes longer. Students are obliged to get practical experience on patients at a hospital, this is included in their school work. They learn a certain amount of anatomy and other subjects connected with their work. A student must be 21 years of age before she can enter for the examinations of the Incorporated Society of Trained Masseuses. The work is only suitable for a strong girl, not only does it entail a good deal of standing, but in some appointments the work is continuous with very few breaks during the working hours. There are quite a number of good openings for a skillful masseuse, and good pay can be obtained. The appointments are at hospitals, children's homes, and various institutions. The most lucrative work is that of the masseuse who has a private practice. Once a good connection is made, she can charge a fairly high fee, and attend several patients in one day. It is an excellent profession for a girl who has a good connection among medical men, provided their practice is in a well-to-do neighbourhood. Teaching is another satisfactory branch once a good opening is found to start a school.

(1900) November was fine and dry but with much fog. During the first week, and from the 20th to 24th, sharp frosts occurred at inland stations, the minimum temperatures recorded during the second of these cold spells being the lowest of the season up to that date.

The mean temperature for the month, however, was above the average in all parts of the country, the excesses ranging from 0.2° F. in England E., to 3.6° F. in Ireland N. The highest reading reported was 62° F. at Weymouth on the 8th and at Ardrornish (Argyle) on the 15th. The lowest reading was 15° F. at Balmoral on the 24th. It was frequently warmer in Scotland than in England. Thus ground frost was registered on only 3 nights at Edinburgh, compared with 17 nights at Kew. Strong gales occurred in Scotland about the 15th doing much damage. The maximum wind velocity was 81 miles per hour at Falmouth on the 30th. Rainfall was below the average in all parts except Scotland, N. In most parts of England the total fall was less than half the normal amount. At Liverpool (Bidston) the total was only 0.65 in., which is the lowest experienced there in November for 55 years. The daily average of sunshine varied from 0.87 hr. in Scotland W. to 2.99 hrs. in the English Channel. At Copdock, (Ipswich) it was the sunniest November on record. At this station the total sunshine recorded in October and November was 15 hours in excess of that recorded in the previous August and September. Aurora was seen in Scotland on 4 nights and the Zodiacal Light was observed in Jersey on five occasions.

The Autumn, August 26th to November 27th, was mild and dry but dull. Temperature was normal in England E. and the Midland Counties, and 0.2° F. below normal in England S.E. In all other Districts there was an excess, rising to 2.2° F. in Ireland N. The highest reading reported was 76° F. in England S.E., and the lowest was 15° F. in Scotland E. Rainfall was deficient very generally, the only exception being Ireland, where in the South there was an excess of 0.4 inch. In England S.E. the total fall was less than two-thirds of the normal amount. Sunshine was slightly above the average in Scotland N.; England E.; and England N.W., but was below the average in other districts, the defect equalling or exceeding half-an-hour per day on the average in the Midland Counties, Scotland W., and Ireland S. The sunniest districts were England E., with a daily average of 4.1 hrs. or 37 per cent. and the Channel Islands, with a daily average of 4.1 hrs. or 38 per cent.

December was cold, but with a very mild spell at the end, especially in Scotland. Strong gales and heavy rains were experienced during the first days of the month. Much damage was done to shipping, and on the moors near Halifax a tram car was blown over and passengers injured. The maximum gust velocity rose to 84 miles per hour at Southport on the 3rd. There was much fog about the 6th and 7th and heavy snow on the 11th. At Salcombe (Devon) the snow was over a foot deep and was the heaviest experienced there for 29 years. Temperature on the whole was below the average, the greatest deficiency being 1.4° F. in Ireland S. The highest reading reported was 60° F. at Raunds and at Wistanstow on the 26th, and the lowest was -1.0° F., also at Wistanstow on the 27th.

The total rainfall for the month varied a good

deal. Expressed as a percentage of the normal it was:—England and Wales, 80; Scotland, 81; Ireland, 99, and the British Islands as a whole, 84. The average number of wet days was 22. Sunshine was less than usual in Scotland N. and in the east of England, but was in excess elsewhere. The sunniest district was Ireland S., with a daily average of 1.7 hrs., while in Scotland N. the average was only 0.3 hr. Scotland, however, had the sunniest station in Fortrose with a daily average of 2.61 hrs. Aurora was widely seen in Scotland, and as far south as Liverpool, on the 4th, and at a few stations on various other dates, among them being Seskin (Carrick-on-Suir) on the 31st.

(1901) January was abnormally mild, with much rain and little sunshine. The Cyclonic weather which set in before Christmas continued throughout January. At South Kensington (roof station) the temperature was continuously above the freezing point from December 17th to February 3rd. Gales were few, the heaviest being that on the 18th, when a gust velocity of 76 miles per hour was registered at Salisbury. The temperature was above normal in all Districts, the excesses ranging from 2.2° F. in Scotland N. to 6.8° F. in England E. and the Midland Counties. The highest reading reported was 60° F. at Llandudno on the 4th, and at Killarney on the 9th, and the lowest was 11° F. at Braemar on the 15th. Rainfall was above the average except in Ireland S. and the English Channel. The average number of wet days varied from 17 in England N.E. to 29 in Scotland W. Very high totals were reported at individual stations, up to 42.5 ins. at The Styne, near Borrowdale. At Invergarry (Inverness) 4.2 ins. fell on the 21st, and at Ardgour (Argyll) 3.4 ins. was collected on the 5th. Over the British Isles as a whole the rainfall was 145 per cent. of the average, and the month ranks as one of the wettest Januaries on record. Sunshine was deficient in all parts except Scotland E., where the daily average, was 1.4 hrs. or 20 per cent. of its possible duration. In Scotland N., the daily average was only 0.7 hr. Felixstowe was the sunniest station with an average of 2.0 hrs. daily. Aurora was noted on the 20th, 27th and 30th, and the Zodiacal light on the 9th, 12th and 31st. Halos were frequently seen.

February was abnormally dry, with high temperature and moderate cloudiness. There were but few gales and the maximum gust velocity reported was only 60 miles per hour. Temperature, though commonly lower than in January, was above the average in all Districts, the excesses ranging from 1.2° in Ireland S. to 3.2° in Scotland N. The extremes however were higher than in the previous month, being 63° F. at East Ham on the 24th and 12° F. at Braemar on the 8th. The outstanding feature of the month was its great dryness, and at many stations it was not only the driest February for many years, but also the driest month on record. Generally the month was the driest February since 1895, and over a large area the total fall was less than one tenth of the average amount. At Enfield the total for the month was only 0.1 in. Expressed as a percentage of the average the rainfall in England and Wales was 15; Scotland, 39; Ireland 51; and the British Isles as a whole, 34. Bright sunshine did not differ greatly from the normal, the differences ranging from 0.8 hr. in excess in England E. to 0.8 hr. in defect in Ireland S. The sunniest stations were Plymouth and Trawsey, with a daily average of

3·6 hrs., and Jersey (St. Helier) with an average of 2·7 hrs. A sun-pillar was seen at Aberdeen on the 26th, Aurora was observed in Scotland on the 5th, and 12th, and the Zodiacal Light was noted at Oxford on 2nd, 9th, 10th, and 23rd, at Ross-on-Wye on the 25th and 26th, and at Tenbury on the 26th.

The *Winter*, November 28th to February 26th, was warm and dry but dull. Temperature was above the average of the period in all the districts, though not, as a rule, to any great extent. The greatest excess was 3·4° F. in Ireland N. The highest temperature reported during the period was 63° at East Ham on February 24th, and the lowest was -1·0° F. at Raunds (Northants) on December 13th and 14th. Rainfall was slightly in excess in Scotland E. and W., and in England N.E., but was in defect in the other districts. In England S.W., the total fall was only equal to 79 per cent. of the average amount, while in the English Channel it was equal to only 72 per cent. of the average. Sunshine was slightly above the normal in Scotland E., and in England N.W., but was below the average in other districts, the average daily deficiency reaching 0·5 hr. in the English Channel. The sunniest district was Scotland E., with an average duration of bright sunshine of 1·8 hrs. per day.

March was mild and showery. In the west and north the weather was stormy and unsettled with much rain. In the south and east it was mostly fair and dry. There were but few gales, that on the 15th-16th being the most serious, when great damage was done in the Hebrides. The highest gust velocity reported was 76 miles per hour at Falmouth on the 29th. Temperature was above the average in all districts, the excesses ranging from 1·6° F. in Scotland N. to 4·3° F. in England E. The highest reading reported was 66° F. at Camden Square on the 25th, while the lowest was 5° F. at Braemar on the 7th. Rainfall was above the normal in Scotland, Ireland and England N.W., but below it elsewhere. In Scotland W., the excess was 2·7 ins., while in England N.E., the defect was 1·0 in. The number of rain-days varied from 27 in Scotland and the North of Ireland to 13 in England E. At Fort William (Inverness) 14·94 ins. of rain fell during the month, 2·1 ins. of which fell on the 8th. The general rainfall expressed as an average of the normal was:—England and Wales 201; Scotland, 170; Ireland, 229, and the British Isles as a whole, 133. At Sheepstor (Dartmoor) 749 ft. above sea, during the 100 days from December 19th to March 29th no snow fell, an event unprecedented in the memory of the oldest inhabitant. Sunshine was deficient except in the eastern parts of England where its daily average in places exceeded 5 hrs. per day. At Yarmouth it exceeded 5½ hrs. per day, while at Bolton (Lancashire) it was only just over 1½ hrs. per day. Aurora was seen in Scotland on five nights. The Zodiacal Light was noted at Tenbury on three nights. Fog was almost entirely absent during the month.

April was mild, very sunny and dry, but with cold spells and frequent night frosts. There was a marked absence of strong wind; the highest gust velocity reported was 63 miles per hour at Scilly on the 17th. The mean temperature was above the average in all parts, the excesses ranging from 0·7° F. in the English Channel to 2·2° F. in Scotland N. Readings of 70° F. or above were recorded in all districts except Ireland N., and the English Channel, the

highest being 75° F. at Camden Square on the 28th. The lowest reading was 18° F. at Braemar on the 16th. Although the mean temperature was above the average, the nights were often very cold, and in most parts of the country the mean minimum temperature was below that for January. Ground frosts were numerous and caused much damage. Rainfall was deficient in all parts. Expressed as a percentage of the normal the rainfall in England and Wales was 59; in Scotland 61; in Ireland 46, and over the British Isles as a whole, 56. At many stations the total fall for the month was less than an inch, and in parts of Ireland S., it did not reach half-an-inch. The average number of rain-days ranged from 9 to 13. Sunshine was abundant in all parts, the daily average ranging from 6·25 hrs. in the Midland Counties to 8·10 hrs. in the English Channel, where the observed duration was 59 per cent. of the possible duration. At Salcombe (Devon) the daily average exceeded 9 hrs. and equalled 66 per cent. of the possible duration. Some heavy thunderstorms were reported, that on the 9th at Sheffield causing the death of two horses. On the 19th damage was done by lightning at Edmonton, London N. There was not much fog during the month. Aurora was observed on three nights and the Zodiacal Light was noted on six evenings.

May was fine and dry over the greater part of the country but unsettled in the extreme North-West. There were few gales, and the highest gust velocity was under 70 miles per hour at Paisley on the 30th. Of the 315 reporting stations only 22 reported gales during the month. Temperature was above the average except in Ireland, where in the south it was normal and in the North it was 0·4° F. below. In England N.E. the mean temperature was 2·9° F. in excess of the average. The highest reading reported was 83° F. at Weymouth on the 25th, while the lowest was 22° F. at West Linton and Eskdalemuir on the 5th. Ground frosts were frequent and in places much damage was done to the crops. The Observer at Sheepstor (Dartmoor) reported that during the period March 24th to May 5th ground frost was noted on 40 occasions. There were several thunderstorms. Rainfall was in excess of the average in Scotland N., but below it elsewhere, the greatest defect being in England E., where the total fall was little more than half the usual amount. The highest amount collected in one day was 1·34 ins. at Rothessay on the 30th, which is more than was collected at Aberdeen during the month. The general rainfall expressed as a percentage of the normal was:—England and Wales 79; Scotland 108; Ireland 90, and the British Isles as a whole, 92. Sunshine was in defect in Ireland but in excess in all other districts. In Ireland, S., the deficiency was nearly one hour per day, while in England N.E., there was an excess averaging 1·57 hours per day. The sunniest district was the English Channel with a daily average of 8·06 hrs., while the sunniest station was Yarmouth with a daily average of 8·90 hrs. Fog was reported from the 11th to the 14th. Aurora was seen on the 13th as far South as Okehampton (Devon), and at Northern stations on the 15th, 17th and 20th, and at Tenbury (Worcestershire) on the 21st. Halos were frequently seen.

The *Spring*, February 27th to May 28th, was warm, dry and sunny. Temperature was above the average in all districts, the greatest excess

being $2^{\circ}9'$ F. in England N.E. In each of the three eastern districts of England N.E., E. and S.E., 10 weeks of the 13 weeks comprised in the period were classed as "unusually warm."

Rainfall, though generally deficient, was in excess by $2^{\circ}5$ ins. in Scotland N. and by $0^{\circ}67$ ins. in Scotland W. In many parts of the country there was severe drought, and only two-thirds of the average amount—or even less—was collected. In the English Channel the total rainfall equalled only 58 per cent. of the normal amount. Sunshine was in excess in all districts except Ireland S., where it was $0^{\circ}1$ hr. in defect. The sunniest district was the English Channel with a daily average of 7.0 hours.

June was abnormally dry. The mean temperature was above the average, except in Scotland E., where it was $0^{\circ}2^{\circ}$ F. below. The greatest excess was $2^{\circ}5^{\circ}$ F., which was reported from England S.W., Ireland S. and the English Channel. Readings of 80° F. or above were recorded in all districts except Scotland N., the highest of the maxima being 80° F. at Manchester on the 25th. On the other hand minima at or below the freezing point were observed in all districts except in Scotland N., England N.E., Ireland S., and the English Channel, the lowest readings being 29° F. at West Linton and Wolfelee on the 27th and at Garforth on the 28th. Some violent changes in temperature were reported, thus at Ross-on-Wye on the 17th the maximum was 88° F., while on the next day it was only 64° F. During the night of the 18th–19th the grass minimum at Greenwich was as low as 21° F. Rainfall was below the average in all districts, the deficiency being most marked in the South, where at some stations no rain at all fell. In every district less than one half the normal amount was collected and in England S.E. the total fall was equal to only one sixteenth of the average.

The general rainfall expressed as a percentage of the normal was:—England and Wales 17; Scotland 40; Ireland 24, and the British Isles as a whole 26. Sunshine was below the normal in Scotland N., and equal to the normal in England E. In the other districts insolation was in excess, the variations ranging up to $2^{\circ}55$ hours per day in Ireland S. The sunniest district was the English Channel with a daily mean of 8.98 hours, or 56 per cent. of the possible duration. There was but little strong wind during the month, and the maximum gust velocity recorded was only $60^{\circ}3$ miles per hour at Eskdalemuir on the 9th. Remarkably clear atmospheric conditions prevailed, especially during the latter part of the month. At Folkestone on the 19th the fields and trees on the French coast could be distinguished with the naked eye. Halos were frequently seen and some remarkable sunsets and afterglows were observed.

July was fine, warm and dry. Temperature was above the average in all districts, the excesses ranging from $1^{\circ}6^{\circ}$ F. in Scotland N. to $5^{\circ}0^{\circ}$ F. in the Midland Counties. At Southport the mean temperature was the highest recorded in July for 51 years, and at Camden Square, London, the mean was the highest in any month during 64 years. The highest reading was 84° F. which was recorded at Halstead (Essex), Greenwich and Woking on the 11th. The lowest of the minima was 59° F. at Garforth, near Leeds, on the 5th. Although the mean temperature was high the nights were sometimes cool and ground frosts were experienced on several occasions

during the early part of the month. Rainfall was below the normal in all districts except in Scotland W. and Ireland. In Scotland W. the rainfall was about 125 per cent. of the average, while in England E. and S.E. the total fall was less than 17 per cent. of the usual amount. The general rainfall expressed as a percentage of the normal was—England and Wales 40; Scotland 105; Ireland 130, and the British Isles as a whole 86. Sunshine was above the normal in all districts. The excess was slight in Scotland N., being only $0^{\circ}14$ hr. per day on the average, but in England E., the excess was $1^{\circ}88$ hrs. per day. In the English Channel the mean was as high as $9^{\circ}40$ hrs. per day. The sunniest station was Guernsey with a daily average of $10^{\circ}04$ hrs. Deal had $9^{\circ}28$ hrs. Fog was frequently reported on the Western Coasts, but over the greater part of the area visibility was good. Solar and lunar halos were reported in different parts of the Kingdom, and an exceptional mirage was observed at Skegness on the afternoon of the 10th. There was not much strong wind, and the strongest gust velocity reported was 65 miles per hour at Falmouth on the 29th.

August was an unsettled month. Temperature on the whole though lower than in July was still slightly above the average. The greatest excess was $2^{\circ}2^{\circ}$ F. in England E., while in Scotland E. there was a deficiency of $1^{\circ}4^{\circ}$ F. The highest reading reported was 84° F. at Norwich on the 21st, but maxima of 80° F. or upwards were recorded in all the English districts. The lowest of the minima was 30° F. which was recorded at Balmoral, Braemar and West Linton on the 30th, and at Eskdalemuir on the 31st. Minima at or below the freezing point of water were reported from four districts, while the only district where the minimum for the month was above 40° F. was the English Channel, where the temperature at Jersey (St. Aubins) was 47° F. on the 31st.

Rainfall was below the average in five districts and in excess in seven districts. Of the English districts those in the south and east experienced a continuation of the dry weather of the preceding months. In the North-Eastern district there was very heavy rain on the 29th, when near Newcastle-on-Tyne nearly a ins. of rain fell in 24 hrs. In this neighbourhood the total rainfall for the month was more than double the average. There were several heavy falls in short periods, $2^{\circ}95$ ins. in 30 minutes at Pulham, Norfolk, on the 12th, and $1^{\circ}93$ ins. in 65 minutes at Milton near Peterborough. The station reporting the greatest rainfall for the month was Ardnaham (Argyle), where $8^{\circ}93$ ins. fell on 24 days, while the driest station was Walton-on-the-Naze, where $0^{\circ}48$ ins. fell on 6 days. Expressing the average by 100 the general rainfall for August was: England and Wales 115, Scotland 106, Ireland 108 and the British Isles 110. Sunshine was below normal in all districts except Scotland N., where it was slightly ($0^{\circ}09$ hr. per day) in excess. The deficiency ranged from $0^{\circ}38$ hr. per day in England E. to $2^{\circ}23$ hr. per day in England S.W. The sunniest station was Yarmouth with a daily average of $6^{\circ}09$ hrs. Fog was persistent on the North-East coasts from the 18th–23rd, extending as far south as Yarmouth at intervals. The Irish Sea was covered with thick fog on the 29th, but visibility was mainly good everywhere for the remainder of the month.

Thunderstorms with heavy rains were numerous. The highest wind velocity reported was a gust of 38 miles per hour at Edinburgh on the 27th. Winds exceeding 30 miles per hour were reported only at Falmouth, and the total duration of such winds was only 9 hrs. for the month.

The Summer (May 29th to August 27th) was warm, dry and sunny. Temperature was above the average in all districts except Scotland N. and E., where it was normal. In the Midland Counties the excess reached 2.5° F., and in this district and in the English Channel 10 of the 13 weeks comprised in the period were classed as "unusually warm." Rainfall was deficient in all districts except Scotland W. In England E. and S.E. the total rainfall was only just over one-third of the average, and in 8 of the 13 weeks in the period the rainfall in these districts was classed as "light" or "very light." Sunshine was deficient in Scotland N. by 0.3 hour per day, but was in excess in all other parts of the country, the greatest excess being 0.8 hour per day in the Midland Counties and in Ireland S. In the English Channel the total duration of bright sunshine was equal to 53 per cent. of the time the sun was above the horizon.

September was mostly fine, warm and dry. Temperature for this month was above the average in all districts, the largest excess being 3° F. in England, E. Readings of 80° F. and upwards were recorded at many Stations in the eastern and southern districts mostly on the 8th or 9th, the highest of the maxima being 88° F. at Greenwich on the 9th. The lowest reading recorded was 30° F., which was observed at several stations. Rainfall was below normal except in Scotland, N., where it was 0.24 inch in excess. Less than half the normal amount fell in the districts bordering the South coast and over the greater part of England and North Wales. There was an excess in the extreme South of Wales and over most of the Thames Valley, mainly due to a thunderstorm on the 11th and 12th, when from 1 in. to 2 ins. fell over a wide area. For eight successive months less than half the average amount of rain had fallen over a large area in South-east England. Some large daily amounts were recorded at individual stations up to 3.3 ins. at Loch More on the 3rd. Expressed as a percentage of the average the general rainfall was: England and Wales, 54; Scotland, 81; Ireland, 53; and British Isles, 64. Sunshine was above the average in all districts except Scotland N., where it was 0.79 hour per day in defect. In England N.W. the excess was 1.32 hour per day. In the Channel Islands the average was 7.09 hours, and at Guernsey, the sunniest station, the daily average was 7.81 hours, or 68 per cent. of its possible duration. There was but little strong wind, the maximum gust velocity recorded being 38 miles per hour at Falmouth on the 17th. At this station the wind blew with gale force for 29 hours during the month. At only one other Anemometer Station was gale force reached, and then only for 2 hours. Morning mist and fog were prevalent, especially in the South and South-east. On the 19th dense gloom was experienced over a wide area, and on the 2nd a thick fog prevailed at Pembroke and at Scilly. Solar halos were frequently seen and lunar halos were observed at Oxford on the 9th and 12th. Aurora was seen in Scotland on the 28th.

THE WEATHER AND THE CROPS.

(1920) November was dry and mild, and farmers in all parts of the country were able to make good progress with autumn cultivation and sowing. At the end of the month field work in most districts was well forward, and on the whole the autumn corn had been drilled into a good seed-bed. Early sown wheat, oats and beans were good plants and promised well, except in the east and south-east, where, owing to the dry weather, germination had been slow. The potato crop had been lifted under very favourable conditions, but the tubers were small and there was a good deal of disease in many districts. The yield over the whole country was estimated at 5.80 tons per acre as compared with the ten years' average of 6.20 tons per acre. The total crop, however, owing to increased area, was about 400,000 tons greater than in 1919. Roots were of good quality, having improved considerably in the latter part of the season. Mangolds gave an average yield of 19 tons per acre, but turnips and swedes, with an estimated yield of 14.40 tons per acre, were 1.80 tons above average. Cattle and sheep had done well in the fields, and but little winter keep had been used.

December on the whole was mild, and favourable for field work, though a spell of cold weather about the middle of the month stopped work and checked growth. Advantage was taken of the frost to cart manure, and by the end of the month cultivation was generally well forward, and practically all the land intended for Autumn corn had been seeded in a good seed-bed. The area sown with wheat was greater than in 1919, especially in the east and north. The area for winter beans, however, was slightly reduced as compared with last year. Wheat had germinated well and was a healthy promising plant. Winter oats also showed a good plant, and looked well. Seeds were strong and vigorous. Reports as to the keeping quality of potatoes varied, but on the whole the crop was coming out of the clamps better than was anticipated. Most of the turnips and swedes intended to be lifted had been clamped by the end of the month, and they had proved, as a rule, to be of average size and good quality. Ewes were generally in satisfactory condition, and in a few districts lambing had started with good results. Sheep and cattle had done well, and it had not been necessary to draw upon winter keep to any great extent.

(1921) January was mild and wet, but the rains, though hindering cultivation, did not do much damage to the crops, while the mild weather favoured the live stock, which did well generally. Except on heavy, low-lying land the autumn-sown corn made good progress, and at the end of the month wheat and oats were generally healthy promising plants while beans, though backward in some districts, promised well on the whole. Cultivation was hindered by the rains in all parts of the country, but more so in the west than in the east. Over the country as a whole farm work at the end of January was well forward for the time of year. Ewes were healthy and in good condition in nearly all parts, though in some districts they had suffered from the wet, and in low-lying parts of Wales and Western England fluke was prevalent. The fall of lambs among the early flocks in the south was very satisfactory, and the young lambs were doing well. With the mild

weather and the plentiful keep available cattle and sheep did well in most places.

February was dry and mild in all parts of the country, and favourable for cultivation. Crops did well and field work proceeded without interruption. At the end of the month wheat on the whole was a strong healthy plant, though there were some poor fields in most parts. In some districts wireworm and slugs had thinned the plant. Winter oats and beans looked well, except that beans were rather backward in some parts. The land had worked well during the month, good seed beds had been obtained, spring sowing had begun early, and in the south and east large areas had been drilled with spring corn. Seeds were forward for the time of year. Ewes were mostly in good condition, having benefited from the dry weather, but in low-lying districts, and especially in Wales, fluke had been prevalent. Lambing in the southern counties had been very satisfactory and losses had been light. In other districts lambing prospects were bright. Live stock did well during the month, and winter keep was abundant in all districts.

March was a favourable month for farmers in most places, but in Wales and the north-western counties of England the weather was cold and wet, and in the latter part of the month there was much rain in Devonshire and Cornwall. Cultivation proceeded well, however, and at the end of the month farm work was much more forward than usual for the time of year. Spring sowings of corn were well advanced, and in some southern and eastern districts were approaching completion. Preparation of the land for potatoes was well in hand in most parts of England, but was backward in Wales. Autumn-sown wheat was in good condition except in cold, wet soils. Winter oats and beans both promised well. Seeds did well through the month and a good crop of hay was anticipated. Livestock seemed to have wintered well everywhere. Lambing among lowland flocks was general, the fall of lambs was satisfactory, and both ewes and lambs were thriving. The prospects among the hill flocks were good.

April was a good month for farmers as the dry weather allowed of excellent progress in the fields. Cold winds and frosts, however, checked growth, but little damage was done to crops. By the end of April corn sowing was practically finished in all parts of the country, the drilling having been done under very favourable conditions, except on heavy soils which had become baked and were difficult to break down. At the end of the month rain was wanted in practically all parts of the country. The young crops as a rule were looking well, though they had been checked by the cold winds and frosts and, in some districts, by want of rain. Potato planting was much more forward than at the corresponding period of last year. Early varieties came up well but got damaged by the frosts of the third week of the month. Good progress had been made with the preparation of the land for root sowing. Clovers and seeds had been checked by the cold weather but looked healthy. Rain was needed, however, to ensure a good crop of hay. Cattle and sheep were in thriving condition. The fall of lambs had been above the average generally, and losses of both ewes and lambs were less than usual.

May was warm and dry, with a little rain towards the end and some night frosts. The dry

weather suited the winter corn, and these crops on the whole were strong and healthy. Spring sown crops, however, did not do so well. At the end of the month all the corn crops required rain. Beans and peas were promising, but in many districts the annual weeds were more troublesome than usual. Potato planting was completed during the month in all parts of the country. Early varieties were frequently damaged by frost towards the end of month, though not very severely on the whole. The crops of early potatoes lifted in Cornwall were fairly satisfactory. Mangold sowing was nearly all completed, and where sown early usually a good plant appeared, but as a rule germination was slow for want of rain. Hops grew quickly but were attacked by aphid, and washing had to be begun. Strawberries promised an average crop, but the yield of bush fruit promised to be light. Orchard fruit was much damaged by frost and, except for apples, promised a poor crop. The hay crop was expected to be under average. Livestock had done well. The fall of lambs had been above the average and the lambs were thriving.

June was very dry, and the drought had a bad effect on the grass and spring-sown crops, but was very favourable for the hay harvest. Autumn-sown corn stood the dry weather well, though in some cases the straw was short. Spring-sown crops were patchy and had not done well. Haymaking began earlier than usual in all parts of the country, and in the south was almost finished by the end of the month, while in most of the later districts quite half the crop had been carted. The crops were light but were secured in splendid condition. Potatoes came up well but growth was checked by the drought, and now only light crops could be expected. Hops grew quickly, and by the end of the month the attack of aphid had been checked. Gooseberries were yielding about average but other small fruit was distinctly under average. Orchard fruit promised a light yield except as regards apples. By the end of the month the pastures had become very bare and scorched. Cattle and sheep had done fairly well except for want of water. Expressing an average crop by the appearance of the crops at the end of June indicated probable yields per acre as follows: wheat, 200; barley, 87; oats, 80; beans, 94; peas, 93; potatoes, 90; mangolds, 91; seeds-hay, 90; meadow hay, 77; and hops, 96.

July was very dry, though in the north and south-west of England, and in Wales rain fell during the last ten days. The corn harvest began early, and in many southern districts most of the oats and a fair proportion of the wheat was safely in stack before the end of the month. During the month wheat improved but barley deteriorated. The hay harvest was finished in most districts by the middle of July and the crops were secured in good condition with a minimum of labour. Seeds-hay crops proved better than meadow hay but both were much below average. Potatoes deteriorated during the month. Mangolds where sown early showed good plants, but growth was slow, and at the end of the month the prospects for this crop, as for turnips and swedes, were unsatisfactory. Pastures were short of grass and in consequence store stock and milking cows required hand feeding in some districts. As a rule sheep stood the drought better than cattle. Hops suffered

most among the young plants, but the older hops in well-managed gardens stood the dry weather fairly well. In the south-eastern district aphid attacks were persistent, but in the western district this pest was less troublesome than usual. Turnips grown for seed had mostly been harvested, in good condition, by the end of the month, with the prospect of an average yield. Many apples fell from the trees owing to the drought, but generally an average crop could still be expected. The yield of pears, however, would be light, while plums were practically a failure. Expressing an average crop by 100 the prospects at the end of July of the probable yields per acre were: wheat, 101; barley, 86; oats, 87; beans, 87; peas, 88; potatoes, 81; turnips and swedes, 66; mangolds, 84; seeds-hay, 89; meadow hay, 75; and hops, 89.

August was dry on the whole, though in the North and West there was a good deal of rain. In some cases the rain hindered work on the land, but as a rule farmers were able to make good progress and throughout the greater part of the country practically all the corn had been secured in good condition by the end of the month, and in many places ploughing and cleaning of stubbles was more forward than usual. The wheat proved generally to be of good quality, although damage by smut was reported in some cases. Winter oats and early spring crops of barley were generally satisfactory, but on the whole crops were light. The quality of the oats was generally good. Beans and peas were both light crops. Potatoes had sprouted a good deal during the month, and the prospects of the yield had not improved. In most parts of the country the root crops benefited by the rains, but in the eastern districts where the rains were lighter there was but little improvement, and in those districts swedes were often suffering from mildew. Pastures also in the east and south-east of England were still short of grass at the end of the month but in the North and West there was plenty of keep in the fields. On the whole both cattle and sheep did better in August than in July. Hops ripened early, and in most places picking had begun by the end of the month. The crop proved to be of good quality but light, excepting in the western district, where was it up to average. Apples were everywhere a good crop but the fruits were smaller than usual. Pears were a very light crop and plums were practically a failure. Expressing an average crop by 100 the probable yields at the end of August were—wheat, 104; barley, 89; oats, 89; beans, 85; peas, 86; potatoes, 81; turnips and swedes, 70; mangolds, 82; and hops, 82.

September was dry except for the second week when good rains were experienced, greatly benefiting the pastures and roots. The corn harvest was completed by the middle of the month. The wheat was secured in good condition as a rule, but in the north some crops were damaged by rains. Winter oats were a good sample, but the quality of spring oats and barley was variable. The lifting of potatoes was well advanced in the south by the end of the month but in other parts of the country this work was only just beginning. The tubers were generally small but free from disease. Roots freshened up after the rains, but at the end of the month the prospects were still for light crops as a rule. Mangolds were expected to be from 25 to 30 per cent. below average, and turnips and swedes to be about 40 per cent. below. Mildew was general

among swedes, and in some districts the roots were rotting. Fairly large areas had been sown with catch crops, and these came up well in most districts but only to be checked by the dry weather at the end of the month. Apples were plentiful but the fruits were small, and apple rot was prevalent. Pears were scarce. The pastures improved with the rains, and in the north and west there were good supplies of grass, and cattle and sheep made good progress. In the eastern districts, however, though the pastures became green there was not much growth, and with the return of the dry weather they remained very short of grass. Many farmers were having still to cart water to the stock. Hill sheep were everywhere in good condition. Good progress was made with autumn cultivation, and by the end of the month this work was much more forward than usual for the time of year. In some districts fair breadths of winter oats and wheat had been sown, but as a rule farmers were waiting for more rain before sowing their corn.

October was a mild, dry month, and good progress was made with field work of all kinds. The weather was favourable for potato and root lifting and for the cleaning of the land, and there was enough rain in most districts to encourage the growth of grass and catch crops, though in some parts there was still a scarcity of water.

At the end of the month Autumn cultivation was well forward for the time of year, and as a whole the ground had worked well and good seed beds had been obtained. Most of the winter oats, beans and rye had been sown, and large areas of wheat had also been drilled. The lifting of the potato crop was approaching completion, but as a rule the tubers were small, and it was feared they would not keep well.

Mangolds were being pulled and a fair proportion had been carted; this crop had improved during the month, but as a rule the roots were small. Turnips made good growth during the month, but were still very small. Turnips and swedes had been badly attacked by mildew, and very few had been pulled by the end of the month. The mid-October rains benefited the catch-crops, which at the end of October were, in most cases, healthy and promising.

Seeds were variable in the north-west of England, and in parts of Wales there was usually a good, strong plant, but in most parts of the country crops were thin and many fields had had to be ploughed up. Cattle and sheep had done only moderately well in the eastern and south-eastern districts, where grass was still scarce, but in other parts of the country there was usually a good supply of grass and live stock did quite well.

THE NOBEL PRIZES.

THE NOBEL PRIZES (value about £7,000 each) were awarded in 1902 as follows:—*Physics*, Ch. E. Guillaume; *Chemistry* (reserved for 1903); *Medicine or Physiology*, A. Krogh; *Literature*, Knut Hamsun; *Preservation of Peace* (1902), Woodrow Wilson, (1900), Léon Bourgeois.

No awards for 1901 had been made at the date of going to press (Nov. 1, 1902), but it was understood that the *Literature* Prize for 1901 had been awarded to Anatole France. Awards for previous years will be found on p. 821 of the 1901 "WHITAKER." Particulars concerning conditions, &c., can be obtained from Nobel's Institute, Styrelse, Norrlandsgatan 6, Stockholm, Sweden.

(1926) November 9. "Red rain" at Mentone, Botanical Gardens covered with fine red sand. 15. Heavy rains and cold weather in Uruguay, causing great loss, 1,200 sheep lost in one establishment in 24 hours. Cyclone in Buenos Aires, several lives lost. 17. Violent gale in Denmark, causing much damage. 18. Cyclone in Sicily with loss of life; Palermo partly flooded. 23. Avalanche in the Valley of Aosta, forest buried.

December 13. Rain storm in New South Wales, said to be the worst for 70 years; damage to wheat crop estimated at £5,000,000. 14. Great storm in Japan, 29 vessels laden with coal and iron sunk at Kure. 20. Earthquake in Mendoza, Argentina, 400 lives lost. 26. Earthquake in Kansu, China, causing great loss of life and property, deaths estimated at 200,000, all houses within a radius of 75 miles destroyed. 29. Violent hurricane in Spain, three villages destroyed in Province of Oviedo. Strong winds and very severe frosts in the South of France, causing much damage to vegetation.

(1927) January 5. Storm on Portuguese coast, s.s. *Santa Isabel* wrecked off Salvara, near Vigo, with loss of 244 lives. 17. Earthquakes in Albania, deaths reported to exceed 30,000 in number, thousands of persons in need of shelter, food and clothing. 21. Floods in Holland, Marken, an island in the Zuider Zee, inundated. 24. Tornado in Budapest, four lives lost, hundreds of persons injured, great damage to property. 29. Tornado in coast district of Oregon, with gusts of wind up to 150 miles per hour, great damage done in the forests.

February 12. Hurricane in Fiji, causing tidal wave 4 ft. high. 16. Flood in Cadiz, causing loss of life and much damage to property. 20. Snowstorm in New York, the heaviest experienced for 20 years, railways and tramways blocked. 25. Heavy snow in Jerusalem.

March 2. Floods in South Australia, ports had to be closed and traffic on the Trans-Continental Railway was suspended. 20. Tornado in Ontario, two lives lost and much damage to property. Cloud-burst at Port Hope, 60 miles east of Toronto, causing damage to property estimated at £22,000. 16. Hurricane in the Hebrides, supply steamer unable to land food, people blown down and rolled over on the ground like wisps of straw. 21. Thunderstorm at Suva, Fiji, Government House fired by lightning and burned down.

April 15. Tornado in Southern Arkansas, causing great damage, 50 persons killed and hundreds wounded. 15-17. Severe frosts in Burgundy, doing great damage to the vineyards. 18. Cloud-burst and landslide in Java, 24 lives lost, 60 persons missing. 23. Sudden flood in the Tigris valley; river burst its banks and swept railway away in four places.

May 19. Shower of frogs at Gibraltar during a thunderstorm. 22. Floods in Murcia, Spain, doing much damage to crops. 31. Flood in Thuringia, with loss of 17 lives. Waterspout in the Douro province of Portugal, destroying four parishes and flooding the railways.

June 3. Cloud-burst in Colorado, city of Pueblo flooded, over 300 lives lost, damage to property estimated at £2,500,000. 4. Waterspout at Lille, France, causing damage estimated at £40,000 in a few minutes. 5. Second cloud-burst in Colorado, causing collapse of two water-dams in the hills and a further flood in Pueblo, thousands of acres of land under water, and the crops thereon ruined. 11. Floods in San

Salvador following a severe storm, great damage done. 21. Heavy rains in Japan, resulting in floods in Fukuoka district of Kinsui, 120 lives lost, thousands of houses flooded, many houses and bridges washed away. 25. Floods in India; Oudh railway breached near Amroha and engine and two third-class carriages disappeared with loss of over 40 lives. 29. Extraordinary thunderstorms in Canton Valais, Switzerland; pine trees fired by lightning. 30. Drought in Peru; maize crop expected to be 50 per cent. below average in consequence.

July 2. Cyclone in Sydney, New South Wales, doing much damage. Floods in north-west part of the Colony interrupting railway traffic. 6. Great heat in Ontario and Eastern Canada, much damage to crops and many forest fires. 9. Thunderstorms and very heavy rains in the Riviera. 12. Great heat in New York, five deaths reported as due to the heat. 16. Unprecedented heat in the Persian Gulf, temperature of 120° F. reported from Basra. 23. Forest fires in Fontainebleau, France, 1,200 acres of forest burned. 23. Great floods in New South Wales from Sydney to border of Queensland, causing loss of life and great damage to property. 26. Thunderstorm at Lannemezan, Hautes Pyrenes, lightning struck a family of four working in the fields and killed two. 31. Serious forest fires in France and Switzerland. Great heat wave in Venice, 20 deaths from sunstroke reported.

August 1. Abnormal rain and heavy floods at Atbara, Northern Sudan. 3. Cyclone at Montreux, Switzerland, much damage done and many yachts capsized. Severe gales and very cold weather in New South Wales and Victoria. 10. Cloud-burst at Taborton, State of New York, 8 ins. of rain fell in two hours. 16. Severe thunderstorm and heavy rain in Bavaria and Wurtemberg, causing great damage to property, hail lay in places to a depth of 12 ins.

September 8-10. Blizzard in South Africa; Pietermaritzburg cut off from the North both by railway, telegraph and telephone. 10. Flood at San Antonio, Texas; river rose 12 ft. in five hours, houses flooded and 2,000 persons rendered homeless, deaths estimated at 250, and damage at £2,500,000. 11. Violent gale in Brussels; trees uprooted and much damage done to property. 12. Heavy rain and snow in Saskatchewan, stopping harvest operations, temperature fell to 20° F. 13. Heavy gale in Calais, causing loss of life and great damage. 18. Serious floods in France; at Correze bridges were carried away, mills destroyed and farm stock drowned; in Briva the damage done was estimated at several million francs. 19. Floods in Andalusia; 12 lives lost, much damage to property, including drowning of 300 sheep. 21. Flood in Lisbon with loss of life; people swept by the water into the sewers. 22. Very heavy rain and hail in Rome, water 5 ft. deep in the streets. 24. Cyclone in Syracuse; all the vessels in harbour broke from their moorings and two sank. 28. Typhoon in Hondo, Japan, resulting in landslides and floods; hundreds of houses destroyed, much loss of life feared. 30. Severe storm in Ontario and Quebec, causing great damage to property.

October 7. "Water pocket" in the Gruben Glacier burst, destroying several chalets and cutting the Grimsel road near Handeck (Canton of Berne). 10. Serious drought in Belgium. 11. Severe storm in the Hérault, France, houses wrecked, trees uprooted, lower part of Montagnac

flooded. 22. *Andalusian* spate on the Shahur River, *Waziristan*, India, 21 soldiers carried away while crossing the stream. 23. Heavy storms on the coasts of Holland and Denmark, lifeboat capsized and crews drowned, many wrecks, low-lying parts of ports flooded. 24. Cyclone in Florence doing much damage to property. 25. Railway bridge near Sant Euphemis, Italy, collapsed owing to heavy

rains, express engine with tender and postal office fell into river. 26. Storm in Florida, sea houses wrecked at Tampa, damage estimated at £500,000. Very heavy rains in Naples, lower part of the city flooded, Vesuvius railway interrupted, while near the top of Vesuvius a gulf had opened half-a-mile in width and half-a-mile deep. 28. Severe gale on Valencia Coast of Spain.

SHAKESPEARE AND STRATFORD-ON-AVON.

SHAKESPEARE (1564-1616), though uncanonised, is mainly England's patron saint. Over 200,000 visitors, from all climes and countries, yearly visit this literary shrine. High Street still appears mediæval, and many oak-timbered houses attest the town's great age and dignity. This historic heart of England fitly preserves Britain's storied and stately past. Next to the Bible, Shakespeare's works, projected by Wm. Jaggard, 1623, forms the highest literary treasure, intrinsic and extrinsic, yet produced by England. The volume has been translated into almost every language and dialect.

Shakespeare's Birthplace (April 23, 1564), at Stratford-on-Avon, has been for over 200 years the goal of pilgrims. It was bought for £3,100 in 1847 and given to the nation. (Restored in 1857.) Managed by 26 Trustees (16 *ex-officio*). Holds library of rare editions, pictures, and relics. In the garden are many trees and plants named by the poet.

Clopton Bridge, built of stone, on 19 arches, about 1490 by Sir Hugh Clopton, Stratford native, and Lord Mayor of London.

Guild Chapel and Guildhall.—Built A.D. 1296. In the old hall young Shakespeare could witness strolling companies performing (mentioned in Records). In chapel were discovered beneath whitewash, 1804, mural allegorical paintings, done by mediæval priests.

Hall's Croft.—Unaltered old-timbered residence of Susanna, poet's daughter, wife of Dr. John Hall, churchwarden and poet's executor.

Harvard House.—Built 1596 by Alderman Thomas Rogers, whose descendant (John Harvard) founded Harvard University, U.S.A.

Hathaway Cottage.—At Shottery, one mile from Stratford, is the little thatched farmstead, the undisturbed birthplace of Anne Shakespeare, poet's wife, who bore him three children, Susanna, Hamnet, and Judith. Contains curious Tudor and Jacobean furniture. National property, controlled by Birthplace Trustees.

King Edward VI. School.—Founded by Thomas Jollyffe, priest, in Henry VI. reign; incorporated by Edward VI. Here Shakespeare acquired his "little Latin, less Greek," and matchless English.

The Shakespeare Memorial.—Mainly due to munificence of C. E. Flower (1830-92) and his wife. Group comprises *Library*, with 20,000 volumes of Shakespeare editions and ana including rare Wm. Jaggard collection, printed about 1800 by the poet's chosen publisher. His descendant, Capt. W. Jaggard (Curator of the Memorial Library) issued in 1911 an English Bibliography of Shakespeare, recording 37,000 entries, of which the largest extant collection is at Birmingham. *Gallery* of pictures (including unique "Droeshout" portrait). *Museum* of antiques and relics (including Irving collection). *Lecture Rooms*. *Tower*, affording views of 30

miles. *Gardens*, and *Statuary* (Lord Ronald Gower's gift). *Theatre* (800 seats) holding recurring festivals of the poet's dramas with varying programme daily. Recently nine different plays were given in six days. Special celebrations and performances with floral procession to tomb, mark the birthday, April 23, each year.

New Place.—Site of the poet's retirement. Shakespeare bought this estate in 1597; retired to it about 1610; died there April 23, 1616. House was rebuilt about 1700, and demolished by Francis Gastrell, the iconoclast, 1759.

The Cage.—For 36 years the home of Judith, poet's younger daughter, who married Thomas Quiney, vintner.

Town Hall.—Erected 1633; rebuilt 1792. Contains details of the unbroken sequence of Bailiffs and Mayors since A.D. 1292 (including the poet's father, John Shakespeare). Exhibits: Gainsborough portrait of Garrick; four Corporation Maces, gilt silver of 15-16th Century, and ancient Corporate Sword.

Trinity Church.—Dates from A.D. 692. Of cathedral-like proportions. Shelters remains of poet and family.

THE LONDON FIRE BRIGADE.

Headquarters: 94 Southwark Bridge Rd., S.E. 1.

Under the Local Government Act, 1888, the London County Council assumed control of the Metropolitan Fire Brigade, and in 1904 the title was altered to "London Fire Brigade."

On 31st October, 1921, the complement of the Brigade consisted of:—1 chief officer; a divisional officers; a assistant divisional officers; and 1,908 officers, firemen, and pilots; an administrative, technical and clerical staff of 167, and an ambulance service staff of 96. There were 64 land fire-stations, 6 ambulance stations, 3 river stations; and the appliances included 87 motor fire-engines, 80 motor fire-escapes, 6 motor lorries, 4 electrically driven turntable long ladders, a petrol-electric motor ladders, 5 long ladders, 36 smoke helmets, 85 hose carts, 4 fire-floats, and 4 store barges, 15 motor-cars, and 9 motor ambulances. There were 2 horses and 70 miles of hose in use by the Brigade. The fire-alarms distributed over London numbered 1,612. The number of calls to which the Brigade responded during the year ended 31st December, 1920, totalled 6,534, and the fires numbered 3,474, of which 58 were classed as "serious."

Chief Officer, A. R. Dyer, A.M.I.C.E. (with certain allowances) £1,400

Divisional Officers, Major Cyril C. E. Morris, M.C.; Commr. Aylmer N. G. Firebrace, R.E.

Assistant Divisional Officers, Major Frank W. Jackson, R.E.O.; Capt. Brynmor Jones, M.C.

Opera.—Although Covent Garden omitted to celebrate the return to the piping times of peace by giving the customary "grand season," there has, fortunately, been no lack of operatic enterprises. The famous Royal Opera Syndicate of former years exchanged activity for passiveness; but the Carl Rosa Company gave an interesting winter season of eight weeks, during which a well-varied repertoire was much enjoyed, the price of admission being extremely moderate. The changes were rung on Wagner, Puccini, Verdi, Gounod, Mozart, Bizet and other composers upon whom London has set its affections, and the artists included several of unusual capability. Good, too, was the *ensemble*, for which the Carl Rosa has long been famous.

The series of performances of "*Opéra Intime*," engineered by Mr. Rosing, and which took place earlier in the year at Aeolian Hall, also were worth attention. Mr. Rosing's argument is that certain works lose by being given in a large theatre, and that they originally were intended to be performed in the *salon* of some musical *Mecenas*. It was, however, a mistake to have "presented" "*Il Barbiere*" in English, and with a company which seemed to be ill at ease on the stage. The opera in question is one which demands *coloratura* singers who are both vocally and dramatically capable, while the *libretto* emphatically does not lend itself to translation, and particularly to the poor translation which was used. It is faults such as the above which play havoc with the cause of opera in English; indeed, one is astonished at an *impreario* of Mr. Rosing's intelligence permitting so ineffective a representation. A better choice was Mozart's infantile effort, "*Bastien et Bastienne*," and "*I Pagliacci*."

Various new works have been produced during the year, and a few of them justified the experiment. Mr. Montague Phillips, for example, in "*The Rebel Maid*," which was tried at the Empire, shows a feeling for musicianship, and he is tuneful without descending to plagiarism or banality. A further acquaintance, in fact, with Mr. Phillips' muse would be profitable, since he undoubtedly has made a good beginning. Another light opera, Mr. Nicholas Gatty's "*Prince Feron*" (which was produced at the Old Vic.), also justified its production. The music is full of variety; it generally is effective; and, what is of equal importance, the subject always is appropriately illustrated. Less convincing, but infinitely more ambitious, is Mr. Rutland Boughton's "*The Immortal Hour*." A German critic, who, like his trade in England, has described the opera as a "masterpiece that sooner or later will figure prominently in musical history," "a lovely noise of myriad leaves."

The best that can be said for the score is that the balance between the voice-parts and the orchestra is fairly well maintained; that the melodies are fresh and more or less inspired; and that a certain amount of agreeable individuality is displayed. But it is to be feared that the immortality of "*The Immortal Hour*" will not travel beyond the title.

Mr. Gustav Holst's "*Savitri*," another of the new operas, though an unpretentious trifle, has much to recommend it. There is a welcome delicacy about the music, a well-considered originality, and a sense of the fitness of things, while the vocal line is never anything but vocal. The composer is modest of the *madrigals*; but, unlike most of his kind, he avoids the boring and

the *dissonance*. There are moments when "*Savitri*" is as advanced as "*Elektra*,"—there are some when it is as dull. The story is of the slightest. Death appears in person to an Indian wood-cutter and his wife, and grants the boon which has been asked. It is, however, made interesting by the composer.

There remains "*The Beggar's Opera*," which has enjoyed a long and prosperous run. An "obstinate success," as Tree, the wit, said of "*Henry VIII.*" at His Majesty's. It still plays to good business. And the performance undoubtedly is a satisfactory one.

London Concerts.—To London concerts there has, as usual, been no end, and it is to be feared that some of them enriched none but the concert agents whose persuasive eloquence resulted in their being given. Inept beginners (would-be singers predominating) have tempted fate nearly every week, appearing before the customary "paper" audience. A few of them were assured by equally inept critics that they are destined to achieve greatness; better-informed scribes chided the rash intruders or passed their recitals by. Happily, the instrumentalists gave a far better account of themselves, several of the pianists, violinists and cellists possessing an excellent technique. A percentage of the newcomers owe their instruction to one or other of the various music schools, where, if results are any criterion, the instrumental teaching is far in advance of the department to which voices are handed over. Some of the singers, to avoid the harm which results from inferior teaching, had their voices "placed" abroad. Judging from their performances quacks are not unknown on the Continent.

As memorable as any was the recital given by Mr. John Coates, the programme being devoted to old English ditties. Henry the Eighth's "Pastyme with good companye," Morley's "It was a lover and his lass," Ford's unforgettable "Since first I saw your face," as also "My lytell pretty one" (*tempore* Henry VI.), were included in a programme of rare value. Mr. Harold Samuel, a Bach player of considerable merit, gave seven extremely successful pianoforte recitals; at one of Mr. Edward Clark's orchestral concerts Señor Manuel de Falla played the pianoforte part in his own "*Nights in the Gardens of Spain*," his sense of rhythm being remarkable; and the rather over-rated "Prometheus" of Scriabine was performed at a Kusevitsky orchestral concert. Miss Winifred Christie, a pianist who, like Phyllis, "never fails to please," was heard upon various occasions; Miss Fanny Davies maintained her reputation as a Schumann player; and Mr. Toscha Seidel a violinist of exceptional merit, was acclaimed by the *cognoscenti*, of whom, alas! there are none too many. Mr. Boris Hambourg, the cellist, who had not been heard in London for some time, showed improvement, and Mr. Mark Hambourg remains a very powerful, if not a wholly satisfying, pianist. Mr. Kreisler gave four concerts in a fortnight, the hall being sold out on each occasion; while Mr. Moscatowitch played with all his old fascination and fine style. Welcome, too, was the vocal recital given by Miss Maria van Dreesse, the finish of whose singing is a thing to remember with pleasure. Equally favourable was the impression made by Miss Winifred Jenner, a Canadian mezzo-soprano, for she used her voice with more than ordinary skill.

Mr. Rogers, the Paris organist, gave very good

successful recitals at the Albert Hall and elsewhere, though the competent critics found his Bach *tempi* too slow and his lapses into *rubato* a little irritating. Madame Melba also fell foul of enlightened people, for it was argued that she did wrong to include in her Albert Hall programme Tosti's "Goodbye," "Annie Laurie," and a most foolishly-conceived American effusion entitled "By the Waters of Minnetonka." As Madame Melba has retained much of her voice and all her art, that she should have sung these things is to be regretted.

The Provinces.—The Provinces, as ever, have supported opera. In Birmingham, for example, the Repertory Theatre management promoted a month's season, during which Cimarosa's rarely-heard "Il Matrimonio Segreto," Donizetti's vivacious "Don Pasquale," and Mozart's "Così fan Tutte," drew good houses. The Carl Rosa Company filled engagements throughout the kingdom, paying many a return visit, and the O'Mara Company was well received, particularly in Dublin, where the season lasted four weeks. Mr. O'Mara offered his supporters their choice of works which are to be taken seriously, and "Maritana" and "The Lily of Killarney," with the lamentable result that Vincent Wallace and Benedict were preferred. Mr. Hedmond, who has so long and so worthily been associated with the lyric stage, gave a week of opera in Edinburgh, the talent being entirely local. "Il Trovatore," "I Pagliacci" and "Cavalleria Rusticana" formed the *répertoire*, and, all things considered, the performances were creditable.

Mr. Dupré, having made a success in London, tried conclusions with the Liverpool St. George's Hall organ, extracting from the instrument unexpected combinations of tone-colour. The

"discovery" appears to have astonished some of the organist listeners, which "gives one to think. . . ." Manchester, living up to its reputation, resuscitated old works of value and introduced new ones; Bristol afforded hospitality to Mr. Dupré; Portsmouth was enlivened by the efforts of several military bands of note; while the Portsmouth Male Voice Choir, which has been in existence but two years, passed its sixtieth concert. The Belfast Philharmonic Society, having given Berlioz's version of the Faust legend, turned its attention to a concert performance of Gounod's opera; and Mr. Godfrey and his Municipal Orchestra again earned the encomiums of all Bournemouth. Brighton has been indebted to its orchestra, a feature of the season having been Giovanni Clerici's tone-poem "Armida," an atmospheric work, the *finale* of which is most admirably worked up. There is a dignity and a restraint about "Armida" and a line of melody which is allowed a discreet amount of latitude. The usual festivals took place, various new works obtaining favourable criticisms. It is, however, doubtful if any of these additions to the modern *répertoire* have long lives before them. Musicians they may be, but, alas! none too musical.

The provinces have produced a percentage of young singers for whom the future should hold prizes. Amongst them is Miss Constance Ireson, a mezzo-soprano, whose fresh, sympathetic voice has a peculiarly arresting quality, while her singing is without effort, a *trait* upon which she is to be congratulated. Mention also may be made of Mr. Eric Greenwood, the quality of whose promising voice lies between bass-baritone and baritone.

GEORGE CECIL.

Art in 1921.

At the Royal Academy the exhibition of works by Spanish artists, ancient and modern, which was opened in November, 1920, remained on view for some time after the beginning of the New Year, and attracted many visitors, although the pictures collectively failed to realise the expectations that had been aroused. There was no Old Master exhibition at the Academy.

The summer exhibition was the smallest ever held at Burlington House. The Selecting Committee of the Royal Academy was composed almost entirely of men who had been elected to membership in recent years, and included several Associates, and with the idea of attempting to raise the standard of the exhibition they decided to reduce its size. About 9,500 works of art of various kinds were submitted to their judgment by non-members, and of these places were found for only 1,000, a reduction of 85% from the figures of 1920, although the exhibition of that year was very much smaller than most of its predecessors held in the same galleries. The Selection Committee was composed of the President, (Sir Aston Webb), Mr. Adrian Stokes, Mr. D. Y. Cameron, Mr. H. Hughes-Stanton, Mr. Derwent Wood, Mr. Charles Sims, Mr. Arnesby Brown, Mr. Melton Fisher, Mr. Bertram Mackennal, Mr. G. G. Scott, Mr. C. A. Shepperson, and Sir E. L. Lutyens. All of these, with the exception of the President, Mr. Hughes-Stanton, and Mr. Scott, served on the Hanging Committee.

In reducing the number of exhibited works the Academy was obliged to refuse pictures by

artists who had for years been prominently represented at Burlington House, and with these a great deal of sympathy was expressed in the correspondence in newspapers that followed the opening of the exhibition in May. A special exhibition was organised at the Guildhall Gallery, composed of rejected pictures by well-known painters. Only one Chantrey picture was purchased, a small landscape by Mr. Bertram Nicholls, No. 375, "Drying the Sails," priced at £20. The popular picture of a cook, by Sir William Orpen, No. 115, "Le Chef de l'Hôtel Chatham, Paris," had also been chosen for the Chantrey collection, but proved to be ineligible, as some of the work in connection with it had been done abroad. Sir William therefore presented it to the Academy as his diploma picture.

Sales at the exhibition were fewer than in 1920, partly on account of the general depression in trade, and partly because of the reduced number of works shown. Those that found purchasers included "In the Dunes" (£250), by Mr. Adrian Stokes; "Golden Evening: Campo, Lake Como" (£200), by Mr. J. Walter West; "The Waveney Marshes" (£300), and "The Coast Road" (£300), by Mr. Arnesby Brown; "A Provencal Farmhouse" (£250), "A Provencal Trout Stream" (£250), "A Spanish Mill" (£200), and "Eel Spearing in Provence" (£200), by Mr. H. H. La Thangue; "Still Life" (£200), by Mr. Meredith Frampton; "The Fringe of the Pine Wood," "An Autumn Evening," "The Bay of Aberdovey," and "Moel Siabod" by Mr. B.

W. Leader: "Interior of a Studio" (£300), by Mr. Patrick W. Adam; "In the Lamplight" (£300), by Mr. Charles D. Ward; "On the Shore at Eastworth" (£350), by Mr. Mark Fisher; "A Girl of the Hills, Veneto" (£350), and "At San Giorgio Maggiore, Venice" (£350), by Mr. Henry Woods; "Interior with Figure" (£300), by Mr. L. Campbell Taylor; "La Penserosa" (£350), by Mr. Frank Dicksee; "Flying Clouds" (£350), by Mr. Arthur Friedenson; "Tollers of the Shore" (£300), by Miss A. Des Claves; "Atlantic Breakers: Machrihanish Bay" by Mr. Robert W. Allan; "Under the Pergola" by Mr. Joseph Farquharson; "The Revivalists" (£300), by Mr. W. R. S. Stott; and "Dawn-head, marble" (£325), by Mr. W. Reid Dick.

A reduction of the number of free days was the principal, and a most unfortunate, event of the year at the National Gallery, where, however, several new pictures were placed on view. They included Millais' well-known portrait of Mrs. Jopling-Rowe, which was presented to the Gallery by her son; a very good Lely, a three-quarter length portrait of Van Helmont; and a pastel of a girl with a cat by J. B. Perronneau, presented by Sir Joseph Duveen. Sir Philip Sassoon lent for exhibition a characteristic example of the French 18th century painter De Troy, "A Reading from Molière," at the National Gallery of British Art, Millbank, the early English paintings, removed from Trafalgar Square in the preceding year, were still on view; and several of the rooms were re-opened to display numbers of pictures and drawings, many of which represented the ultra-modern school. The most important acquisition of the year was the early-Millais, commonly known as "The Carpenter's Shop." This picture, one of the finest examples of the English pre-Raphaelite school, had been lent for some years to the Gallery by the trustees of the lady to whom it belonged. Last year they wished to dispose of "The Carpenter's Shop," and the Melbourne Gallery was prepared to buy it; but it was preserved for England by the indefatigable efforts of the Committee of the National Art Collections Fund, which acquired the picture for £10,000. An interesting exhibition of drawings by foreign and British Old Masters was opened at the Victoria and Albert Museum. A fine bust by Bernini was bought for the Museum in the summer.

American art was prominent at the exhibitions of the year. Three sculptors from America showed collections of their work, Mrs. Payne Whitney at McLean's; Mr. Herbert Haseltine at Agnew's; and Mr. Paul Manhip at the Leicester Galleries. An exhibition of pictures by American artists was held at the Grafton Galleries, but with small success. A new gallery, the "Cotswold," was opened in Frith Street, Soho, in October. The Grosvenor Gallery, which had been closed for some time, was re-opened with a "nameless" exhibition organised by the *Burlington Magazine*, at which the work of well-known artists was shown for some weeks anonymously; Mr. A. J. Mannings showed country pictures and equestrian portraits at the Alpine Club Gallery, where Messrs. Chaplin held an exhibition of modern art in the spring, and a notable collection of specimens of ancient Egyptian art was on view at the Burlington Fine Arts Club.

The famous pastoral by Bastien-Lepage, "Gathering Potatoes," was one of the attrac-

tions at the summer exhibition at the Burlington Gallery, and the many shows at the Leicester Galleries included those of Arab portraits by Mr. Eric Kennington, caricatures of Rossetti and others by Mr. Max Beerbohm, water-colours by Francis E. James, paintings and drawings by Picasso, and works of various kinds by Messrs. Lee Hankey, Wyndham Lewis and Nevins. Several attractive exhibitions of modern paintings were held at the Goupil Galleries, and at the rooms of the Fine Art Society, and the first exhibition of the New Society of Artists was given in Suffolk Street. Other events of interest were the unveiling of Mr. Mackenna's statue of Edward VII. in Pall Mall, and that of Washington, by Houdon, in Trafalgar Square, and the celebration of the centenary of the death of Crome, the landscape painter.

In the auction room the season was exceptionally quiet. No great collections and few fine individual works of art came under the hammer in 1921. At the Clavering sale at Christie's, Romney's "Clavering Children" fetched £5,250, and the same artist's portrait of Lady Napier, £3,150. A portrait of Miss Vansittart, by Sir Joshua, realised £3,350; a version of Hogarth's "Scuse from the Beggar's Opera," £1,470; a "Family Group," by Nicholas Maes, £3,150; and a portrait of Queen Elizabeth, by Marcus Gheeraerts the younger, £2,950. Among modern pictures, Alma Tadema's "Apodyterium" was sold for £1,071, and a study by Mr. Sargent, "Lady and Little Boy asleep under a Willow," for £210; but the late Sir Edward Poynter's large "Israel in Egypt," a sensational work in its time, was knocked down at a hundred guineas. French and English 18th century furniture was sold for good but not remarkable prices; a Louis Quinze table for £3,150, a Chippendale commode, £3,900, and two Chippendale suites for £3,825 and £3,225 respectively. At the Duke of Newcastle's sale of enamels, silver, &c., £2,415 was paid for an oval dish of Limoges enamel, £2,500 for a Gubbio dish, and £3,225 for a Castel Durante bowl; and at a sale of property from Wilton House, held at Sotheby's, a 16th century suit of armour, made for the second Earl of Pembroke, realised £25,000.

"The Tragic Muse" by Sir Joshua Reynolds, which was offered at Christie's in 1920 and failed to reach the reserve price, and Gainsborough's "Blue Boy," both the property of the Duke of Westminster, and two of the most famous of English pictures, were sold together in October for £200,000 to Sir Joseph Duveen.

RESEARCH ASSOCIATIONS.

RESEARCH Associations are voluntary associations of British manufacturers for the systematic application of scientific research to problems in industry. In constitution they are non-profit-sharing companies limited by the guarantee of a nominal sum. Firms in an industry which are engaged in the production of similar articles, or less frequently firms in different industries which make use of the same or similar raw or semi-manufactured materials, combine in this way to improve these articles or materials, or discover new processes or to increase the efficiency of existing processes for the benefit of all British firms in the industry contributing to the common fund on an agreed scale.

THE most notable production of the year was the first play of a new dramatist. In *A Bill of Divorcement*, which enjoyed a run of some eight months at the St. Martin's Theatre, Miss Clemence Dane dealt boldly with one phase of the problem of unhappy marriages, and at once took her place among the leading British playwrights. Other interesting productions of the year were *The Betrothal*, Maurice Maeterlinck's sequel to *The Blue Bird*; *If*, a fantastic play by Lord Dunsany; and *Heartbreak House*, George Bernard Shaw's play.

The record run of *Chu Chin Chow* came to an end after 2,238 performances, and *Cairo* took its place. The only play that attracted audiences throughout the year was *Paddy the Next Best Thing*, a version of the novel of Miss Gertrude Page, who scored a second popular success with *The Edge of Beyond*. John Drinkwater's striking play *Abraham Lincoln* was brought to the West End from the suburbs, and confirmed its success. Sir John Martin Harvey made his first appearance since he received a knighthood, and Madame Sarah Bernhardt played in *Daniel*, an English version of which was also produced. John Galsworthy, Somerset Maugham, H. A. Vachell, and Sir James Barrie were also represented, the latter by revivals only, while there were several Shakespearian productions.

The following is a list of the principal London productions of the year:—

ADELPHI.—Oct. 5, 1921. *The Golden Moth*, a musical play by Fred Thompson and P. G. Wodehouse, with music by Ivor Novello (Messrs. W. H. Berry, Thorpe Bates, Fred Maguire, and Robert Michaels, and Mesdames Nancie Lovat and Cicely Debenham).

ALDWYCH.—Nov. 2, 1920. *Macbeth*, revival (Messrs. James K. Hackett, Leslie Faber, William Lugg, and H. R. Hignett, and Mrs. Patrick Campbell). Nov. 30. *The Dragon*, a drama by R. E. Jeffery (Messrs. Lewin Manninger, Larva Penna, and John Astley, and Mesdames Christine Silver and Gertrude Sterroll). Dec. 21. *The Private Secretary*, Charles Hawtrey's farcical comedy revived (Messrs. Lytton Grey and Fred Lewis, and Mesdames Dora Gregory, Eva Trezise, and Nadine March). Feb. 1, 1921. *The Tempest*, revived (Messrs. Henry Ainley, Louis Calvert, Ambrose Manning, Francis Lister, Herbert Ross, and H. A. Saintsbury, and Mesdames Viola Tree, Winifred Barnes, and Joyce Carey). April 8. *Olivia*, the play by W. G. Wills based on "The Vicar of Wakefield" revived (Messrs. Norman Forbes, Cowley Wright, and Howard Rose, and Mesdames Gladys Cooper, Viola Tree, and Mary Rorke). April 30. *Love Among the Paint Pots*, a light comedy by Gertrude Jennings (Messrs. Owen Nares, Roy Byford, J. H. Roberts, and Edward Rigby, and Mesdames Sydney Fairbrother, Mary Brough, Dora Gregory, and Joan Maclean). May 30. *The First and the Last*, by John Galsworthy (Messrs. Owen Nares and Malcolm Keen, and Miss Meggie Albanesi), and *The New Morality*, Harold Chaplin's play revived (Messrs. J. H. Roberts, Aubrey Smith, and Athole Stewart, and Miss Kate Cutler). July 4. *James the Less*, a comedy by A. C. Castell (Messrs. Owen Nares, M. R. Morand, Athol Forde, and J. H. Roberts, and Mesdames Mary Rorke and Joan Maclean). Aug. 24. *The Legion of Honour*, melodrama by Baroness Orczy (Messrs. Basil Gill, Ivan Berlyn, Claud Rains, and William Lugg, and Mesdames Mary Rorke and Gwendoline Hay).

ALHAMBRA.—March 7, 1921. *Robey-en-Casse-rolle*, by Jack Waller (Messrs. George Robey, Jack Waller, Wyllie Watson, and Charles Hawthorne, and Mesdames Pat O'Connor and Gwen Lawrie).

AMBASSADORS.—Feb. 7, 1921. *Moleskin Joe*, a play by Patrick MacGill (Messrs. Henry Caine, Caleb Porter, and William Armstrong, and Mesdames Catherine Lagh and Helen MacGregory). March 14. *The Human Touch*, by Leonard Compton-Rickett (Messrs. C. V. France, Franklin Dyll, and Arthur Vezin, and Miss Enid Sass). March 21. *Rhoda Fleming*, adapted from George Meredith's novel by A. Philipson (Messrs. William Armstrong, Bruce Winston, Allan Jeayes, and Ivor Barnard, and Mesdames Moyna Macgill, Dorothy Massingham, and Clare Greet). April 25. *Mother Eve*, a comedy by F. C. Montagu (Messrs. Allan Jeayes, Athol Forde, and Ivor Barnard, and Mesdames Mary Merrall, Edith Evans, and Ruth MacKay). May 30. *If*, a fantastic play by Lord Dunsany (Messrs. Henry Ainley, Michael Sherbrooke, Henry Caine, J. H. Twyford, and Bruce Winston, and Mesdames Gladys Cooper and Marda Vanne).

APOLLO.—Dec. 23, 1920. *Where the Rainbow Ends*, children's play revived (Messrs. Clifton Alderson, Henry Kendall, Hylton Allen, Charles Groves, and George de Warfaz, and Mesdames Eileen Orton, Monica Morgan, and Dorothy Secker). March 24, 1921. "Don Q," romantic drama by H. Hesketh Prichard (Messrs. F. J. Nettlefold, William Stack, Sebastian Smith, and Henry Bedford, and Miss Dorothy Dix and Mrs. Nettlefold). July 30. *Skittles*, comedy by Lechmere Worrall and Arthur Rose (Messrs. Horace Hodges, Geoffrey Kerr, and D. A. Clarke-Smith, and Mesdames Helen Ferrers, Ailsa Grahame, and Alice Bowes). Sept. 21. *Crooked Usage*, a play by Stanley Cooke (Messrs. Ambrose Manning and F. J. Nettlefold, and Mesdames Mary Brough, Frances Wetherall, and Maud Nettlefold). Sept. 30. *The Bluebeard Touch*, a phantasy by Alma Faulkner and Oswald T. Curtis, produced by Playwrights' Theatre (Messrs. William Armstrong, Laurence Hanray, John Clifford, and Eric Morgan, and Miss Iris Hoxey).

COMEDY.—Nov. 16, 1920. *Will You Kiss Me*, a comedy by Cyril Harcourt, founded upon American novel "Too Much Efficiency" (Messrs. Donald Calthorp, C. V. France, and Arthur Wellesley, and Mesdames Marjorie Gordon, Ann Trevor, and Mary Brough). Nov. 29. *The New Morality*, comedy by the late Harold Chaplin, produced by the Play Actors (Messrs. Frederick Worlock, J. H. Roberts, Robert Horton, and Arthur Cullin, and Mesdames Athene Seyler, Mira Kenham, and Vera Cunningham). Dec. 23. *The Charm School*, a comedy by Alice Duer Miller and Robert Milton (Messrs. Owen Nares, David Miller, Kenneth Kent, and Fawless Llewellyn, and Mesdames Meggie Albanesi, Lena Halliday, and Sydney Fairbrother). March 9. *The Ninth Earl*, a drama by Rudolf Besler and May Edgington (Messrs. Norman McKinnel, Halliwell Hobbes, James Lindsay, Louis Goodrich, and D. A. Clarke-Smith, and Mesdames Mabel Terry-Lewis, Frances Wetherall, and Jessie Winter). March 21. *Three*, a comedy by W. P. Lipscomb, produced by the Play Actors (Messrs. Leslie Faber and Henry Oscar, and Miss Alexandra Carlisle). April 27. *A Matter of Fact*, a comedy by Ernest Cecil (Messrs. Norman McKinnel and Francis Lister, and Mesdames Eva Moore, Auriol Lee, and Doria Lytton). June 2. *A Family Man*, a comedy by John

Galsworthy (Messrs. Norman McKinnel, D. A. Clarke-Smith, and Laurence Hanray, and Mesdames Mary Barton, Sibell Archdale, Agatha Kentish, and Auriol Lee). *July 11. The Parish Watchmen*, a comedy by "Trebor Hare," produced by the Play Actors (Messrs. Athole Stewart, Fewlass Llewellyn, and Sebastian Smith, and Miss Mabel Terry-Lewis). *July 29. By All Means, Darling*, a farce by V. Sutton Vane (Messrs. J. H. Roberts and J. V. Bryant, and Mesdames Marie Hemingway and Kate Cutler). *Sept. 6. The Love Thief*, a melodrama adapted by C. B. Fernald from the Italian play "La Cena Delle Baffe" by Sam Benelli (Messrs. Norman McKinnel, Ernest Theisger, and Halliwell Hobbes, and Mesdames Cathleen Nesbitt and Dorothy Holmes-Gore). *Oct. 21. Araminta Arrives*, a comedy by J. C. Snaith and Dor. 17 Brandon (Messrs. Lyall Swete, Roy Byford, and W. Cronin Wilson, and Mesdames Margaret Halstan and Eileen Beldon, and Lady Tree).

COUET.—*Dec. 4, 1920. A Midsummer Night's Dream*, produced by J. B. Fagan (Messrs. Alfred Clark, Miles Malleison, H. O. Nicholson, William Armstrong, George Desmond, Ivan Samson, and Terence O'Brien, and Mesdames Mary Grey, Leah Bateman, Iris Hawkins, and Elizabeth Irving). *Feb. 17, 1921. King Henry IV. (Part II)* (Messrs. Basil Rathbone, Alfred Clark, H. O. Nicholson, Moffat Johnston, and Eugene Leahy, and Mesdames Leah Bateman, Mary Grey, and Margaret Yarde). *April 21. Othello* (Messrs. Godfrey Tearle, Basil Rathbone, Frank Cellier, and Eric Cowley, and Mesdames Madge Titheradge and Mary Grey). *June 30. Mr. Malatesta*, a comedy-drama by William Ricciardi (Messrs. Ricciardi, Nat Madison, and Bessie O'Rourke, and Miss Marguerite Sciattiel). *July 23. The Playboy of the Western World*, J. M. Synge's play revived (Messrs. Fred O'Donovan, Sydney Morgan, and Arthur Sinclair, and Mesdames Maile O'Neill and Sara Allgood). *Sept. 9. John Bull's Other Island*, Bernard Shaw's comedy revived (Messrs. Alfred Clark, Fred O'Donovan, H. O. Nicholson, and James Dale, and Miss Ellen O'Malley). *Oct. 18. Heartbreak House*, by Bernard Shaw (Messrs. Brember Willis, H. O. Nicholson, Charles Groves, and Alfred Clark, and Mesdames Edith Evans, Mary Grey, and Ellen O'Malley).

CRITERION.—*Nov. 26, 1920. Shortage*, a comedy by Wilfred T. Coleby (Messrs. Leslie J. Banks and Frank Macey, and Mesdames Doreen Whitten and Hilda Sims). *March 26, 1921. Grumpy*, by Horace Hodges and Wigney Percival, revived (Messrs. Cyril Maude, James Dale, Arthur Whitby, and Drellincourt Odum, and Miss Ann Trevor). *July 19. Ambrose Applejohn's Adventure*, a comedy by Walter Hackett (Messrs. Charles Hawtrej, Leslie Faber, and Edward Rigby, and Mesdames Hilda Moore, Marlon Lorne, and Mona Harrison).

DAILY.—*Feb. 19, 1921. Sybil*, a musical comedy by Harry Graham, with music by Victor Jacoby (Messrs. Huntley Wright, Harry Welchman, Leonard MacKay, and Noel Leyland, and Mesdames José Collins, Jean Stirling, and May Beatty).

DUKE OF YORK'S.—*Dec. 10, 1920. When Knights were Bold*, Charles Marlowe's farce revived (Messrs. Bromley Challenor, Sam Wilkinson, Dennis Wyndham, and Sydney Paxton, and Miss Madge Compton). *Dec. 27. Teddy Test*, children's play by Charles Folkard, with music by Frederic Norton (Messrs. Herman de Lange,

Cecil Woodings, and Frank Denton, and Mesdames Iris Hoey, Ada Palmer, and Marjorie Wilson). *Jan. 24, 1921. Lonely Lady*, a comedy by Nita Paydon (Messrs. Lauderdale Maitland, Robert Horton, and Arthur Wellesley, and Lord Lyveden, and Mesdames Gertrude Elliott, Winifred McCarthy, and Maud Buchanan). *Feb. 24. Miss Nell o' New Orleans*, a comedy by Laurence Eyre (Messrs. C. M. Hallard, Leslie Faber, and Jack Hobbs, and Mesdames Irene Vanbrugh, Helen Spencer, and Barbara Gott). *May 23. The Tartan Peril*, a play by T. Ross-Scott (Messrs. Sam Livesey, Henry Wenman, Campbell Gullan, and Dennis Wyndham, and Mesdames Mary O'Farrell and Mary Forrester). *June 16. The Wrong Number*, a farce by Harriet Ford and Harvey O'Higgins (Messrs. C. M. Hallard, Jack Hobbs, and Campbell Gullan, and Mesdames Clare Greet, Joan Vivian-Rees, Joan Barry, and Yvonne Arnaud).

EMPIRE.—*March 12, 1921. The Rebel Maid*, romantic light opera by Montague Phillips, with book of Alexander M. Thompson, and lyrics by Gerald Dalton (Messrs. Thorpe Bates, Hayden Coffin, Walter Passmore, and William Cromwell, and Mesdames Clara Butterworth, Betty Chester, and Ada Blanche). *July 16. "Some" Detective*, "crook" drama by Harvey J. O'Higgins and Harriet Ford (Messrs. George Wood, Martyn Ronald, and Stephen Ewart, and Mesdames Jessie Winter, Ethel Irving, and Gabrielle Casartelli).

GAITY.—*Jan. 8, 1921. The Betrothal*, by Maurice Maeterlinck, a sequel to *The Blue Bird*, with music by C. Armstrong Gibbs (Messrs. Bobbie Andrews, Ivan Berlyn, William Farren, and Henry Wenman, and Mesdames Gladys Cooper, Winifred Emery, and Stella Campbell). *April 19. Faust on Toast*, a burlesque by Firth Shephard and Adrian Rose, with music by Willy Redstone and Melville Gideon (Messrs. Jack Buchanan, Morris Harvey, George Barrett, and Robert Hall, and Mesdames Renée Mayer, Heather Thatcher, Nancie Lovat, and Maisie Gay). *May 12. Revised version* by Leslie Henson of above, which had been withdrawn after a few performances.

GARRICK.—*Nov. 22, 1920. You Never Can Tell*, G. B. Shaw's comedy revised (Messrs. Louis Calvert and Francis Lister, Mesdames Viola Tree and Nadine March, and Lady Tree). *Dec. 22. The Shepherdess Without a Heart*, Bertram Forayth's fairy play revived (Messrs. Bertram Forsyth and Maurice Turner, and Mesdames Nellie Brierciliffe and Kathleen Patrick). *Jan. 29, 1921. The Three Daughters of M. Dupont*, Brieux's play revived (Messrs. Charles Kenyon and Leon M. Lion, and Mesdames Ethel Irving, Lucy Wilson, Edith Evans, and A. B. Tapping). *Feb. 23. The Fulfilling of the Law*, a play by J. E. Harold Terry (Messrs. Arthur Wontner and A. Scott Gatty, and Mesdames Mary Rorke, Constance Collier, and Doris Lytton). *March 7. The Muddler*, a comedy by A. W. Dale and Elliot Stannard (Messrs. Charles Windermere, William Burchill, Martin Walker, and Arthur Helmore, and Mesdames Nadine March and Clare Sutton). *April 26. Count "X"*, a comedy by Horace Annesley Vachell (Messrs. Herbert Marshall and Leon M. Lion, and Mesdames Moyna Macgill, Marie Illington, and Laura Wallis Miles). *June 28. La Truite d'Amour*, by Louis Verneuil, French-savoy commenced (Messieurs Louis Verneuil and Louis Scott, and Mesdames Madeleine Lambert and Mitzzy-Dalitz). *Aug. 9. The Edge*

o' Beyond, a Rhodesian comedy adapted by Roy Horniman and Ruby Miller from the novel of Gertrude Page (Messrs. Basil Rathbone, James Lindsay, and Charles Carson, and Mesdames Ruby Miller and Doris Lloyd).

GLOBE.—Feb. 11, 1921. *The Hour and the Man*, by Horace Annesley Vachell and J. O. Smith (Messrs. Dawson Milward, W. Cronin-Wilson, Ernest Hendrie, and James Dale, and Mesdames Marie Lohr and Ellis Jeffreys). **March 8.** *Her Husband's Wife*, comedy by A. E. Thomas revived (Messrs. Farren Soutar, Spencer Trevor, and J. H. Roberts, and Mesdames Marie Lohr, Hilda Glynn, and Ellis Jeffreys). **April 23.** *The Knave of Diamonds*, drama founded by Charlton Mann upon Ethel M. Dell's novel (Messrs. G. H. Mulcaster, Henry Vibart, and Townsend Whiting, and Mesdames Violet Vanbrugh, Lena Halliday, and Cecily Byrne). **Sept. 8.** *Woman to Woman*, a comedy by Michael Morton (Messrs. Arthur Wontner and Athole Stewart, and Mesdames Willette Kershaw and Henrietta Watson).

HAYMARKET.—**March 3, 1921.** *The Circle*, a comedy by W. Somerset Maugham (Messrs. Allan Ayneworth, Leon Quartermaine, E. Holman Clark, and Ernest Theisger, and Mesdames Fay Compton and Lottie Venn). **Aug. 11.** *Quality Street*, Sir James Barrie's romance revived (Messrs. Leon Quartermaine, Nigel Bruce, and Cecil Trouncer, and Mesdames Fay Compton, Hilda Trevelyan, and Mary Jerrold).

HYPPODROME.—**Dec. 21, 1920.** *Aladdin*, pantomime by Lauri Wylie and F. Maxwell-Stewart, with music by James W. Tate (Messrs. Lupino Lane, Stanley Turabill, and Albert Darnley, and Mesdames Phyllis Dare, Elsie Prince, and Nellie Wallace). **April 14, 1921.** *The Peep Show*, a "topical fantasia" by Lauri Wylie, with music by James W. Tate (Messrs. Stanley Lupino, Fred Allandale, Reginald Sharland, and Albert Darnley, and Mesdames Mona Vivian, Annie Croft, and Desirée Ellinger).

HIS MAJESTY'S.—**Oct. 15, 1921.** *Cairo*, a "mosaic in music and mime," by Oscar Asche and Percy Fletcher (Messrs. Oscar Asche, Shayle Garduer, Cecil Humphreys, Hubert Carter, Frank Cochrane, and Courtice Pounds, and Mesdames Lily Brayton, Gracie Leigh, and Fedora Rozelli).

KINGSWAY.—**Nov. 24, 1920.** *The Knight of the Burning Pestle*, revival of Beaumont and Fletcher play, with music written and arranged by Frederic Austin (Messrs. Halliwell Hobbes, Ivan Berlyn, E. M. Robson, Noel Coward, and Thomas Weguelin, and Mesdames Betty Chester and Mary Barton). **March 26, 1921.** *The Heart of a Child*, romance founded by Gilbert Frankau on Frank Danby's novel (Messrs. Arthur Pusey, C. V. France, and Will West, and Mesdames Renée Kelly and Aimée de Burgh). **May 12.** *Hunky Dory*, Scottish comedy by Macdonald Watson (Messrs. Macdonald Watson, Walter Roy, and Robert Drysdale, and Mesdames Frances Ross-Campbell and Nell Barker).

LITTLE.—**Dec. 15, 1920.** New Grand Guignol programme, *Eight O'Clock*, by Reginald Berkeley (Messrs. Russell Thorndike and Lewis Casson); *Private Room No. 6*, by André de Lorde (Mr. George Bealby and Miss Sybil Thorndike); *A Man in Mary's Room*, by Gladys Unger (Miss Dorothy Minto); and *The Tragedy of Mr. Punch*, by Reginald Arkell and Russell Thorndike, with music by Albert Fox (Mr. Thorndike and Miss Thorndike). **Jan. 27, 1921.** *The Shortest Story*

of All, by George E. Morrison (Mr. Stockwell Hawkins and Miss Elisabeth Arkell), and *The Person Unknown*, by H. F. Maltby (Messrs. Lewis Casson and Russell Thorndike, and Mesdames Sybil Thorndike and Dorothy Minto). **March 28.** *The Kilt*, adapted from the French of Maurice Level by W. E. Harris (Messrs. Lauderdale Maitland and Russell Thorndike, and Miss Sybil Thorndike); *The Seven Blind Men*; *Dead Man's Pool*; *The Chemist*; and *The Love Child* (Miss Cicely Oates). **June 29.** *The Old Women*, by André de Lorde, adapted by Christopher Holland (Mr. Lewis Casson and Mesdames Sybil Thorndike, Barbara Gott, and Athene Seyler); *The Vigil*, by André de Lorde (Mr. George Bealby and Miss Sybil Thorndike); *Latitude 15 deg. S.*, by Victor Machure; *Rounding the Triangle*, by E. Crawshaw-Williams (Mr. Lewis Casson and Mesdames Sybil Thorndike and Athene Seyler); *Shepherd's Pie*, adapted by Sewell Collins from the French (Messrs. Stockwell Hawkins, Russell Thorndike, and George Bealby, and Mesdames Athene Seyler, Barbara Gott, and Cicely Oates). **Oct. 12.** *E. and O.E.*, by E. Crawshaw-Williams (Messrs. Lewis Casson and Russell Thorndike, and Mesdames Ivy Williams and Barbara Gott); *Harriet Beane*, a farce by C. Phaine and E. de Beauplan, adapted by Sewell Collins (Mr. Stockwell Hawkins and Miss Cicely Oates); *The Old Story*, by C. H. Hirsch, adapted by Hugh McLellan (Mr. Nicholas Hannen and Miss Sybil Thorndike); *The Unseen*, by J. J. Renaud (Messrs. Thorndike and Hannen, and Miss Thorndike), and *The Fear*, by André de Lorde (Mr. Thorndike and Miss Thorndike).

LYCEUM.—**Dec. 27, 1920.** *Babes in the Wood*, pantomime (Messrs. George Jackley, Gus Sharland, George Belmore, Billy Danvers, and Bertram, and Mesdames Lily Edwards and Naomi Stuart). **March 3, 1921.** *The Savage and the Woman*, romantic play by Arthur Shirley and Ben Landeck (Messrs. Philip Yale Drew, Herbert Leonard, J. T. MacMillan, and Edmund Kennedy, and Mesdames Dorothy Moody, Jane Wood, and Florrie Kelsey). **July 6.** *Abraham Lincoln*, John Drinkwater's drama revived (Messrs. William J. Rea, Victor Tandy, Harcourt Williams, and Joseph A. Dodd, and Mesdames Mary Raby and Cathleen Orford). **Oct. 24.** *The Only Way*, revived (Sir John and Lady Martin Harvey, Messrs. William Stack, William Farren, and Arthur Chesney, and Mesdames Marie Hemingway and Marie Linden). **Oct. 26.** *The Burgomaster of Stillemonde*, by Maurice Maeterlinck, translated by Alexander Teixeira de Mattos (Sir John and Lady Martin Harvey, and Messrs. Walter Pearce, Malcolm Keen, Arthur Chesney, and George Cooke).

LYRIC.—**Dec. 1, 1920.** *A Little Dutch Girl*, a musical play by Emmerich Kalman (Messrs. Lauri de Frece, Jack Hubert, Martin Iredale, and Lawrence Caird, and Mesdames Maggie Teyte, Cicely Debenham, and Molly Ramsgate). **July 12, 1921.** *After Dinner*, an "entertainment" (Messrs. Nat D. Ayer, George Graves, Harry Green, and Milton Hayes, and Mesdames Daphne Pollard and Jennie Benson). **Oct. 19.** *Welcome Stranger*, a comedy by Aaron Hoffman (Messrs. Harry Green, George Elton, Paul Arthur, and Sydney Paxton, and Miss Margaret Sannerman).

NEW. **Aug. 31, 1921.** *Christopher Sly*, a fantastic play, adapted by H. B. Cotton from the Italian of Giovaquinio Forzano (Messrs. Matheson Lang, Arthur Whitley, and Frederick Groves,

and Mesdames Florence Saunders and Dorothy Charles).

NEW OXFORD.—*Jan. 17, 1921. The League of Nations*, revue devised by John Murray Anderson (Messrs. A. W. Backcomb, Bert Coots, George Bascly, and Fortunello and Cirillino, and Mesdames Josephine and Helen Trix, Grace Christie, and the Dolly Sisters).

PAVILION.—*Sept. 2. The Chauve-Souris* Theatre of Moscow in a selection of their repertoire, under M. Nikita Balleff. *Oct. 17. The Fun of the Foyre*, a revue by John Hastings Turner and Lauri Wylie, with music by Augustus Barratt (Messrs. Alfred Lester, Walter Williams, Arthur Roberts, and Morris Harvey, and Mesdames Evelyn Laye and June).

PLAYHOUSE.—*Jan. 26, 1921. A Lady Calls on Peter*, a farce by H. Wall (Messrs. Arthur Wontner, Tom Reynolds, and Arthur Hambling, and Mesdames Hilda Trevelyan, Lettice Fairfax, Laura Lydia, and Mary Barton). *Jan. 31. Hanky Panky John*, a farce by Basil Macdonald Hastings (Messrs. Stanley Logan, Ben Field, and Tom Weguclin, and Mesdames Kate Cutler, Lola Gelardi, and Kathleen Grey). *March 4. Love! !* a comedy by M. A. Arabian (Messrs. Stanley Logan, Sam Livesey, and Frederick Worlock, and Mesdames Mary Merrill, Dorothy Tetley, and Auriol Lee). *April 6. Up in Mabel's Room*, a farce by Wilson Collison and Otto Harbach (Messrs. Charles Hawtreay and Stanley Brett, and Mesdames Beatrice Lillie, Isobel Elsom, and Marie Hemingway). *July 18. M' Lady*, a comedy by Edgar Wallace (Messrs. Wilfred Fletcher, Arthur Preston, and Frederick Leister, and Mesdames Henrietta Watson and Helen Spencer). *Sept. 1. The Sign on the Door*, a drama by Channing Pollock (Messrs. Godfrey Tearle, Leslie Faber, and Dennis Trent, and Mesdames Gladys Cooper and Muriel Martin-Culvey).

PRINCE'S.—*Nov. 3, 1920. Columbine*, comedy founded by Compton Mackenzie on his book "Carnival" (Messrs. Bobbie Andrews and Frank Bertram, and Mesdames Ellen Compton, Joan Hay, Dorothy Lane, and Margaret Watson). *Dec. 20. Charley's Aunt*, Brandon-Thomas's farce revived (Messrs. William Kershaw, H. B. Meade, and Jevan Brandon-Thomas, and Mesdames Elisor Hare, Ada Ferrar, and Kathleen Saintsbury). *April 4, 1921. Daniel*, M. Louis Verneuil's play in French, with Madame Sarah Bernhardt in her original rôle. *April 26. French* season opened with *Le Cœur Disposé*, by Francis de Croisset (Messieurs André, Brulé, Séverin, and Malair, and Mme. Madeline Lély). *Oct. 3. Gilbert and Sullivan* season commenced with revival of *The Gondoliers* (Messrs. Henry A. Lytton, Derek Oldham, Sydney Granville, and Leo Sheffield, and Mesdames Bertha Lewis, Helen Gilliland, and Elsie Griffin). *Oct. 17. Trial by Jury* and *The Pirates of Penzance*. *Oct. 24. Ruddigore*, first revival in London for 22 years (Messrs. Lytton, Oldham, Sheffield, and Darrell Fancourt, and Mesdames Griffin, Lewis, and Catherine Ferguson).

PRINCE OF WALES'S.—*May 26, 1921. The Gipsy Princess*, a musical operette by Arthur Miller, with music by E. Kalman (Messrs. Billy Leonard, Mark Lester, Leonard Mackay, and de Jari, and Mesdames Sari Petras and Phyllis Titmus). *Oct. 11. A. to Z.*, a revue (Messrs. Frederick Ross, Jack Buchanan, Herbert Mundin, and George Weston, and Mesdames Elizabeth Pollock, Helen and Josephine Trix, and Gertrude Lawrence).

QUEEN'S.—*Dec. 13, 1920. It's All Wrong*, a "musical complaint" by Elsie Janis, with music by Herman Flack (Messrs. Stanley Lupino, Arthur Margetson, and Julien Thayer, and Mesdames Elsie Janis and Yvonne Geraine). *March 22. Nightie Night*, a farce by Martha M. Stanley and Adelaide Matthews (Messrs. Percy Hutchinson and James Carew, and Mesdames Dorothy Minto and Evelyn Laye). *April 27. Mary*, a musical play by Otto Harbach and Frank Mandel, with music by Lewis A. Hirsch (Messrs. Ralph Lynn, Alec Regan, and Bernard Granville, Mesdames Evelyn Laye, Maudie Hope, and Mabel Sealby, the McLeans, the Magleys, and the Loner Sisters). *The Showing Up of Blanco Point*, Bernard Shaw's "sermon in crude melodrama," produced by the Everyman Repertory Company (Messrs. Brember Wills, Felix Aylmer, Harold Scott, and Leslie Banks, and Mesdames Muriel Pratt, Marjorie Gahin, and Edith Harley). *Aug. 19. My Niece*, a musical farce founded on Sir Arthur Pinero's play "The Schoolmistress," by Percy Greenbank, with music by Howard Talbot (Messrs. Ralph Lynn, Louis Bradfield, and George Bishop, and Mesdames Binnie Hale, Maudie Hope, and Marjorie Gordon). *Oct. 6. The Hotel Mouse*, a comedy adapted from the French of Paul Armont and Marcel Gerbido by Fryn Tennyson Jesse and H. M. Harwood (Messrs. Henry Kendall, Tom Reynolds, and F. Holman Clark, and Mesdames Dorothy Minto and Muriel Pratt).

ROYAL OPERA HOUSE.—*Dec. 9, 1920. David Garrick*, new opera by Reginald Somerville (Messrs. William Boland, Henry Brindle, Frederick Clendon, and Kingsley Lark, and Mesdames Beatrice Miranda and Gladys Farr). *Dec. 27. Cinderella*, pantomime by Frank Dix and Arthur Collins, with music by J. M. Glover (Messrs. Harry Claff, Arthur Conquest, and Seth and Albert Egbert, and Mesdames Marie Blanche, Kathlyn Hilliard, Lily Long, and Mabel Green). *Oct. 17, 1921. Carl Rosa Opera* season opened with *Sansón and Delilah* (Messrs. William Boland, Booth Hitchen, and Harry Brindle, and Miss Doris Woodall).

ROYALTY.—*Nov. 20, 1920. Milestones*, by Arnold Bennett and Edward Knoblock, revived (Messrs. Dennis Eadie, Hubert Harben, and John Howell, and Mesdames Haidée Wright, Mary Lincoln, and Stella Jesse). *Feb. 22, 1921. A Social Convenience*, a comedy by H. M. Harwood (Messrs. Dennis Eadie, Hubert Harben, Nigel Playfair, and H. G. Stoker, and Mesdames Hilda Moore and Stella Jesse). *May 13. Pins and Needles*, a revue (Messrs. Edmund Gwenn, Alfred Lester, and Jack Morrison, and Mesdames Mai Bacon and Billie Hill). *June 14. The Cinema Lady*, a farce by Nancy and Jean Rioux (Messrs. Morris Harvey, Cronin Wilson, Charles Stone, and Clifford Heatherley, and Mesdames Edna Aug and Mary O'Farrell). *June 27. The Co-Optimists*, a "pirotic entertainment" (Messrs. Laddie Cliff, Stanley Holloway, Melville Gideon, and Gilbert Childs, and Mesdames Betty Chester, Phyllis Monkman, and Elsa Macfarlane). *Sept. 3. Ring Up*, a revue by Eric Blore, Austin Malford, and Inglis Allen, with music by Ivy St. Heller (Messrs. Jack Hulbert, Eric Blore, and Spencer Trevor, and Mesdames Phyllis Dare, Marie Blanche, Cicely Courtneidge, and Ivy St. Heller).

ST. JAMES'S.—*Dec. 20, 1920. Peter Pan*, Sir James Barrie's play revived (Messrs. Harry Ainley, George Skelton, and Fotheringham Lyons, and Mesdames Edna Best, Sybil Carlisle,

and Freda Godfrey). *Jan. 15, 1922. Daniel*, adapted from the French of Louis Verneuil by Sibyl Harris (Messrs. Lyn Harding, Claude Rains, George Elton, Leslie Faber, and Aubrey Smith, and Mesdames Alexandra Carlisle, Alice Moffat, Edith Evans, and Gladys Gray). *March 2. Polly with a Past*, a comedy by George Middleton and Guy Bolton (Messrs. Donald Calthrop, C. Aubrey Smith, Claude Rains, Paul Arthur, Noel Coward, Henry Kendall, and Arthur Hatherton, and Mesdames Edna Best, Alice Moffat, and Helen Hays). *May 16. Emma*, a comedy by Herbert Thomas (Messrs. Edgar Norfolk, Herbert Thomas, and Robert Hinton, and Mesdames Joan Swinstead, Alex Frizell, and Amy Brandon-Thomas). *June 15. The Night of the Party*, Weedon Grossmith's farce revived (Messrs. Lauri de Fieco, Robert Horton, and Sydney Paxton, and Mesdames Elsie Strinack, Marjorie Brooks, and Joan Swinstead). *Aug. 23. Threads*, a comedy by Frank Statton (Messrs. Lyn Harding, Henry Kendall, C. M. Lowne, and Cyril Raymond, and Mesdames Ellis Jeffreys and Faith Celli). *Sept. 22. The Speckled Band*, Sir Arthur Conan Doyle's drama revived (Messrs. Lyn Harding, H. A. Saintsbury, and Charles Barrett, and Mesdames Mary Morrall and Grace Edwin).

ST. MARTIN'S.—*Feb. 10, 1921. The Wonderful Visit*, by H. G. Wells and St. John Ervine (Messrs. J. H. Roberts, Harold French, and Lawrence Hanray, and Mesdames Moyna Macgill, Agnes Thomas, and Compton). *March 14. A Bill of Divorcement*, a drama by Clemence Dane (Messrs. Malcolm Keen, C. Aubrey Smith, Stanley Lathbury, and Fawcett Llewellyn, and Mesdames Lillian Braithwaite, Meggie Albanesi, and Agnes Thomas).

SAVOY.—*Dec. 24, 1920. Hamlet* (Messrs. Henry Baynton, Edward Dunsan, F. R. Richardson, and R. Hoodless, and Mesdames Gertrude Gilbert and Joyce Carey).

SHAFTESBURY.—*Feb. 28, 1921. Kynaston's Wife*, a comedy by Winifred Dolan at Charity Matinee (Mr. Langhorne Burton and Nesta Sawyer). *May 4. Sweet William*, a comedy by Noble Howard (Messrs. George Tully, Cyril Raymond, and John E. Coyle, and Mesdames Cathleen Nesbitt, Susie Vaughan, and Pollie Emery). *June 11. Out to Win*, a drama by Roland Pertwee and Dion Clayton Calthrop (Messrs. George Tully, C. V. France, George Elton, and James Carew, and Mesdames Edith Evans, Midge Compton, and Hilda Bayly). *Sept. 4. The Labour Member*, a play by ~~James~~ Hendle produced by the Repertory Players (Messrs. William Stack and Henry Oscar, and Mesdames Christine Silver, Margaret Vaughan, and Leonora Braham). *Oct. 1. Timothee*, a comedy by David Belasco and W. J. Hurlbut (Messrs. Cyril Maude, C. V. France, and ~~James~~ Roughwood, and Mesdames Nina Boucicault and Gladys Ffollicott).

SPRANG.—*Nov. 23, 1920. The Storm*, a comedy by Langdon McCormick (Messrs. Arthur Bourne, James Dale, and Norman Page, and Miss Kylie Bellow). *Dec. 20. At the Villa Rose*, A. E. W. Mason's play revived (Messrs. Arthur Bourne, James Dale, and Norman Page, and Mesdames Kylie Bellow and Beatrice Wilson). *Jan. 23, 1921. A Safety Match*, a comedy by Ian Hay (Messrs. Arthur Bourne, Herbert Marshall, H. R. Hignett, and Norman Page, and Mesdames Kylie Bellow, Marie Wright, and

Muriel Pope). *Aug. 20. The Trump Card*, a farce adapted from the French of Maurice Hennequin and Georges Duval, by Arthur Wimperis (Messrs. Jack Buchanan, John Dorell, Norman Page, Griffith Humphreys, and Charles Groves, and Mesdames Muriel Pope, Margaret Bannerman, and Kylie Bellow).

VAUDEVILLE.—*Dec. 16, 1920. Jumble Sale*, a revue by J. Hastings Turner and Philip Braham (Messrs. Walter Williams, Eric Blom, Gilbert Calles, and Bob Cory, and Mesdames Binnie Hale, Phyllis Titmus, and Joyce Barbour). *May 14, 1921. Puss! Puss!* a revue by several authors (Messrs. Clay Smith, Horace Barnes, Bert Coote, and Walter Williams, and Mesdames Lee White, Joyce Barbour, Nora Creina, and Ethel Stewart). *Sept. 17. Now and Then*, a musical extravaganza by J. Hastings Turner, with music by Philip Braham, and lyrics by Reginald Arkell (Messrs. George Graves, Roy Royston, and Miles Malleon, and Mesdames Joyce Barbour and Laura Cowie).

WINTER GARDEN.—*May 30, 1921. Mother of Pearl*, one act play by Gertrude Jennings (Mr. Herbert Marshall, and Mesdames Sydney Fairbrother and Marie Lohr), and *The Long Arm of Coincidence*, one act play by Dion Titheradge (Mr. C. V. France and Miss Lillian Braithwaite). *Sept. 10. Sally*, a musical comedy by Guy Bolton, with lyrics by Clifford Grey, and music by Jerome Kern (Messrs. George Grossmith, Leslie Henson, and Gregory Shoud, and Mesdames Dorothy Dickson, Heather Thatcher, and Molly Ransden).

WYNEMAN'S.—*March 29, 1921. Bull-Dog Drummond*, a play of adventure by "Sapper" (Messrs. Gerald du Maurier, Gilbert Hare, Alfred Drayton, Ronald Squire, and Basil Foster, and Mesdames Emily Brooke and Dorothy Overend).

THE STAGE SOCIETY produced: *O'Flaherty, V.C.*, a farce by George Bernard Shaw (Messrs. Arthur Sinclair and Roy Byford, and Miss Sara Allgood), and *Forerunners*, a tragedy by H. O. Meredith (Mr. W. Croftis-Wilson and Miss Mary Merrall), *Dec. 20, 1920; At Mrs. Bevan's*, a comedy by C. K. Munro (Messrs. H. K. Ayliff, Balive Holloway, Alec Snowdon, and Knew McMaster, and Mesdames Jean Cadell, Elaine Limousin, Adela Mavis, Phyllis Stuckey, and Hannah Jones), *Feb. 1921: The Race with the Shadow*, a drama by Wilhelm von Scholz (Messrs. Franklin Dyal and George Relf, and Mesdames Helen Hays and Sylvia Young).

THE PHOENIX SOCIETY produced: *Venice Preserved*, Thomas Otway's tragedy, *Nov. 30, 1920* (Messrs. Ion Swinley, Allan Wade, Balliol Holloway, and Eugene Leahy, and Miss Cathleen Nesbitt); Ben Jonson's *Volpone*, *Feb. 2, 1921* (Messrs. Balliol Holloway, Ion Swinley, Stanley Lathbury, and Eugene Leahy, and Mesdames Isabel Jeans and Margaret Yarde); *Love for Love*, Congreve's drama, *March 14* (Messrs. Murray Carrington, Balliol Holloway, Ernest Essinger, Ben Field, Miles Malleon, and Roy Ford, and Mesdames Joan Viriam Rees, Helen Hays, and Athene Seyler); *The Witch of Blackenston*, *April 16* (Messrs. Ion Swinley, Joseph A. Dodd, and Russell Thorndike, and Mesdames Marjorie Gordon, Sybil Thorndike, and Mary Barton); *Bartholomew Fair*, Ben Jonson's comedy, *June 17* (Messrs. Roy Byford, Ernest Essinger, Ben Field, and Stanley Lathbury, and Mesdames Helena Millais and Angela Baddeley).

BATTEN ASSOCIATION.—The eighty-ninth annual meeting of the British Association for the Advancement of Science was held at Edinburgh from Tuesday, September 2, till September 14. Sir Edward Thorpe, who succeeded Professor W. A. Hardman as President, dealt in his address with "Some Aspects and Problems of Post-War Science, Pure and Applied." (It was read by Sir J. A. Ewing, owing to the President's absence through illness.) A feature of his address was the vigorous denunciation of the use of poison gas as a weapon of war, and the appeal to the Association to set its face against the continued degradation of science in thus augmenting the horrors of war. The following were the Presidents of the various sections:—A, Mathematics and Physics, Prof. O. W. Richardson; B, Chemistry, Dr. M. O. Forster; C, Geology, Dr. J. S. Flett; D, Zoology, Prof. E. S. Goodrich; E, Geography, Dr. D. G. Hogarth; F, Economics, Mr. W. L. Hitchens; G, Engineering, Prof. A. H. Gibson; H, Anthropology, Sir J. G. Fraser; I, Physiology, Sir Walter M. Fletcher; J, Psychology, Prof. Lloyd Morgan; K, Botany, Dr. D. S. Scott; L, Education, Sir Henry Hadow; M, Agriculture, Mr. C. S. Orwin. Three public lectures to citizens were given—Sir Oliver Lodge on "Speech through the Ether"; Prof. Dendy on "The Stream of Life"; and Prof. H. J. Fleure on "Countries as Personalities." Dr. E. J. Russell gave a special lecture on "Science and Crop Production." In 1922 the Association will meet at Hull, under the presidency of Prof. C. S. Sherrington; in 1923 at Liverpool, and in 1924 at Toronto.

ALCOHOL FROM THE JUNGLE.—The annual production of alcohol from the nipa plant in the Philippines is now nearly 3,000,000 gallons. Reflecting on this Prof. H. N. Whitford, of the Yale School of Forestry, suggests that alcohol for drawing motor-cars could be manufactured from the moist vegetation of tropical jungles. The evidence was conclusive, he said, that the tropical sun had the power to store up more energy in the form of cellulose in a given time than had the temperate sun. It remained for the ingenuity of man to overcome the difficulties of profitably applying it.

BALSA WOOD.—Balsa is the lightest known wood in existence; a cubic foot weighs only 7½ lb., yet its strength is half that of spruce. These and other facts are given by Mr. R. C. Carpenter in the Transactions of the American Society of Civil Engineers, where he points out that balsa has been used for rafts, floats, and life-preservers, and is now much employed, as a non-conductor of heat, for ice-boxes and refrigerators. Frozen butter sent from Virginia in a small balsa box arrived at Los Angeles after an eight days' journey in summer weather still hard and frozen. Containers made of balsa wood may eventually displace thermos flasks.

BRETTLES AND TELEPHONES.—Mr. T. E. Snyder has called the attention of the Biological Society of Washington to the serious injury caused to the lead sheathing of aerial telephone cables by the beetle *Sabotia depina*. In summer the beetle, which breeds in recently felled wood, attacks the cable at the point where it is in contact with the metal suspension ring. The hole allows moisture to penetrate the insulation, and when the rain falls in the autumn many widely separated short circuits are produced. Hitherto both chemical and

mechanical methods of eliminating the pest have proved unavailing.

BOTTLES AT 18, A MINUTE.—A machine which can turn out 280 small glass bottles a minute has been installed by the United Glass Bottle Manufacturers at Charlton. It is described as being "not unlike a gigantic radial petrol engine in shape." The machine when working synchronises with a rotating table of liquid glass, and by means of vacuum and compressed air the liquid glass is sucked into moulds and blown into shape. The process of making a bottle takes ten seconds, but the annealing or cooling process that follows takes nearly ten hours.

BUDDHISM AND ANIMISM.—Mr. E. Grant Brown discussed in "Folk-Lore" the pre-Buddhist religion of the Burmese. The animism which now widely prevails, he says, is quite apart from Buddhism, and though Burmese Buddhism is in one sense only a veneer over the prevailing animism, it is not more superficial than the state of belief even in Western countries. It is frowned on by the monks, yet not only do the votaries of the orthodox creed refrain from persecuting the beliefs and practices of the lower orders, but also both forms prevail even among the same individuals. A good example of this form of worship is that of the Nats, spirits of mountain, whirlpool, tree, earth or sky, rain or wind, and a hundred other things. Human sacrifice is still found in the Chinthee district, when a boy or a girl of a distant village is annually sacrificed and the blood sprinkled on the seed-rice. Cannibalism, in the sacramental form, appears in the case of a rebel leader who had been a monk and a reputed sorcerer.

CINEMA LIGHTS AND EYESIGHT.—An interim report on the alleged dangerous lights in cinema studios has been issued on behalf of the Ministry of Health. According to experts the trouble is due mainly to the use of powerful arcs of the searchlight pattern in an unshaded condition. Such lamps may cause injury by the unimpeded access of ultra-violet rays, and it is thought possible that artists looking straight at the lights may suffer from the intense visible lights. The letter of enquiry suggested that the possibilities of injury would be slight if all lamps were properly screened.

COAL AND OIL.—Coal is likely to remain for a long time the world's chief source of fuel, says Sir George Baily in the James Forrest lecture. Brown coal and peat were dismissed on account of the vast areas of land which are required in order to obtain adequate supplies and pay for them for use. Oil amounts to 7 per cent. of the fuel output of the world, and nearly nine-tenths of this quantity is controlled by the United States. The conclusion of the chief petroleum technologist of the United States Bureau of Mines, that after 20 years at the present rate of consumption the output will decline, is therefore of importance, though there is reason to expect production from oilfields in other parts of the world which have not as yet been tapped. The only method available in Great Britain for the commercial preparation of alcohol is by the fermentation of vegetable materials containing starch or sugar. Some alcohol may be produced from molasses in countries where the sugar-cane is grown, but it is unlikely that more than is required for local use can be made. It was

suggested that more efficient use of coal might be secured by careful setting at the pitheads, by improvements in boiler-firing, and by preliminary carbonisation at high or low temperatures.

CROP-GROWING BY ELECTRICITY.—Electrical stimulation of plant growth has been tried on a large scale at the Rothamstead Experimental Station. Currents of 35,000 volts were passed through growing barley over a network of wires 30 feet from the ground, trials being made of alternating and continuous discharges, and of negative and positive discharges. The average increase of growth caused by electrical discharges over field crops was found to be about 25 per cent., or just below what is necessary to make it an economical proposition. In other words the increase of the crop barely pays for the cost of the electricity.

DRAINAGE OF PRE-MAORI DAYS.—During drainage operations in the Awanui Swamp in North Island, New Zealand, an elaborate drainage system, which it is believed may antedate both the Maori and the Moriori, was disclosed. The drains are about 5 feet in width and 5 feet in depth, with regularly sloped sides, the bottom being about $3\frac{1}{2}$ feet wide. They run for many miles across country in parallel lines perfectly straight, with numerous right-angle cross-drains. An indication of their age is afforded by the fact that in places huge trees of slow growth have grown up in the drains after their formation and decayed. The remains of deeply embedded posts with sharpened ends on a mound in one part of the swamp indicated that it had been the site of a building. A remarkable piece of carved wood in the shape of a lintel was found at a depth of 5 feet. In its centre is represented a human figure, almost gorilla-like in appearance; it has a broad, wedge-shaped head with projecting ears, small broad nose, and a large oval mouth with small tongue. The body is small, short, and squat. The outstretched hands of the figure rest on a perforated framework spreading right and left, the ends of which each terminate in a saurian-like head.

EARTH'S HEAVING CRUST.—Lieut.-Col. E. A. Tandy, at the Royal Geographical Society, propounded a new theory of the "circulation of the earth's crust." He allows in full for the erosion wrought by rain, rivers, and glaciers, but he adds to this a conception of the material of the earth as in a state of flow below the surface, which tends to move matter from the depths of high pressure to the regions of lower pressure. There is thus a constant striving towards equality of load at the surface of the earth, which is counteracted by erosion and gravitation, and in its turn corrects the effect of these. If the theory proved true it would alter enormously our conceptions of geological time, reducing by millions of years the periods required for the moulding of the earth's surface by slowly operating forces.

EGGS FROM SPITSBERGEN.—The Rev. F. C. R. Jourdain, leader of the Oxford University Expedition to Spitsbergen, wrote to the *Times* in condemnation of the depredations by egg-collectors among the nesting-birds of that island. The introduction of oil-engines into sealing-sloops, he says, has enabled them to work practically the whole of the west and north coasts of Spitsbergen with little danger of their

being trapped by drift-ice. They have systematically cleared the nests of the large colonies of eider-ducks breeding there. One boat was met which had 15,000 eggs of the eider-duck on board! Examination of the colonies showed that the vast majority of the nests contained one or, at most, two eggs. The large colonies of brent geese, which were known to nest on some of the eider holms as lately as 1908, have disappeared entirely, and the survivors scattered to nest in isolated pairs on the mainland, there to fall victims to the Arctic fox. In colonies of eider-ducks on the more inaccessible parts of Spitsbergen the nests contained an average of six eggs each, the largest number in a single nest being thirteen, and the busy scene of life on an untouched eider colony provided a glimpse of the Spitsbergen of the past, before the coming of the oil-engine and the coal prospector.

EYE-POWER TO WORK AN INSTRUMENT.—Dr. Charles Russ has devised an instrument by which an inanimate object is made to move by a force or ray from the eye of the observer. Writing in the *Lancet*, he said: "The fact that the direct gaze or vision of one person soon becomes intolerable to another person suggested to me that there might be a ray of radiation issuing from the human eye." To test this theory he devised an instrument which could be set in motion by the mere impact of human vision. Within a metal box he suspended a delicate solenoid made of fine copper wire. This solenoid was wound on a cylinder of celluloid and suspended by a silk fibre (unspun silk) 14 in. long. The box was 3 ft. by $8\frac{1}{2}$ in. by 7 in., and lined with sheet aluminium. The far end of the box was closed by a sheet of window glass, and the observer's end had a thin glass or celluloid window, screened by a sheet of aluminium with a slot 3 in. long and 1 in. wide. A conducting wire connected the silk fibre with the aluminium of the box, which was earthed. The solenoid was held steady by the magnet, which naturally came to rest in the magnetic meridian. The human eye was then brought to bear through the slot in the observing window on the suspended solenoid, and it was found that if a steady gaze were maintained on one end of the solenoid it started into motion, usually away from the observing eye. When the gaze was transferred to the true centre of the solenoid it stopped, and when the vision was applied to the opposite end of the solenoid it moved in a reverse direction to the motion first induced.

FERRYING TRAINS TO SWEDEN.—A proposal has been made to establish a train ferry service between England and Sweden, similar to that between Germany and Sweden. Dr. Ahlberg, Chief of the Swedish State Railways, estimates that vessels of 13,000 tons, with a speed of 18 knots, and capable of carrying 500 tons of goods in trucks, could make the return journey in four days, allowing twelve hours for detention on the English side and twenty-six hours on the Swedish side, or possibly in three days, as compared with fourteen days on the voyage by ordinary steamers, which occupied two days each way in loading and unloading. Six vessels would ensure a daily service. The estimated cost of the whole project is £20,000,000.

FILM PHOTOPHONE.—A remarkable invention has been perfected in Sweden for synchronising the photographic record of action and the

gramophone record of sound. It is mainly the work of Mr. S. A. Berglund, assisted by a band of experts. The method employed involves the photography of both sights and sounds. A double camera, its two reels revolving on a common shaft, is used. One record is that of the ordinary cinematograph. The second camera is directed, not towards the actor, but at a ray of light which is agitated by his voice by means of a delicate diaphragm of rock crystal, and which writes on the celluloid film curves corresponding to the sound waves. For the purpose of reproduction use is made of selenium, which possesses the property of resisting the passage of electricity in proportion to the degree of light in which it is bathed. Among the possibilities of the invention foreshadowed are lighthouses which shout their names over sixty miles of sea.

HEART DISEASE AND BREATHLESSNESS.—Dr. John Peters and Dr. David Barr, of the Russell Sage Institute of Pathology, have carried out important studies on patients suffering from breathlessness associated with advanced heart disease. They found that in such patients the volume of air in the lungs is actually diminished. There is a lowering of the amount of air available at any given time for breathing. Or, in other words, the effective lung volume is less than normal. It follows that in these cases great increases of "ventilation" are impossible. During exertion every man "ventilates" more because he requires more oxygen and also has more carbonic acid gas to get rid of. If, however, his available air space is diminished he is like a motorist whose engine power is not sufficient for hill climbing. In order to attempt to "ventilate" better he begins to breathe faster, attempting, as it were, to make the reduced lung space do more work in shorter time. This is the "breathlessness." The trouble is shortness of breathing space rather than shortness of breath.

MANURE FROM STRAW.—Experiments are being conducted at the Rothamstead Experimental Station connected with the attempt to turn straw into farmyard manure without the intervention of animals. If straw is used as a filter through which to pass sewage a valuable manure is produced, in which a large proportion of the nitrogen in the sewage is retained. The total amount of nitrogen contained in the sewage of the United Kingdom is estimated at 230,000 tons per annum, which is equal to 1,150,000 tons of sulphate of ammonia, or five times our present agricultural consumption.

MARS A MILE AND A HALF AWAY.—Mr. M'Affee, an American millionaire scientist, is preparing a gigantic telescope with which he hopes to study Mars as though it were only a mile and a half away, and settle the question of whether life exists on the planet. A mine-shaft, 50 feet in diameter and properly sheathed, will serve as the barrel of the telescope. Instead of a glass mirror there will be a flat sheet-iron dish, 50 feet in diameter, into which mercury will be poured. When the dish is rotated at a certain speed the surface of the mercury will assume the necessary concavity and form a splendid mirror. By means of telescopic and microscopic photographs it is hoped to obtain a total magnification of 25,000,000, which means that the surface of Mars, which is 35,000,000 miles away, will be brought to a little more

than a mile and a half from the observer. Three times during 1924 Mars will be nearer to the earth than it has been for more than a century, and it is expected that the giant telescope will then be ready for use.

MEASURING THE DIAMETER OF THE STARS.—Professor Albert Michelson described before the American Association for the Advancement of Science his "interferometer" device for measuring the diameter of the stars. It is based on the phenomenon known as the interference of light. Professor Michelson said that he placed at the upper end of the 8-foot reflecting telescope at Mount Wilson Observatory, in California, an opaque cap with two slits adjustable in width and distance apart. When the instrument was focussed there appeared in the mirror, instead of the image of the star, a series of interference bands arranged at equal distances apart and parallel to the two slits. A simple formula then gave the angle subtended by the star. By this plan Professor Michelson ascertained that Betelgeuse in Orion is 260,000,000 miles in diameter, or equal to 27,000,000 suns like ours.

MURRUMBIDGEE ELECTRIC POWER.—The New South Wales Government has approved of a scheme for the development of hydro-electric power at Barren Jack Reservoir in the Murrumbidgee River, and on the Tumut River and its tributaries. A volume of 35,000 cubic feet of water is impounded by the Barren Jack Reservoir. The total estimated cost of the work is £280,000. A minimum output of 36,000,000 units is aimed at. If disposed of at an average rate of one penny per unit, a revenue of £360,000 per annum will result. The annual working expenditure is estimated at £94,480, including interest on loan and sinking fund.

PAPER THAT PERISHES.—Mr. J. J. Sudborough and Miss M. M. Mehta undertook on behalf of the Government of India an investigation into the perishing of paper in Indian libraries. "Perishing" was defined as a brittleness which is so marked that folding the paper once or twice will cause it to break along the fold. Chemical perishing, as distinct from the destruction caused by micro-organisms, was investigated, and the conclusion arrived at is that the former type of perishing is due to hydrolysis of the cellulose molecules of the paper and their later decomposition into simple substances rather than to a process of oxidation. The type of paper found to be most resistant in India is a rag-paper the fibres of which have not been weakened in the process of manufacture. Treatment which has been found to damage the fibre is prolonged digestion with alkali, over-bleaching, non-removal of the last trace of bleach by antichlor, and imperfect washing that leaves traces of acid in the paper, while rosin and filling material should not exceed a small fixed percentage.

PHOTOGRAPHS BY WIRE.—Mr. Kermode Petersen, of Christiania, has perfected a "copy heliograph" apparatus by which he claims to reproduce manuscript writing, typescript, photographs or drawings over 1,000 kilometres away in exact facsimile. The form on which the writing or drawing is done is placed with the inscribed side outwards on a metal cylinder already prepared with a membrane sensitive to light. The cylinder is then exposed to a strong light, which, penetrating through the paper, engraves the writing on the cylinder. The manuscript is removed, the roll is treated with

a special developer which "rusts" or eats into the brass, causing the lettering, or the lines of a drawing, to come out in a green colour. After washing and drying the cylinder is placed on a despatching apparatus, very much like a phonograph cylinder, over which an electric current is passed out on to the wire and so communicated to the receiving apparatus. As the cylinder rotates a small needle moves on it evenly and slowly, successively touching all the points on the cylinder. Every time it touches the green writing there is a slight contraction, which is communicated to the receiving apparatus, on which sensitised paper is placed. Thus an exact reproduction of the lettering or drawing is reproduced at the receiving end of the line. By the new apparatus, it is said, a message which requires three hours to send over the wires in the ordinary way can be despatched in twenty minutes.

PHYSICO-CHEMICAL RESEARCH.—Baron Edmond de Rothschild has placed the sum of 10,000,000 francs at the disposal of the Paris Academy of Sciences for the purpose of creating a fund for the development of physico-chemical research in France. The revenue from the capital sum will be used first for assisting young students who devote themselves to pure science; secondly, to furnish investigators with the means to carry out their work; thirdly, to help inventors who have made discoveries as a result of being assisted by the new foundation to take out patents protecting their discoveries; and, fourthly, to create later on, if necessary, an institute with laboratories to be named after the founder.

POWER FROM THE GERSOPPA FALLS.—Plans have been prepared by the Mysore Government for utilising the famous Gersoppa Falls, on the Bombay-Mysore frontier, for the production of electricity. It is proposed to construct a dam about 120 feet high, which will create a reservoir with a capacity of 42,000,000 cubic feet, and to build a power-house below the bottom of the falls, so that a total drop of nearly 1,000 feet would be obtained for the volume of water. It is estimated that by this means hydro-electric power to the extent of 100,000 horse-power could be produced. The cost of the scheme will be about £3,000,000. The beauty of the famous falls, it is claimed, will be entirely unimpaired.

RAILWAY ACROSS THE ANDES.—The Bolivian Government has authorised the construction of the long-proposed railway from La Quisaca, on the Argentine border, to Atocha, in Bolivia, a distance of 226½ miles. It will be the completing link of an all-rail route between Buenos Aires, the capital of Argentine, and La Paz, the capital of Bolivia, and in its final form it will offer a second and alternative way by rail over the Andes. The cost is estimated to be £2,400,000.

READING BY THE EAR.—An instrument which enables a blind person to read by means of a sound alphabet was exhibited at the Physical and Optical Society. The optophone, as it is called, is the invention of Dr. Fournier d'Albe, and has been developed by Messrs. Barr and Stroud. It produces in a telephone receiver a series of musical notes forming tunes or musical motifs representing the various letters on a printed page as they are passed over by the instrument. The optophone depends for its action on the chemical element selenium, the telephone receiver, and an electric battery. A

prepared tablet called the selenium bridge is exposed to successions of sets of light pulsations, which vary according to the forms of letters; the form of each letter enables it to sing its own little tune, and in this way printed letters are translated into a sound alphabet.

READING IN BED.—Lieut.-Col. R. H. Elliott, lecturing at the Institute of Hygiene, said that there was no reason why reading in bed should be more harmful than reading at a desk. Ages ago the ancestor of man and the higher apes developed the use of the opposing thumb, which, used in opposition to the fingers, enabled its possessor to pick up and study the objects that lay around him. The objects studied were always held below the level of the eyes, and thus, all through the ages, the muscles that depress the eyes had been more called upon than those which raised them. To-day the latter are weaker than the former, and are much more liable to tire when the eyes are directed upwards. Hence the evil of lying on the back in bed reading a book. If we went to the Royal Academy and looked up at the pictures for two or three hours we came away with a headache. Many found the same effect after sitting in the stalls of a theatre or a cinema. It would be much better if the picture galleries could be arranged so that we could look down at the pictures from above.

ROCKALL.—Dr. J. Charcot, the French Polar explorer, succeeded in landing from his exploring vessel, the "Pourquoi Pas," on the islet of Rockall, which lies 225 miles from St. Kilda and 260 miles west of the Hebrides. He obtained many geological specimens from the rock. Rockall rises like a needle 75 feet high from a shallow bank which has more than once been harmful to shipping, and has only been visited on five previous occasions.

RUBBER-GROWING IN THE DESERT.—Dr. Daniel T. MacDougal, Director of the Botanical Research Department of the Carnegie Institution at Washington, as the result of five years' experiment in Arizona, claims to have domesticated the guayule, or wild rubber plant of Mexico. He organised the experiment on a 600-acre tract of desert near Tucson. He foresees the day when the guayule will furnish regular crops of rubber in the desert state on a scale that will affect the market of the world.

SELF-STOPPING TRAINS.—An apparatus to prevent railway collisions was successfully demonstrated on the Brighton Railway by Mr. A. R. Angus, its inventor. Two engines and a section of the railway line were fitted with the apparatus, and an attempt was made to run one engine into the other. On arriving at the danger zone the whistle sounded, brakes were applied, steam was shut off, and the engines pulled up without any action by the driver or fireman. The inventor claims that the system, which is automatic, provides for all possible traffic operations that a train can run safely through a fog, is warned of an approaching curve or of the safety of the points the engine has to negotiate, and also corrects signalman's errors, and provides against failure of the automatic brakes.

STONE AGE SHEPHERD.—An exhibition of weapons and tools made by prehistoric Britons at Graig Lwyd, Penmaenmawr, was held at the Society of Antiquaries. The implements were used for felling trees, skinning animals, and settling arguments; they were mostly in a rough state of manufacture. The owner of the

collection is Mr. S. H. Warren, F.G.S., of Loughton. In 1892, when on holiday at Penmaenmawr, Mr. Warren and his wife discovered some old pieces of stone which apparently dated back to an early age. They returned to the spot later with Mr. I. Wilfred Jackson, geologist of Manchester University, and a digging party, and as a result the present collection was found in a small area of about 30 feet by 50 feet. Graig Lwyd, Mr. Warren said, was a kind of Sheffield of the Stone Age. The manufacture of all kinds of implements was carried out on quite a large scale, from the igneous rock which is still quarried there. Very few of them were found in a finished state, unless broken and discarded. There was no indication as to the date of the stones, but it must have been somewhere about 2000 B.C.

SUBMARINE MAGNET.—In the Albert Dock, Silvertown, a demonstration was given by the Neale Magnet Construction Company of the Neale submarine electro magnet. The instrument is octagonal in shape, 3 feet in width, between opposite sides, $2\frac{1}{2}$ inches in depth, and weighed 7 cwt. Operating it was a current of 16 amperes at a pressure of 250 volts. Swinging from a crane the magnet held and raised quantities of metal on which it was placed, including three gircons chained together and weighing 2 tons 4 cwt. The crane was turned over the water, which was 36 feet in depth, the load was deposited gently on the bed of the dock, and the magnet left it there for a time, and then was swung back so as to descend again on the girders, which it picked up and lifted to the bank. It is claimed that this British invention can be used for the recovery of anchors and chain cables, the rapid loading and unloading of steel sections from rolling mills to railway trucks, and thence to ships' holds, the discharging of metallic ores, the lifting of machinery, although encased in wood, and the recovery of metal which has formed part of war wrecks sunk round the coast and dispersed by explosions in order to remove obstructions to shipping.

SUGAR FROM THE DOUGLAS FIR.—Long before the first white man came to North America the Indians of at least one district of that great continent had a white sugar of a very rare and high quality, a sugar derived from the strangest and an almost unbelievable source—from the foliage of the Douglas fir tree growing in certain districts in the Province of British Columbia. The sugar is still there on the leaves of the Douglas fir to be gathered by anyone who knows where to look for it. According to the researches of Prof. John Davidson, of the University of British Columbia, Vancouver, there are certain hot and dry regions where the Douglas fir produces on its leaves drops of white sugar of appreciable size and remarkable purity. To produce that sugar the trees must be growing on a north-eastern slope, where their leaves are bathed in sunshine, but the soil is not baked into the dryness of a western slope. Where favourable conditions exist the trees produce more carbo-hydrates than they need or can consume, which are converted into water containing a large quantity of sugar in solution and the leaves become water-gorged. The water quickly evaporates and the sugar remains to form drops of syrup of sizes varying from $\frac{1}{2}$ inch to 2 inches in diameter, some of them being so large that they fall on branches and foliage below, resulting in irregular deposits.

SURGICAL NEEDLES.—Mr. H. S. Souttar, director of the surgical unit of the London Hospital, has invented and patented a needle which overcomes the difficulties of threading in the surgical needles in general use. The ordinary eye, as in the housewife's sewing needle, is a faulty method of attachment, for the obvious reason that it necessitates the drawing of a loop of stiff material through the small puncture made by the needle itself. Mr. Souttar's needle consists of the usual steel body and point, and can be shaped exactly as any other needle, but instead of the eye there is a small length of tubing fitted so exactly on to the steel body that any trace of a join can with difficulty be ascertained by the touch. The ligature is fastened inside the tube, and as it is exactly the same size as the needle itself there is neither drag nor pull in its use.

TORCH UNDER WATER.—The French Navy, during the recovery of materials from ships sunk during the War, has improved the oxy-acetylene torch of Picard so that it may be used under water. The addition which has rendered this possible is a small bell-shaped vessel surrounding the oxy-acetylene flame, which is kept supplied with compressed air. After the flame is alight and the stream of compressed air established the torch may be plunged into water without being extinguished. If by any accident it was extinguished it was necessary for the diver to ascend to the air to light it again. M. Corne has made a further addition to the torch which makes it unnecessary to ascend to relight it. A tube containing an alkaline metal and an oxidiser is attached to the torch and can be moved to the mouth of the bell. On removing the cap from the end of the tube the chemical action of the water on the mixture produces a flame which relights the torch.

WOODEN DISC WHEELS.—Wheels with discs of laminated wood are being manufactured at Dayton, Ohio, and it is claimed for them that, as compared with spoked wheels, they absorb road shocks over the whole wheel instead of at the felloe only. The discs are built of thin plies of wood fastened together with waterproof glue under pressure, the grain of one layer running in a different direction from that of its neighbours. They are said to be strong, non-warpable, and resilient.

X-RAYS FOR MALARIA.—Dr. Antonio Pais, an Italian scientist, has for some time been experimenting on malaria patients with X-rays. His experiments are based on the action of the X-rays on the enlarged and hardened spleen which forms one of the symptoms of the chronic variety of malaria. It is believed that the affected spleen, being a kind of depository for the malaria germs, can be affected by the rays in such a way to reduce its hypertrophied volume and destroy the bacilli accumulated there. Dr. Pais does not claim that his system is a complete cure, but experts on the subject like Professors Grassi and Golgi have expressed their belief in the value of the experiments.

YELLOW RIVER BRIDGE.—The construction of a new bridge over the Yellow River has now been decided on. It will be 2,800 metres long, with fifty through spans, and fifty-two deck spans, and will carry a single track of rails. A side walk is not to be provided, but refugees will be placed at frequent intervals to enable workmen to escape passing trains.

872 Intestates' Estates, England & Wales and Ireland.

I.—PERSONAL PROPERTY, INCLUDING LEASEHOLDS.

The person entitled to administer is shown in brackets.

In each instance it is supposed there are no nearer relations than those named.

By the Intestates' Estates Act, 1850, the widow of a man dying intestate and without issue is entitled to the whole estate both real and personal if under £500 in value; if over that amount she takes £500 out of the real and personal estate rateably before any division is made, and after that the share in the remainder to which she was entitled before the passing of the Act.

His representatives take in the proportions following:—

Widow only.....	Half to widow. Half to the Crown. [Widow.]
Widow and child or children	One-third to widow, two-thirds to children in equal shares. In case of deceased children who have left issue, such issue take amongst them their deceased parent's share. [Widow.]
Widow and father.....	Half to widow. Half to father. [Widow.]
Widow and mother, no father	Half to widow. Half to mother. [Widow.]
Widow, brothers or sisters	Half to widow. Half equally amongst brothers and sisters, whether of the whole or half blood; if a deceased brother or sister has left issue, such issue take amongst them their deceased parent's share. [Widow.]
Widow, mother, nephews or nieces	Half to widow. One-fourth to mother. One-fourth to nephews and nieces <i>per stirpes</i> . [Widow.]
Husband, with or without children	All to husband. [Husband.]
Father, brothers, and sisters	All to father. [Father.]
Mother, brothers, and sisters	All equally. [Mother.]
Mother, but no other kin	All to mother. [Mother.]
Children, and grandchildren by deceased children	Amongst children in equal shares, the grandchildren taking amongst them their deceased parent's share. [Any number of children not exceeding three.]
Brother or sister, and nephews or nieces.. ..	Amongst brothers or sisters in equal shares, the children of deceased brothers or sisters taking amongst them their deceased parent's share. [Brother or sister.]
Brother or sister, and grandfather.....	All to brother or sister. [Brother or sister.]
Brother or sister, and uncles or aunts	All to brother or sister. [Brother or sister.]
Grandfather, no nearer relation	All to grandfather. [Grandfather.]
Father's father, and mother's mother	Equally to both. [Either or both.]
Grandmother, uncles, and aunts	All to grandmother. [Grandmother.]
Great-grandfather, uncles, and aunts	Equally <i>per capita</i> . [To either or any number not exceeding three.]
Uncles and aunts	All equally. [To either or any number not exceeding three.]
Uncle, and deceased uncle's child	All to uncle. [Uncle.]
Uncle by mother's side, and deceased uncle or aunt's child	All to uncle. [Uncle.]
Aunts, nephew, and niece	All equally. [Either not exceeding three.]
Cousins	Equally <i>per capita</i> . [Any number not exceeding three.]
Nephew by brother, and nephew by half-sister...	Equally <i>per capita</i> . [Any number not exceeding three.]

NOTE A.—Taking *per capita* is taking by head individually. Taking *per stirpes* is taking by descent or representation. Thus, if A. die leaving three brothers or sisters, and no nearer kin, they each take an equal part of his personal estate in his or her own right, *i.e.*, *per capita*. If there are also children of a deceased brother or sister they share in the estate by taking amongst them the share which their deceased parent would have taken had he or she survived, *i.e.*, *per stirpes*.

NOTE B.—By English Law, brothers and sisters of the half blood share equally with the whole blood.

II.—REAL PROPERTY.

(N.B.—Leaseholds are Personal Property.)

Table of Descent of Real Property in England & Wales and Ireland on death of an intestate. No illegitimate child is capable of inheriting real estate. Custom of *Gavelkind* (descent to all sons alike) still exists in Kent, and custom of *Borough English* (descent to youngest son) in divers ancient boroughs. The Dower (*viz.*, widow's thirds) of widows married since 1133 is in the majority of cases barred.

In each instance it is supposed there are no nearer relations than those named.

<i>If Intestate die, leaving</i>	<i>Real Property would descend to—</i>
Wife only, no blood relations	One-third to wife for life, rest to Crown; copyholds to lord of manor.

If Intestate die, leaving

Real Property would descend to—

Wife and child or children, and children of a deceased child.....

Wife and father.....

Wife and mother.....

Wife, brother, or sister, and children of a deceased brother or sister.....

Wife, mother, nephews, and nieces.....

Wife, mother, brother, sisters, and nieces (children of deceased brothers and sisters).....

No wife or child or issue of a deceased child.....

Children by one or more wives, and the issue of deceased children.....

Husband and child or children...

Mother, but no wife, child, or issue of a child, father, brother, sister, nephew, or niece, or more distant descendants of father...

Mother, and brothers and sisters

Mother and sisters.....

Father, and brothers and sisters

Child and grandchild by deceased child.....

Brother and grandfather.....

Brother's grandson, and brother or sister's daughter.....

Brother and two aunts.....

Brother and wife.....

Grandfather (no nearer).....

Father's father & mother's mother

Grandmother & uncle, or aunt on father's side (no nearer).....

Uncle, and deceased uncle's child.....

Uncle by mother's side, and deceased uncle or aunt's child...

Two aunts, nephew, and niece, children of deceased brother...

Uncle or aunt's children, and brother's grandchildren through a son.....

Nephew by brother, and nephew by half-sister.....

Nephew by deceased brother, and nephews and nieces by deceased sister.....

One-third to wife for life in any case.
 Rest to eldest son or his issue, such son and his issue, whether male or female, being preferred to any other son and his issue, and all sons and their issue, whether male or female, being preferred to all daughters and their issue, whether male or female.
 If no son, rest to daughters equally.
 If daughters and grandchildren (sons and daughters of deceased daughter), rest to daughters and eldest son of deceased daughter.
 One-third to wife for life; rest to father, if deceased purchased same, or had it left him by will.
 One-third to wife for life; rest to mother, there being no heirs on father's side.
 One-third to wife for life in any case, rest to eldest brother or his issue. (See above, "Rest to eldest son or his issue," under head "Wife and child," &c.)
 Sister and children of deceased sister, rest equally between sister and nephew (eldest).
 Sisters and nieces, only, children of deceased sister, rest equally between sisters and nieces, nieces taking *per stirpes*.
 One-third to wife for life; rest to nephew (eldest), or nieces, if brother left no son.
 One-third to wife for life in any case; rest to eldest brother. Rest to nieces, equally, if children of elder brother deceased.
 Lineal ancestor paternal, males of whole blood first.
 All to eldest son, or his issue. (See above, "Rest to eldest son or his issue," under head "Wife and child," &c.)
 Daughters equally.
 Husband for life (provided the wife, or the husband in her right, was at some time during the coverture solely seized in possession of the legal or equitable estate); afterwards to only child or to eldest son or issue of a deceased eldest son.
 If all daughters, to them equally.
 All to mother in default of lineal ancestors on the father's side, or issue of such ancestors.
 All to eldest brother.
 All to sisters.
 All to father.
 See above, "Rest to eldest son or his issue" under head "Wife and child," &c.
 All to brother.
 All to great-nephew, if eldest brother's grandson.
 All to brother's daughter, if child of eldest brother.
 Brother, all.
 One-third to wife for life; rest to brother.
 All to grandfather.
 All to father's father.
 All to uncle or aunt.
 Uncle, unless deceased uncle was elder brother, when his child takes all.
 Child of deceased uncle on father's side, or (if none) child of deceased aunt on father's side.
 Nephew.
 Eldest brother's grandson, or if granddaughters between them equally.
 Nephew by brother.
 All to eldest nephew, son of deceased brother.

NOTE A.—By the Land Transfer Act, 1897, the real estate of a deceased person devolves to the personal representative of the deceased, and probate and letters of administration may be granted in respect of real estate only, although there is no personal estate. The ultimate ownership of real estate is not affected by these provisions, which are for the convenience of administration. As to the persons entitled to administration of real estate, they are substantially the same as in the case of personal estate; but the Court shall, in granting letters of administration, have regard to the rights and interests of persons interested in the real estate, and the heir-at-law, if not one of the next-of-kin, shall be equally entitled to the grant with the next-of-kin.

Intestates' Estates, Scotland

I.—MOVABLES.

In each instance it is supposed there are no nearer relations than those named.

By the Intestate Husband's Estate (Scotland) Act, 1911, the widow of a man dying intestate and without issue is entitled to the whole estate both heritable and movable if under £500 in value; if over that amount she takes £500 out of the heritable and movable estate rateably before any division is made, and after that the share in the remainder to which she was entitled before the passing of the Act.

If the Intestate die, leaving

His representatives take in the proportions following:—

Widow only	Half to widow, half to next of kin, or if none, then to the Crown.
Widow and child or children	One-third to widow. Remaining two-thirds to child or among children equally.
Widow and children and issue of predeceasing children	One-third to widow, one-third to living children equally, remaining third amongst living children <i>per capita</i> * and issue of deceased children <i>per stirpes</i> .*
Widow and father	Half to widow, half to father.
Widow and mother, no father	Half to widow, one-half to mother.
Widow, brothers or sisters	Half to widow, half equally amongst brothers and sisters whether of the whole or half blood consanguinean. If a deceased brother or sister has left issue, such issue take amongst them their deceased parent's share.
Widow, mother, nephews or nieces	Half to widow, one-half to mother.
Husband, with or without children	Half to husband, half to wife's next of kin.
Father and mother	Whole to father
Father, mother, brothers and sisters	Half to father; half to brothers and sisters equally.
Father and mother and their grandchildren	Half to father; half to grandchildren equally <i>per stirpes</i> .
Father, brothers and sisters	One-half to father, one-half equally amongst brothers and sisters.
Mother, brothers and sisters	Mother one-half, brothers and sisters one-half equally.
Mother, but no other kin	Whole to mother.
Child, children or grandchildren by deceased children	Amongst children in equal shares, the grandchildren by deceased children taking amongst them their deceased parent's share.
Brothers or sisters and nephews or nieces	Amongst brothers or sisters in equal shares, the children of deceased brothers or sisters taking amongst them their deceased parent's share.
Brother or sister and grandfather	All to brother or sister.
Brother or sister and uncles or aunts	All to brother or sister.
Grandfather, no nearer relation ...	All to grandfather.
Father's father and mother's mother	All to father's father.
Grandmother, uncles and aunts ...	All to uncle and aunts, if paternal.
Great-grandfather, uncles and aunts	All to uncles and aunts, if paternal; if not, then to paternal great-grandfather.
Uncles and aunts	All equally.
Uncle and deceased uncle's child ...	All to uncle.
Uncle by mother's side, and deceased uncle or aunt's child	Child of deceased paternal uncle or aunt takes to exclusion of maternal uncle.
Aunts, nephew and niece	Nephew and niece.
Cousins	Equally <i>per capita</i> .*
Nephew by brother, and nephew by half-sister	All to nephew by brother.

NOTE A.—Illegitimate children do not succeed to their father or mother as heirs in intestacy.

NOTE B.—In Scotland, a lease on intestacy and in the absence of any destination descends to the heir-at-law.

NOTE C.—When a person dies intestate leaving heritable estate as well as movables, the heir to the heritable, if he is also one of the next-of-kin, is not entitled to any of the movables if he takes the heritable. He may, however, "collate" the heritable, i.e., share it with the other next-of-kin and thus get an equal share of the mixed estate.

* *Per Capita* means by the head; *per stirpes* means inheriting through a parent deceased. Movables taken *per capita* divide into as many shares as there are children. Where representatives of a deceased parent take *per stirpes* they take equally amongst them the share that would have fallen to the deceased, had he or she survived.

II.—HERITAGE.

Table of Succession to heritable property in Scotland on intestacy and in the absence of any destination in the property writs, other than "to heirs and successors."

In each instance it is supposed ~~these~~ are no nearer relations than those named.

*If Intestate die leaving**Heritage would descend to:—*

- | | |
|---|--|
| (1) Wife only; no blood relations. | One-third to wife for life; rest to Crown as <i>ultimus haeres</i> . |
| (2) Wife and child or children, and children of a deceased child... | One-third to wife for life. Fee to eldest son or his heir male. If no son then to daughters equally. The eldest son of a deceased daughter taking his mother's place. |
| (3) Wife and father | One-third to wife for life, rest to father. |
| (4) Wife and mother | One-third to wife for life. Fee to nearest heir male. |
| (5) Wife, brother, or sister, and children of a deceased brother or sister | One-third to wife for life. Fee to immediate younger brother and his heir male; if none, then to immediate elder brother. |
| (6) Wife, mother, nephews and nieces | One-third to wife for life; rest to nephew (eldest) or nieces equally if brother left no son. See No. 2. |
| (7) Wife, mother, brother, sisters and nieces (children of deceased brothers and sisters)... | One-third to wife for life; rest to younger brother and his heirs. If the only heirs are nieces they will take equally. If no younger brother then to immediate elder brother and his heirs in the same way. If sisters but no brothers the sisters take equally, and if the sisters have predeceased leaving only daughters they succeed equally. |
| (8) No wife or child or issue of a deceased child | To brother as in (5) whom failing to lineal ancestor paternal and his heirs. |
| (9) Children by one or more wives and the issue of deceased children | All to eldest son or his issue. If no male issue then to female issue as in (5). |
| (10) Husband and child or children | Liferent of whole to husband. Fee to eldest son. |
| (11) Mother, but no wife, child or issue of a child, father, brother, sister, nephew or niece or more distant descendants of father | Nearest paternal collateral (uncle or his heirs). If none, then to grandfather and his heirs |
| (12) Mother and brothers and sisters | All to younger brother whom failing to immediate elder brother. |
| (13) Mother and sisters | All to sisters equally. |
| (14) Father and brothers and sisters | Fee as in (5). |
| (15) Child and grandchild by deceased child | (See No. 2.) "Rest to eldest son or his issue," under head, "Wife and child," etc. |
| (16) Brother and grandfather | All to brother. |
| (17) Brother's grandson, and brother or sister's daughter | All to great-nephew, if grandson of brother (conforming to Nos. 2 and 7). All to brother's daughter, if child of eldest brother. |
| (18) Brother and two aunts | Brother, all. |
| (19) Brother and wife | One-third to wife for life; rest to brother. |
| (20) Grandfather (no nearer) | All to grandfather. |
| (21) Father's father and mother's mother | All to father's father. |
| (22) Grandmother and uncle, or aunt on father's side (no nearer) | All to uncle or aunt. |
| (23) Uncle and deceased uncle's child | If deceased uncle was younger brother, then to child. If both brothers older than intestate, then to the younger of them or his heir male. |
| (24) Uncle by mother's side, and deceased uncle's or aunt's child | Child of deceased uncle on father's side, or (if none) child of deceased aunt on father's side. |
| (25) Two aunts, nephew and niece, children of deceased brother | Nephew. |
| (26) Uncle or aunt's children, and brother's grandchildren through a son | Brother's grandson, or if granddaughters between, then equally (conforming to Nos. 2 and 7). |
| (27) Nephew by brother, and nephew by half-sister. | Nephew by brother. |
| (28) Nephew by deceased brother, and nephews and nieces by deceased sister | All to eldest nephew, son of deceased brother. |

NOTE.—In Scotland succession to heritage on intestacy NEVER ascends to the mother and her relations. Even the mother's own estate after vesting in her son or daughter, never ascends to the maternal line again.

Assay Office Marks.—The official marks stamped on gold and silver plate at Goldsmiths' Hall, London, or at the Assay Offices at Birmingham, Chester, Sheffield, Edinburgh, Glasgow or Dublin, are distinguished as under:—

Assay Office ...	Distinguishing Mark.
London	Leopard's Head (crowned, until 1853).
Birmingham...	Anchor (square frame for gold; pointed shield for silver).
Chester	City Arms (3 Garbs and a Sword).
Sheffield	Crown.
Edinburgh.....	Castle.
Glasgow	Tree, Fish & Bell.
Dublin	Harp crowned.

In addition to the above, there have been Assay Offices at Bristol, Exeter, Newcastle-upon-Tyne, Norwich and York, all of which have long been closed.

Makers' Mark (instituted in 1363).—This is impressed by the maker, and consists of initial letter (or letters) indicating the Surname (or Christian and Surname) of the maker.

Date Mark.—The year in which the article is marked at the Assay Office is indicated by a letter on a shield, the *type of letter* and the *shape of the shield* being changed in cycles of 20, 25 or 26 years. In 20-year cycles (London, invariably, Chester, alternately with 25, and Sheffield, alternately with 25), the letters J, V, W, X, Y, Z are omitted; in 25-year cycles (Birmingham, Edinburgh and Dublin, and alternately at Chester and Sheffield) the letter "j" is omitted from the alphabet; at Glasgow all the letters are employed in a 26-year cycle.

The Sovereign's Mark.—The "lion passant" introduced in the reign of Edward I. (1300) for silver articles only.

The Sovereign's Head.—The portrait of the reigning Sovereign was impressed on all plate chargeable to duty assayed from 1784—1880-90. The duty on plate was removed in 1890, and the Sovereign's head does not appear on plate assayed before 1784 or after 1890.

The Crown.—On gold articles only, in lieu of the "lion passant" on silver.

Britannia.—A full-length figure of Britannia was impressed on silver plate of a special standard of fineness (12 oz. 20 dwt. of fine metal to each 10 dwt. of alloy) during a short period only, 1697-1720.

Sterling Silver.—Articles of silver plate marked at an assay office are guaranteed to be of the requisite standard of purity and to contain 12 oz. 2 dwt. of fine metal to each 18 dwt. of alloy.

Sterling Gold.—Articles of gold plate marked at an assay office are guaranteed to contain such amount of pure gold as is marked thereon by the assaying office in carats and decimals thereof. The relative values of the various standards is shown below:—

	£	s.	d.
Pure gold, 24 carats.....	4	4	11½
Standard, 22 carats.....	3	17	10½
and ditto, 18 carats.....	3	3	8½
2rd ditto, 15 carats.....	2	13	1
4th ditto, 12 carats.....	2	8	5½
5th ditto, 9 carats.....	1	11	10½

* For the greater part of the material for this article readers of the ALMANACK are indebted to the late Mr. Wilfrid Cripps (author of "Old English Plate") by whose courtesy also many of the illustrations were provided.

	Roman letter, small...	1896-7 „ 1915-6
	Old English, small	1916-7 „ 1935-6

The Collector will find but little difficulty in distinguishing a letter of one cycle from that of another, presuming his knowledge to be sufficient to judge by the style and period of the article itself, e.g.:

An article marked with the letter F 1756-6 can be distinguished from letter F 1801-2 by the difference in the shape of the respective shields; as also those containing the crowned leopard's head and the lion passant; the absence of the sovereign's head in the former as against its presence in the latter case; the different form of the leopard's head (which was "crowned" until 1823); and lastly, the irregularity of the stamp in the first case as compared with the uniformity of the latter stamp. These again can be distinguished from F 1881-2 as before, by the different shield of the date letter only (the shields of the remaining marks being the same as those of 1801-2); the absence of crown on leopard's head, and the presence of the Queen's vice the King's head.

Imported Plate.

Any gold or silver plate or article manufactured out of the United Kingdom and brought to be assayed, stamped or marked at a British or an Irish Assay Office must be marked in the manner prescribed by the Order in Council of May 11, 1906, under which the mark for each Assay Office is ordained to be:—*London*, the sign of the Constellation Leo; *Birmingham*, Equilateral Triangle; *Chester*, Acorn and two leaves; *Sheffield*, the sign of the Constellation Libra; *Edinburgh*, St. Andrew's Cross; *Glasgow*, double block letter F inverted; *Dublin*, Boujet. The annual date letter is to be added by the Assay Office, as for plate, etc., of home manufacture.

The Periods of English Architecture

Date.	
I. Before B.C. 55	Ancient British.
II. B.C. 55 to A.D. 410	Roman Period.
<i>Rickman</i>	
III. A.D. 449 to Norman Conquest (1066)	Anglo-Saxon.
IV. 1066-1154 (i.e. to end 12th cent.)	Norman.
V. 1154-1307 (i.e. 13th cent.)	Early English, Lancet, or Geometrical.
VI. 1307-1397 (i.e. 14th cent.)	Decorated or Curvilinear.
VII. 1397-1485 (i.e. 15th cent.)	Perpendicular or Rectilinear.
VIII. 1485-1558 (i.e. first half 16th cent.)	Tudor.
<i>Elizabethan (A.D. 1558-1603).</i>	
IX. A.D. 1558-1605 Early Renaissance	Jacobean (A.D. 1603-1625).
<i>Anglo-Classic (A.D. 1625-1702).</i>	
X. A.D. 1625-1830. Late Renaissance	Queen Anne and Georgian (A.D. 1702-1836).
<i>William IV. (A.D. 1830-1837).</i>	
<i>Victoria (A.D. 1837-1901).</i>	
<i>Edward VII. (A.D. 1901-1910).</i>	
<i>George V. (A.D. 1910-)</i>	
19th cent. to present time	Modern Architecture (The Age of Revivals)

This Comparative Table shows the approximate period of each style. It must, however, be remembered that the transition from one style to the next was slow and gradual, and can often hardly be traced, so minute are the differences. It is only for convenience in alluding to the different stages of evolution that the division is made, for it must not be forgotten that the Architecture of England is one continuous development.

Note.—The first portion (I-VIII) of this table is based upon that given on p. 227, and Parts IX, X, and "Modern" on p. 231, of "A History of Architecture on the Comparative Method" (1st ed.), by Sir Banister Fletcher. (Batsford.)

Close-Times for Game, Wild Birds, and Fish.

CLOSE SEASON FOR GAME, WILD BIRDS, &c.

It is illegal to pursue the different kinds of game between the following dates (Inclusive):—

GAME.	ENGLAND.	SCOTLAND.	IRELAND.
Black Game or Heath Fowl.	11 Dec. to 19 Aug. (31 Aug. in Somerset, Devon, and New Forest).	11 Dec. to 19 Aug.	11 Dec. to 19 Aug.
Bustard	1 Mar. to 31 Aug.	None.	11 Jan. to 31 Aug.
Deer, Male.	None.	None.	1 Jan. to 9 June.
„ Fallow Male.	None.	None.	Michaela.
*Grouse or Red Game.	11 Dec. to 11 Aug.	11 Dec. to 11 Aug.	11 Dec. to 11 Aug.
*Hare	None.	None.	10 Apr. to 12 Aug.†
*Heath or Moor Game.	None.	As "Muir-fowl."	11 Dec. to 11 Aug.
Landrall, Quail.	As "Wild Birds."	As "Wild Birds."	11 Jan. to 19 Sept.
*Muirfowl, or Ptarmigan.	None.	11 Dec. to 11 Aug.	11 Dec. to 19 Aug.
*Partridge.	1 Feb. to 31 Aug.	1 Feb. to 31 Aug.	1 Feb. to 31 Aug.
*Pheasant.	1 Feb. to 30 Sept.	1 Feb. to 30 Sept.	1 Feb. to 30 Sept.

† Subject to variation in various counties. e.g. Tyrone, 1 Apr. to 12 Aug.; Dublin, 1 Mar. to 30 Sept.

It is also unlawful to kill the game marked * on a Sunday or Christmas Day.

In England hares, rabbits, woodcock, snipe, quail, landrall, and heath or moor game (and the eggs of swan, wild duck, teal, and widgeon) are protected under the Game Laws, though no close-time is fixed for them by those laws. In Scotland the same remarks apply to deer and hares, to the first four birds, and to wild duck; in Ireland to all these five birds, with the further addition of widgeon, teal, and plover. The close-time for all these birds (except quail and landrall) in Ireland, for whose close-time see above) is, under the Wild Birds Protection Acts, 1880 to 1908, from 1 March to 31 July, both inclusive. Otherwise this close-time applies to all wild birds throughout the United Kingdom. The penalty for killing any wild bird in such close-time, or for selling or having in possession between 15 March and 31 July, both inclusive (unless the killing can be proved to have occurred at a time and place to which the Act does not apply), is a reprimand and costs for the first offence, and 5s. and costs for each bird for every subsequent offence, or, in the case of the undermentioned birds, 5s. for each bird for each offence. In any case the Court may also order the forfeiture of any bird (or egg, where protected—see next column) in respect of which the offence was committed. In the Island of St. Kilda the fork-tailed petrel and St. Kilda wren are deemed to be included in the following list, and the birds marked † to be omitted.

American quail.	Kittiwake.	Scout.
Auk.	Lapwing.	Sealark.
Avocet.	Lark.	Seamew.
Bee-eater.	Loon.	Sea parrot.
Bittern.	Mallard.	Sea swallow.
Bonxie.	Marrot.	Shearwater.
Colin.	Merganser.	Sheldrake.
Cornish chough.	Murre.	Shoveller.
Coultarneb.	Night-hawk.	Skua.
Cuckoo.	Night-jar.	Smew.
Curlew.	Nightingale.	Snipe.
Diver.	Oriole.	Solan goose.
Dotterel.	Owl.	Spoonbill.
Dunbird.	Ox-bird.	Stint.
Dunlin.	Oyster-catcher.	Stone curlew.
Elder-duck.	Peewit.	Stonehatch.
Fern-owl.	Petrel.	Summer snipe.
† Fulmar.	Phalarope.	Tarrock.
† Gannet.	Plover.	Teal.
Goatsucker.	Ploverpage.	Tern.
Godwit.	Pochard.	Thicknee.
Goldfinch.	† Puffin.	Tystey.
Grebe.	Purre.	Whaup.
Greenshank.	† Razorbill.	Widgeon.
† Guillemot.	Redshank.	Wild duck.
Gull (except black-backed).	Reeve or Ruff.	Willock.
Hoopoe.	Roller.	Wimbreel.
Kingfisher.	Sanderling.	Woodcock.
	Sandpiper.	Woodpecker.

Offenders refusing their names and addresses are liable to a further penalty of 10s., but the Acts do not apply to any person shooting on his own land, or authorising anyone so to shoot, any wild bird not included in the above list.

On the application of the local authorities, the Secretary of State in England and Wales, the Secretary for Scotland in Scotland, or the Lord Lieutenant in Ireland, has power to vary or abolish the close-time for any bird or birds in any county by order to be published in the *Gazette*. They may also direct that the above enactments shall apply to any wild bird not specified in the list, and may further prohibit the taking of the eggs of any wild bird in any county or part thereof. The Secretary of State in England and Wales, or the Secretary for Scotland, may also on the application of the local authorities make an order providing that in any specified area the taking or killing of any particular kinds of wild birds shall be illegal during any period specified in the order. These various powers have been exercised in many cases—too numerous to recapitulate here.

Penalties are imposed on persons setting springs, gins, &c., on poles, trees, mounds, &c., so as to injure wild birds. Persons permitting such acts are equally liable. The use of a hook or like instrument for taking wild birds is forbidden.

HUNTING AND GROUND GAME.

There is no statutory close-time for fox-hunting or rabbit-shooting, nor is there, except in Ireland, for deer or hares; but there is an "unwritten law" which the sportsman respects as much as he does the enactments of Parliament. 1 November is the recognised date for the opening of the fox-hunting season, which continues till the following April. Otter-hunting lasts from mid-April to mid-September. The period for deer-hunting or stalking varies from about 12 Aug. to 12 Oct. for stags, and from 20 Nov. to the end of March for hinds. By an Act passed in

regulate the sale of hares or leverets in Great Britain is prohibited from March to July inclusive under a penalty of a pound. This does not apply to foreign hares. The statutory close season for hares in Ireland has been varied for some counties by order of the Lord Lieutenant, and it is now mostly from 1 April to 12 August.

ANNUAL CLOSE-TIME FOR SALMON.

I. ENGLAND AND WALES (including the Esk in Dumfries). The close time for salmon (including all migratory fish of the genus salmon) begins, for nets, on 1 Sept., and for rods on 1 Nov.; for both nets and rods it ends on 1 Feb. For putts and putchers the annual close season is from 1 Sept. to 1 May. By an Act of 1907 the Ministry of Agriculture and Fisheries may make provisional orders varying the law on these and other points. The close-time may also be varied by bye-law by local boards of conservators, provided it begins for nets not later than 1 Nov., with a minimum of 154 days, and for rods not later than 1 Dec., with a minimum of 92 days. The statutory dates have been varied as follows:—

Close-time for	Nets.	Rods.
Frome	1 Aug. to 28 Feb.	1 Aug. to 28 Feb.
Adur	1 Sept. to 1 Feb.	1 Oct. to 1 Feb.
Hampshire††	31 July to 1 Feb.	1 Oct. to 1 Feb.

* Except above Woodbury Road Station, 1 Sep. to 15 April. † Above S. Midford. ‡ Below Old Sandfield for nets. For rods these dates do not apply in R. Eden above Irling Foot, or in R. Emsay. § Below Lostwithiel only. ¶ Except R. Erme, 20 Sept. (rods 30 Nov.) to 1 Apr. §§ 1 June to 1 Feb. above Tewkesbury Weir. ** 25 Aug. to 25 April for putts and putchers. †† Above Lymington, 1 Dec. to 1 April. ‡‡ East of Needles Light-house, the dates are:—For nets, 1 Sept. to 1 Feb.; for rods, 20 Oct. (Beaulieu Manor, 20 Oct.) to 1 Feb.

No fresh salmon may be sold between 3 Sept. and 1 Feb., except such as come from parts beyond the seas, or as have been taken, if in the United Kingdom, by legal netting. During that period all packages containing salmon consigned by any common or other carrier must be clearly marked with the word "Salmon." Salmon, dried, pickled, or cured abroad, or, if within the United Kingdom, between 1 Feb. and 3 Nov., may be sold after that date. The onus of proof that the fish were caught out of the United Kingdom, or, if within the kingdom, that they were caught during the legal netting season by legal means, or that, if pickled, they were pickled between 1 Feb. and 3 Nov., lies with the person selling or exposing for sale. The exportation of salmon from any part of the United Kingdom is prohibited between 3 Sept. and 30 April, unless caught at a time at which its sale in the place where it was caught would be legal, if in the United Kingdom: the *onus probandi* lies on the person exporting. The capture and sale of "unclean" salmon, i.e., salmon recently spawned or full of spawn, are prohibited under heavy penalties. Roe may not be used as a bait in salmon angling.

II. SCOTLAND (exclusive of the Esk in Dumfries). The annual close-time must not be less than 168 days. It is, for nets, 27 Aug. to 10 Feb., and, for rods, 1 Nov. to 10 Feb., except as follows:—

Close-time for	Nets.	Rods.
Tay*	21 Aug. to 4 Feb.	16 Oct. to 14 Jan.*
Add, Aray, Eckalg, N. & S. Esk, Fyne, Ruel, Shira	1 Sept. to 15 Feb.	11 Nov. to 15 Feb.
Rivers of Rute	ditto	16 Oct. to 15 Feb.
Canon	—	16 Oct. to 25 Jan.
Awe, Beaul, Spey, Dunbeath, Lossie, Brora, Helmsdale, Kyle of Sutherland, Halladale, Strathly, Naver, Borge, Hope, Polla	—	16 Oct. to 20 Feb.
Forth	—	1 Oct. to 20 Jan.
Bervie, Carradale, Fleet, Garnock, Girvan, Howmore, Inner, Iorsa, Irvine, Luce & rivers of Islay, Orkney, Harris, & Uist	—	1 Oct. to 11 Jan.
Ythan	—	1 Nov. to 14 Feb.
Stinchar	—	1 Nov. to 13 Jan.
Annan, Ugie	20 Sept. to 24 Feb.	1 Nov. to 24 Feb.
Rivers of Shetland	ditto	16 Nov. to 24 Feb.
Nith	ditto	16 Nov. to 24 Feb.
Urr	ditto	1 Dec. to 24 Feb.
Thurso	—	30 Nov. to 24 Feb.
Findhorn	—	6 Oct. to 10 Jan.
Ness	—	22 Oct. to 10 Feb.
Tweed	15 Sept. to 14 Feb.	20 Oct. to 31 Jan.

* Except Earn, rods, 1 Nov. to 31 Jan.

III. IRELAND. The close-time applies to both capture and sale of salmon and trout. The netting close-time must never be less than 200 days, but many variations have been made, which it is impossible to specify in detail here; the following list shows the general close-time (all dates inclusive) in force in the various districts, in parts of some of which, however, it is different. The second column gives the point of delimitation on the coast between the districts, which include all rivers, &c., within the respective coast-limits:—

District.	Coast Limits.	Cl.-T.Net.	Cl.-T.Rod.
Dublin.....	Skerries	16 Aug. to 31 Jan.	1 Nov. to 31 Jan.
Wexford ...	Wicklow	16 Sept. to 31 Mar.	1 Oct. to 14 Mar.

Dundalk ...	Donaghadee ...	13 Aug. to 11 Feb.	16 Oct. to 28 Feb.
Drogheda ..	Clogher Head ..	Do.	16 Sept. to 22 Feb.

WEEKLY CLOSE-TIME.

In England and Wales net-fishing for salmon is prohibited from noon Saturday to 6 a.m. Monday, with an extension to 24 hours in certain districts.

In Scotland, from 6 p.m. Saturday to 6 a.m. Monday, and rod-fishing on Sundays.

In Ireland, from 6 a.m. Saturday to 6 a.m. Monday.

CLOSE-TIME FOR TROUT AND CHAR.

The capture of trout and char in England and Wales is prohibited between 1 Oct. and 1 Feb., except (a) in the Thames and Lee, where the close season is from 11 Sept. to 31 March; and (a) in the cases noted below, where, under an Act of 1876, the close-time (for rods and nets, except where specified) has been varied by bye-law by local boards of conservators. In the districts marked * the close-time applies only to trout. The sale of trout and char is prohibited throughout England and Wales from 1 Oct. to 1 Feb.:—

*Eden	1 Sept. (rods & nets) to 28 Feb.
*Urk	1 Sept. to 14 Feb. ¶

Yorks	1 Oct. to 10 Apr.
*Suffolk & Essex	14 Oct. to 14 Feb. (rods only).
*Dee ¶¶	1 Nov. to 3 Mar. (ditto).
*Coquet	1 Nov. to 3 Mar. (ditto).

In Scotland there is a close-time for trout from 15 Oct. to 28 Feb. In Ireland the close-time for trout is the same as for salmon. For pollen the close-time is from 14 Nov. to 31 Jan.

Between Sept. 3 and Feb. 1 all packages in England and Wales consigned by any common or other carrier and containing trout or char must be distinctly marked with the word "Trout" or "Char," as the case may be.

CLOSE-TIME FOR FRESHWATER FISH.

By the Freshwater Fisheries Act, 1878, a close-time for catching, selling or buying "freshwater fish" (which are defined for this purpose to include all kinds of fish, other than pollen, trout, and

† River Avon between Amesbury and Blotton only; above Amesbury 15 Oct. to 31 Mar.

¶ April 30 between Lostwithiel and St. Wilmow. § Oct. to 30 June from R. Gwili to G.W.R. Bridge.

¶ Oct. to 14 Mar. in certain reservoirs.

** On Thursday preceding Good Friday, whichever date is the earlier.

†† In area of Norfolk Fisheries Provisional Order only; elsewhere in Norfolk close-time for nets 15 Sept. to 25 Feb. ¶¶ Bela Lake 14 Sept. to 14 Jan.

char, which live in fresh water, except those kinds which migrate to or from the open sea) is fixed from 15 March to 15 June, both inclusive, for England and Wales except small parts of Norfolk and Suffolk, under a penalty of £2 for a first and £5 for a subsequent conviction. The close-season, however, does not apply to eels taken otherwise than by angling; or to freshwater fish other than grayling taken in certain private waters by leave of the owner; or to angling in public waters by leave of a board of conservators, or in private waters by leave of the owner; or to taking fish in certain cases for bait or for scientific purposes. Fishery districts may be wholly or partially exempted from this close-time with the sanction of the Ministry of Agriculture and Fisheries. The Axe, Avon (Devon), Wye, Eden, and Towy districts have been so exempted; also the Kent and Bela and Severn as regards pike; the Usk as regards eels; and parts of the Severn as regards fish other than grayling. For eels a separate close-time exists (so far as regards fixed engines in salmon rivers) in England from 1 Jan. to 24 June; in Ireland, with one or two exceptions, from 11 Jan. to 30 June. In the Severn, elvers, or eel fry, are protected between 1 Jan. and the last day of Feb., and between 15 May and 30 June. Certain other local close-times exist for freshwater fish, under local Acts or bye-laws.

PROTECTION OF CRABS AND LOBSTERS.

Under the Fisheries (Oyster, Crab, and Lobster) Act, 1877, it is prohibited to buy or sell crabs under 4½ inches, measured across the largest diameter of the back, or lobsters under 8 inches, measured from tip of beak to end of tail when spread out flat. The capture of "soft" crabs and crabs with spawn is also prohibited. By local bye-laws of Sea Fisheries Committees (*vide infra*), the minimum size of lobsters and crabs

that may be lawfully taken in different parts of the territorial seas has been increased, and in some cases the taking of lobsters with spawn is prohibited, or a close season fixed.

CLOSE-TIME FOR OYSTERS.

There are also local regulations for the protection of oysters; and by the Fisheries (Oyster, Crab, and Lobster) Act, 1877, a close-time for the capture and sale of "Deep-Sea Oysters" is fixed for England and Scotland, but not for Ireland, from 15 June to 4 Aug.; and for all other kinds of oysters—except oysters taken in the waters of a foreign state—from 14 May to 4 Aug. By the Sea Fisheries Act, 1888, fishing for oysters is prohibited from 16 June to 31 Aug. in the English Channel between lines drawn (1) from North Foreland to Dunkirk, and (2) from Land's End to Ushant—the territorial seas of England and France being excepted. This close-time, however, cannot be enforced till the Convention between England and France, included in the Act, is ratified; until that is done, the Convention concluded in 1830, which prohibits oyster-fishing in those limits from 1 May to 31 Aug., remains in force so far as French fishermen are concerned. But both Powers usually agree to suspend the close season till 16 June in each year. In Ireland, taking oysters from licensed beds is larceny; and by 5 & 6 Vict. cap. 106, no oysters may be taken between 1 May and 1 Sept., though this close-season has been varied in the following cases:—

Estuary of Suir.....	1 Jan. to 30 Sept.
Tralee Bay.....	1 Mar. to 30 Sept.
Galway Bay and Carlingford	
Lough.....	1 Jan. to 30 Nov.
Strangford Lough.....	1 Mar. to 31 Aug.
Achill Sound, Clew Bay... ..	1 April to 30 Sept.
Sligo, Ballisodare and	
Drumcliffe Bays.....	1 May to 31 May.

Licences for Shooting and Fishing.

GAME AND GUN LICENCES.—A licence is required by every person who hunts, shoots, or takes game, except persons (in Great Britain) taking woodcock and snipe with nets or springs; proprietors, or tenants, on enclosed land, killing rabbits; persons hunting deer, or hares, with hounds; owners or occupiers, or their servants, killing deer on their own enclosed land; beaters and others, not holding guns, attending holders of game licences. Occupiers of enclosed land, or owners, having the right to kill game, may themselves kill hares, or authorise others to do so, without a licence, but such authority must be limited to one person at a time in any one parish, and must be registered with the clerk of the Justices of the Petty Sessional Division in which the land is situate. Even when the quarry is not what is legally known as "game," a "gun" licence is necessary. A game licence, however, covers a gun licence. Soldiers, sailors, volunteers, or constables, on duty, or at practice, need not take out a gun licence, nor need occupiers of land scaring birds or killing vermin on such land, or persons so acting under the orders of occupiers holding a licence. Unless, however, the occupier is himself licensed, he cannot authorise any unlicensed person to carry a gun. "Scaring" birds is not to be regarded as including killing of any birds, and "vermin" does not include rabbits. The rates of duty are given at p. 422.

FISHING LICENCES.—In all fishery districts in England and Wales, and in Ireland, a licence to fish for salmon is necessary, and in most English

and Welsh rivers a similar licence is necessary for trout or char, except that a salmon licence includes the latter. In the Lune, Derwent, Severn, and Wye and in Norfolk licences for "freshwater fish" are in force. No licence is required for Thames trout or general fish. In Scotland no licence is needed. A licence is available only in the district, and for the season, in which it is issued, except that in Ireland rod licences are available in all parts of that country. The rates on salmon nets and other like instruments range from £50 downwards in England and Wales, and from £30 downwards in Ireland. In the latter country the rate on draft nets, the kind most commonly used, is £3; in England and Wales it varies from £5 to £2. The licence duty on a salmon rod and line is £1 in Ireland. In England and Wales different rates are charged in different districts as follows (an asterisk signifies that lower rates of duty are chargeable for short periods, or for certain parts of the district):—

*Dee, 40/-; *Eden, *Derwent, *Exe, Hampshire, *Wye, *Usk, 30/-; Taw and Torridge, 24/-; *Lune, *Ribble, Clwyd & Elwy, *Conway, *Dovey, *Teify, Avon (Devon), *Dart, *Teign, Frome, Stour (Kent), *Yorkshire, *Tees, *Tyne, 20/-; *Dwyfach, Towy, 21/-; *Selont, Avon, Brue & Parret, Axe, *Camel, *Fowey, 15/-; Cleddy, Taff & Ely, Ogmore, W. Cumberland, 10/6; *Kent & Leven, Rhymney, *Ayron, Severn, Axe, Trent, Tamaz & Plym, 16/-; *Ask (Yorkshire), 7/6; Ouse (Sussex), Wear, Coquet, Cuckmere, *Rother, Adur, 6/-.

Fishery Districts, Boards of Conservators, &c.

ENGLAND AND WALES.—The administration of the laws of close season, &c., for salmon and freshwater fish is placed by the Salmon and Freshwater Fisheries Acts, 1861 to 1909, and the Ministry of Agriculture and Fisheries Act, 1903, in the hands of local boards, with the Ministry of Agriculture and Fisheries as the central author-

qualified by ownership of lands or fisheries of a certain value; and representative members, elected annually by persons who have paid licence duty on instruments other than rod and line for salmon fishing in public waters. In certain cases, under local Provisional Orders, there are also members representative of fresh-

rity. Districts may be formed and Boards of Conservators appointed, and the following districts have been formed, including generally all rivers running into the sea between the points named. Except in the cases marked + they also include the sea for three miles from the shore, or to the mid-channel in estuaries.

These Boards of Conservators consist mainly of three classes of members—those appointed annually by the Councils of the various counties through which the rivers flow; ex-officio members,

water anglers. Districts where Provisional Orders are in force are marked thus *.

There are also certain bodies created by local statutes, having authority over the fisheries, e.g., the Thames Conservancy Board, Port of London Authority, Lee Conservancy Board, and Conservators of the Medway.

The above-mentioned Boards have power to make bye-laws, not only for the regulation of the fisheries for salmon and freshwater fish, but also, in certain cases, for the regulation of other

kinds of fishing which are prejudicial to such fisheries. They are also empowered to issue licences for fishing for salmon, trout, and in some cases freshwater fish generally.

SCOTLAND.—In Scotland there are 103 Fishery Districts, nearly each separate river forming a district of itself, but only 37 Boards of Conservators. The powers of these Boards are limited to the Salmon Fisheries.*

IRELAND.—In Ireland there are 24 districts, embracing between them the whole country, each with a separate Board of Conservators (see p. 830).

SEA FISHERIES DISTRICTS.—Under the Sea Fisheries Regulation Acts, 1853 to 1894, the Ministry of Agriculture and Fisheries has power to form sea fisheries districts within the territorial waters of England and Wales, and to constitute local Fisheries Committees, either for a single county or borough, or for several jointly. These Committees have power to make bye-laws, to be confirmed by the Ministry of Agriculture and Fisheries, regulating or prohibiting the use of

instruments for the capture of sea fish (including shell fish and crustaceans, but excluding salmon), the deposit of rubbish on fishing grounds, &c. The following districts have been created, including in each case the adjoining coast and territorial seas between the points respectively mentioned:—
1. Northumberland (coterminous with that county). 2. North Eastern, from Northumberland to Donna Nook in Lincolnshire. 3. Eastern, Donna Nook to Yarmouth. 4. Kent and Essex, Doverport to Dungeness, including the Thames estuary to London Stone near Yantlet Creek. 5. Sussex (coterminous with that county). 6. Southern, Western boundary of Dorset to Hayling Island. 7. Devon, and 8. Cornwall (each coterminous with the respective counties). 9. South Wales, Eastern boundary of Cardiff to Cemmes Head. 10. Lancashire and Western, Cemmes Head to Haverigg Point. 11. Cumberland, Haverigg Point to Sark Foot.

Similar districts may be formed in Scotland under the Sea Fisheries Regulation (Scotland) Act, 1895.

Seasonable and Unseasonable Fish.

The following table shows the periods when the different kinds of edible fish mostly in use are "in season" and "out of season."

The letter *p* signifies that the fish are then

in their prime or most plentiful; the letter *x* signifies that the fish may be obtained, but are not at their best; the letter *c* signifies that it is "close-time" as fixed by statute.

(a) This is for sea crayfish (or crawfish). River crayfish can be obtained in the summer and autumn. It is illegal to take fresh-water crayfish from March to June.

(b) Foreign oysters can be sold in the close season, and are to be had almost all through the year, even though they have been laid down in English beds for temporary storage.

(c) In the close season, salmon from Holland, and also from certain British rivers where net fishing is permitted later in the year than usual, are largely sold.

(d) For the first six months the bulk of our London supply of shrimps comes from Holland, but Dutch shrimps are far inferior to the English, which are plentiful from July to December.

Staghounds:—England, 9 packs (see couples); Ireland, 8 packs (see couples).
 Foxhounds:—England and Wales, 255 packs (over 4,800 couples); Scotland, 20 packs (see couples); Ireland, 20 packs (see couples).
 Harriers:—England and Wales, 45 packs (545 couples); Ireland, 15 packs (see couples).
 Beagles:—England and Wales, 43 packs (538 couples); Scotland and Ireland, 4 packs (see couples).

West Meath	40	Mr. E. W. Hope Johnstone	Cullinstown, Mullingar.

In the first half of the seventeenth century (1633 has been cited as the best approach to a definite date) we meet with the earliest mention of the introduction of *rails* for the lessening of friction upon roads. Beams of wood, some six or seven inches in breadth, were about this time laid down to facilitate the draught of the wagons in the vicinity of some of the coal-mines at Newcastle; and as a matter of necessity the addition of "sleepers" had speedily to follow. In 1728, at Whitehaven, it is stated that iron was first substituted as the material of the rails; and in 1767 it appears established that this revolution was adopted at Coalbrookdale, being followed nine years later at the Sheffield Colliery. As yet, however, only thick plates of iron were fastened to the surface of the wooden rails, and it was not till 1789 that "edge rails" were introduced, the credit of their adoption being assigned to William Jessop, on the Loughborough and Nantpantan line. James Watt had conceived the idea of utilising steam for locomotion, and there is a record of a model locomotive having been used in Cornwall in 1784. George Stephenson, however, in the year 1825, was the first to bring the project fairly into practical shape.

The first Act obtained for the construction of a railway was that of the Surrey Iron Railway Company in 1801, for a line $\frac{3}{4}$ miles long from Wandsworth to Croydon. In 1804 an Act was passed "for making and maintaining a railway or tramroad from the town of Swansea into the parish of Oystermouth, in the County of Glamorgan, and for the hauling or drawing of wagons or other carriages passing upon the said railway or tramroad with men, horses, or otherwise."

Up to 1840, inclusive, 399 Acts, authorizing the construction of 3,000 miles of line, had been passed. The inevitable reaction set in, and in 1841-2-3 only a few small Bills were passed by the Legislature; but in the Liverpool and Manchester, the London and Birmingham, and other leading concerns were paying 5 per cent. dividends, and some of the smaller lines were yielding even larger returns, attention was naturally drawn to the remunerative character of this class of property, and the supply of railway shares became far below the demand. A flood of new projects appeared before the public, and the Legislature even, labouring apparently under the general excitement, encouraged promoters by relaxing or withdrawing the general opposition which had previously been offered. In 1844, 797 miles were authorized; in 1845, 1,683 miles; and in 1846, the prodigious total of 4,790 miles, under no less than 275 Acts, obtained Parliamentary sanction. The succeeding years saw some abatement, but still there were 1,663 miles passed in 1847, and 300 in 1848. These figures illustrate the rise and fall of the great fever known as the "railway mania."

The Railways Regulation Act of 1840, the first of the General Acts, provided for a month's notice being given to the Board of Trade before opening; for returns of traffic to be made by the companies, as also of accidents involving personal injury; for Government inspection of works, for the approval of bye-laws, &c. Afterwards were passed Acts for their better regulations, and for the conveyance of troops, 1845, the Railways Further Regulation Act of 1844, the Railways Clauses Consolidation Act, 1845, and the Canal and Railway Carriers Act of the same session.

The Cheap Trains Act, 1883, provides that fares

not exceeding the rate of one penny per mile shall be exempt from duty, but fares for return or periodical tickets shall be exempt from duty only where the ordinary fare for the single journey does not exceed that rate. Duty shall be payable at a reduced rate of 5 per cent. on fares exceeding the rate of one penny a mile between stations within one urban district. Such district shall contain not less than one hundred thousand inhabitants, and must be of a continuous urban as distinguished from a rural or suburban character.

Officers or men in the military or police forces, when travelling on public service, are charged three-fourths or one-half of ordinary passenger rates, according to number travelling. The Act does not extend to Ireland.

Hiring of Special Trains.—The charges per mile for hire of special trains are 12s. 4d. Single and 20s. Return, plus the ordinary fare for each passenger according to class of vehicle hired.

The Workmen's Compensation Act, 1897.—This Act, which received the Royal assent on Aug. 8, 1897, came into operation on July 1, 1898.

Government Control of Railways commenced August 4, 1924, and ceased at midnight on Monday, August 15, 1921.

THE RAILWAYS ACT, 1921.

The Railways Act, which received the Royal Assent on Aug. 19, 1921, contains 86 clauses, and is divided into six parts, to which are added nine schedules. Under the Act railways in Great Britain are formed into groups. Before Jan. 1, 1923, the constituent companies in any group may submit to the Minister of Transport an agreed amalgamation scheme, and the amalgamated companies may submit agreed schemes for the absorption of the subsidiary companies in their groups. Failing agreement, schemes for amalgamation and absorption are to be settled by the amalgamation tribunal set up under the Act. The date tentatively fixed for the completion of grouping is July 1, 1923, the amalgamations of constituent companies preceding the absorption of subsidiary companies. Agreed amalgamation or absorption schemes must be submitted to the stock and debenture holders concerned before being referred to the tribunal. In the event of postponement later than July 1, 1923, in the case of any group, during the period of postponement the undertakings concerned "may, and shall if the amalgamation tribunal so direct, be used, worked, managed, maintained and repaired as one joint undertaking" and the net receipts shall be distributed as agreed or as may be decided by the tribunal. This tribunal will consist of Sir Henry Babington Smith, G.B.E. (President), Sir William Plender, G.B.E., and Mr. G. J. Talbot, K.C., and will be a court of record. The remuneration of the members of the tribunal and their clerks, &c., must not exceed in the aggregate £35,000 and this and any other expenses have to be defrayed by the Amalgamated Companies. The decision of the Court of Appeal or of the Court of Session on a special case stated by the amalgamated tribunal shall be final, except with leave of such Court. Sections 11 and 12 deal with the payment of £60,000,000 in settlement of the "Railways Compensation Account" in two instalments of £30,000,000. Part Two deals with the protection of the public inasmuch that the railway companies may be required by the Railway and Canal Commission, on a proper complaint being

made, to afford reasonable services, facilities and conveniences. The Minister of Transport may require railway companies to conform gradually to measures of general standardisation of ways, plant and equipment, and to adopt schemes for the co-operative working or common user of rolling stock, workshops, manufactories, plant and other facilities. Under Section 18 the Minister has power to confirm agreements between companies for the purchase, lease or working of railways.

Part 3. Section 20 to 26 deals with the constitution and procedure of Rates Tribunal. They establish a court of record styled the Railway Rates Tribunal, consisting of three permanent members, and the staff attached to it must not exceed 10 persons. Permanent members of the tribunal will be appointed by the Crown on the joint recommendation of the Lord Chancellor, the President of the Board of Trade, and the Minister. In November, 1921, the following appointments to Rates Tribunal were made:—Sir Frank Gore-Browne, K.C., President; Mr. W. A. Jepson, late assistant to General Manager of L. & N.W. Ry., as the railway representative; and Mr. G. C. Looket, of Messrs. Gardner, Lockett & Hinton, Ltd., London, as the commercial member. The appointments are for a period of seven years, and the members will be paid whole-time officers. The Minister is entitled to be heard in any proceedings before the tribunal which must make an annual report to him for laying before Parliament. With reference to charges for competitive traffic, Section 52 provides that within a prescribed time the companies shall submit schedules of rates where the distance is 30 per cent. or more in excess of the shorter route, and that these schedules shall be referred to the rates tribunal, which will settle the schedule of equal rates by the alternative routes. In the case of new "circuitous routes" (i.e. routes longer by 30 per cent. or more than the shortest route between the two places) the company must submit the route, and the Minister may refer the matter to the tribunal if the difference is above 30 per cent. If it exceeds 50 per cent. the route must have the consent of the tribunal before the equal rates are applied.

The following are the four railway groups.
1. North Western, Midland and West Scottish Group, and contains the following Railways—
L. & N.W. Furness Maryport & C.
Mid. Highland Cookermouth K. & P.
L. & Y. Caledonian 8. on A. & Mid. J.
North Staffs G. & S.W. Other Companies
2. North Eastern, Eastern and East Scottish Group, and contains the following railways—
N.E. G.N. G.N. of S.
G.C. Hull & B. Other Companies
G.E. N.B.

3. Western Group, and contains the following railways—
G.W. Mid. & S.W. Jct. Other Companies
Cambrian Local S. Wales

4. Southern Group, and contains the following railways—
L. & S.W. L.B. & S.C. S.E. & C. I. of W.

Section 54 orders that each Company shall at each station keep available for public inspection a copy of the general classification of merchandise. These books are to be available during all reasonable hours without fee. Each company must also keep available for 10 years at its head office all documents specifying the rates and conditions in use on Jan. 14, 1920, and a sub-section requires the proportion of any rate appropriated to conveyance by sea to be stated. Part 4 deals with wages and conditions of service, Part 5 with Light Railways, and Part 6 includes sections dealing with facilities and the allocation of receipts of worked railways. Irish Railway Companies are required to furnish accounts and statistics as at present, until other provision is made by the Council of Ireland. Otherwise this Act does not apply to them.

RAILWAYS IN 1920.

The Capital Expenditure at end of year 1920 amounted to £1,128,700,000, made up as follows:—Expended upon the Railway, £1,025,500,000; horses and road vehicles, £1,000,000; steam-boats and marine workshops, £8,000,000; canals, £8,300,000; docks, harbours, and wharves, £52,900,000; hotels, £8,000,000; electric power stations, etc., £6,300,000; land, property, etc., not forming part of the railway

or stations, £42,400,000; other industries, £100,000; subscriptions to Companies other than railway companies, £5,000,000; special items, £1,000,000; expenditure not allocated (mainly railway), £12,100,000; total, £1,128,700,000.

The total Railway and miscellaneous receipts, including Government compensation, were £308,100,000, and the expenditure amounted to £250,800,000, giving a total net income of £57,300,000.

The mileage of lines including all tracks open for traffic was 51,248. The total engine miles run amount to 554,459,500, and the total engine hours in traffic performing this mileage was 69,555,000.

The train miles per train hour, coaching 12.99, freight 7.74; and the train miles per engine hour, coaching 10.10, freight 3.19.

The number of passengers (calculated on single-journey basis) exclusive of season-ticket holders:—First class, 36,918,000; Second class, 5,625,000; Third class, 1,065,805,000. Workmen, 458,485,000. Total ordinary passengers, 1,566,834,000. The average receipt per passenger journey, First class, 4s. 5.6d.; Second class, 2s. 5.9d.; Third class, 1s. 2.9d. Workmen, 2.2d. Season-ticket holders (calculated on annual basis), First class, 171,000; Second class, 101,000; Third class, 743,000; total, 1,015,000; and the average receipt per season-ticket (equated to an annual basis) was, First class, £19 5s. 3d.; Second class, £9 19s. 2d., and Third class, £9 3s.; total, £10 18s. 9d.

The tonnage of general merchandise was 68,658,500; coal, coke and patent fuel, 181,166,000; other minerals, 68,053,000 tons; total tonnage, 317,877,500. The number of live stock was 17,079,000.

The average length of haul of general merchandise was 92.64 miles; coal, coke and patent fuel, 46.98, and other minerals, 51.46; total, 58.06. The average receipt per ton of general merchandise (less expenses of collection and delivery) was 20s. 5.6d.; coal, coke and patent fuel, 3s. 10.6d.; other minerals, 5s. 4.3d.; total, 7s. 9.1d. The average receipt per ton-

mile was:—General merchandise (less expenses of collection and delivery) 2.08d.; coal, coke, and patent fuel, 1.00d.; other minerals, 1.07d.; total, 1.643d. Wagon miles were—loaded, 3,541,582,000; empty, 1,485,001,000; total, 5,026,583,000. The average wagon load (tons) was 5.41. Number of wagons per train—loaded, 24.49; empty, 10.27; total, 34.76. Average train load (tons), 132.49.

The net ton-miles per train engine hour, 865.23; shunting hour, 825.80; engine hour, 422.53. The net ton-miles per route mile was 954.497.

The rolling stock consisted of 24,162 steam, and 86 electric locomotives. There were 6,289 locomotives (steam only) under and awaiting repair, or 26.03 per cent. of stock. There were 51,099 passenger carriages in use, and 5,178 under repair, or 9.96 per cent. of stock. Other coaching vehicles numbered 20,898, and 2,121 under repair, or 10.24 per cent. of stock. The number of wagons were 729,735, and 29,992 under repair, or 3.80 per cent. of stock.

Working Expenses.—Compared with 1913, the expenses stand (in some cases) not far off 200 per cent. higher, with a rise of only 80 per cent. in receipts. The advance is due to higher figures under practically every head of expense, but more particularly in the operating departments, where the effect of enhanced cost of material, increased wages, alteration of working hours, and other conditions of service is most apparent. Taking two items as an illustration—wages (including war bonus) have gone up from £47,000,000 in 1913 to £164,000,000 in 1920, whilst materials have increased from £33,000,000 to £92,000,000. The following comparison of the distribution of £1 gross revenue in 1913 and 1920 is interesting:—

	1913.	1920.
	s. d.	s. d.
Wages.....	7 0	10 4
Materials.....	4 11	5 10
Sundries.....	1 1	0 10
Interest on Capital.....	7 0	3 0

To produce the 1913 net receipts a gross revenue of £320,000,000 is now required.

DAILY RATES OF PAY OF RAILWAY DRIVERS, FIREMEN & CLEANERS (In force from August 18, 1919).

NOTE 1.—COMPENSATION PAYABLE TO RAILWAY COMPANIES.—The sum receivable per annum by the Railway Companies as compensation during the period of Government Control is limited to the Net Receipts of the year 1923 with the addition of 4 per cent. upon Capital Expenditure brought into use since the beginning of that year.

NOTE 2.—ACCRUED.—The figures for the year ended March 31, 1930, are subject to audit, and as regards Government Traffic the rates at which the charges are to be raised are not finally agreed.

NOTE 3.—No sum has been allowed for any liabilities which may attach to the Government in respect of:—(a) Replacement of stock of stores and materials; (b) Abnormal wear and tear; (c) Arrears of maintenance other than permanent way and rolling stock.

NOTE 4.—Arrears of maintenance—permanent way and rolling stock—are estimated at 1923 cost of ascertained arrears plus 75 per cent. for additional cost of labour and material. The actual cost is not yet ascertainable, but payments have only been made on the basis of a 15 per cent. addition.

NOTE 5.—There is a debit amount of £447,680 balance of expenditure over revenue for the year ended March 31, 1930, on Pass Road Vehicles, Steamboats, Canals, Docks, Harbours and Wharves, Hotels, Refreshment Rooms and Cars, etc., thus reducing the net balance to £7,141,070. The Government Guarantee is:—

Standard year proportion of net Receipts

Interest on capital works brought into use

Total Government Guarantee

Less net Balance of Revenue over Expenditure

Net Government Liability for year ended March 31, 1930

STATEMENT OF CAPITAL, REVENUE, WORKING EXPENSES, DIVIDENDS, LARGEST STATIONS, AND ROLLING STOCK OF THE PRINCIPAL RAILWAY COMPANIES OF THE UNITED KINGDOM FOR THE YEAR ENDED 31ST DECEMBER, 1900.

WEEKLY EARNINGS OF RAILWAY SERVANTS (Except Drivers, Firemen & Cleaners, see p. 887).

This shows the Pre-War Wage, the Present Wage, and the Minimum Wage. The Present Wage is guaranteed till Sept. 30th, 1920, after which the Government have offered to adjust it either according to the present scale, depending on the cost of living, or by Court of Arbitration, or by any other method which may be agreed between the Government and the Railwaymen. The Minimum Wage (which takes effect from Sept. 30, 1920) will not be reduced, however much the cost of living falls; the War Bonus continues until the cost of living falls, and can then be altered only by agreement or arbitration.

	Pre-War Wage.	Present Wage.	Minimum Wage.	War Bonus.
Porters	16s. to 22s.	51s. to 55s.	40s. to 49s.	9s. to 6s.
Parcel Porters	22s. to 30s.	53s. to 63s.	45s. to 54s.	8s. to 9s.
Ticket Collectors	21s. to 31s.	54s. to 64s.	45s. to 54s.	9s. to 10s.
Passenger Guards	25s. to 35s.	58s. to 68s.	48s. to 60s.	10s. to 8s.
Goods Guards	25s. to 35s.	58s. to 68s.	48s. to 60s.	10s. to 8s.
Shunters	20s. to 31s.	53s. to 64s.	46s. to 60s.	7s. to 4s.
Goods Porters	20s. to 26s.	53s. to 59s.	40s. to 47s.	13s. to 12s.
Checkers	21s. to 31s.	54s. to 64s.	46s. to 55s.	8s. to 9s.
Carmen	20s. to 29s.	53s. to 62s.	45s. to 52s.	8s. to 10s.
Platelayers	21s. to 24s.	54s. to 57s.	40s. to 50s.	14s. to 7s.

NOTE 1.—The lower rates apply chiefly in the country; the higher rates in industrial areas.

New Wage Scale for Lads on Railway.—Under the provisional agreement (October, 1920) between the Railway Companies and the National Union of Railwaymen, raising from 18 to 20 years the age at which a youth is regarded as an adult, the scale of wages for the future will be:—

Age 15 or under.....	16s.	On reaching age 18.....	30s.
On reaching age 16	20s.	" " 19	30s.
" " 17	25s.	" " 20	adult rate.

Youths in the service prior to this agreement, aged 18 or over, and receiving adult pay, will continue to be paid at the adult rate. The agreement does not apply to clerks, engine cleaners, youths employed in or about railway shops and hotels, and on steamers.

THE RAILWAY CLEARING HOUSE.

This Institution was opened in Jan. 1842, and in addition to the work of clearing through bookings of passenger and luggage traffic, is the medium through which agreements relating to rates and fares, &c., are arrived at. *Chairman*, E. R. Turton, M.P.; *Secretary*, P. H. Price, O.B.E.; *Offices*, Seymour Street, N.W.

IRISH RAILWAY CLEARING HOUSE.

The Irish Railway Clearing House occupies much the same position to the railway system of Ireland as the (London) Clearing House does to the railways of Great Britain. It was established July 1, 1848. *Chairman*, Sir William J. Goulding, Bart.; *Secretary*, Peter J. Brennan; *Offices*, 5 Kildare Street, Dublin.

Indian Railways.

THE construction of Railways in India commenced in 1853, and the total length open on 31st March, 1918-19, was 36,616 miles. The following are the chief officials of the India Office (Railway Department, Whitehall, S.W.):—*Secretary*, Mr. W. Stantiall; *Government Director of Indian Railway Companies*, Mr. G. Deuchars; *Consulting Engineers*, Messrs. Rendel, Palmer & Tritton. The Indian railways have in their service about 627,000 employees, of whom 6,000 are Europeans, 9,000 Anglo-Indians, and 612,000 Indians. The table on opposite page gives some of the main results for the past three years for Indian railways as a whole, i.e., including branch lines promoted by companies, district board lines, Indian State lines, &c., as well as State Railways.

RAILWAY SPEED (Year 1922).

The Fastest Running, without Stoppage, is made by the Companies as under:—

Company.	Train.	From	To	Time.	Distance.	Av. Speed
				H. M.	Miles.	
Great Central	4.13 A.M.	Rugby	Leicester	0 21	19 $\frac{1}{2}$	56.9
Great Western	11. 0 A.M.	Paddington	Bath	1 45 $\frac{1}{2}$	106 $\frac{1}{2}$	61.0
North Eastern	9.22 P.M.	Clifton Junct.	Darlington	0 47	44	55.9

THE GOVERNMENT AND EXPORT TRADE.

Contributed by **SIR PHILIP LLOYD-GREAME, K.B.E., M.C., M.P., Parliamentary Secretary, Department of Overseas Trade—Development and Intelligence—(Joint Department of the Foreign Office and the Board of Trade), 35, Old Queen Street, S.W. 1.**

THERE is, of course, nothing novel in the fact that the Government assists in the progress of British overseas trade. Indeed, so familiar have many of the forms of assistance become that they are apt to be overlooked when the question of Government assistance is under discussion. International commercial treaties, the safeguarding of sanctity of contracts, tariff questions, the maintenance of communications—these, and many others, are forms of assistance and protection which have for long been undertaken by the British Government and by the Governments of other commercial nations, and without which overseas trade would be a hazardous and difficult undertaking.

There are, however, many other directions in which a Government can support and foster the export trade of its country. Up to a few years ago Germany and, to a somewhat lesser extent, the U.S.A. were the two countries of which the respective Governments had gone furthest in their endeavours to extend their organisation for rendering commercial assistance, and British traders were not slow to point to these examples, and to draw comparisons between the activities of these Governments and their own.

A very satisfactory change has, however, taken place during the past few years, and from being laggards in the race, the British Government has moved up into the front rank. So pronounced, indeed, has been the progress made in building up an organisation for fostering and assisting in the development of British overseas trade, that the Governments of other countries have recently been closely and openly studying our organisation with a view to developing their own upon similar lines.

Undoubtedly the War, and the trading difficulties which it brought in its train, were largely responsible for bringing about a realisation that greater assistance to exporters was an urgent necessity, and, starting with the Commercial Intelligence Branch of the Board of Trade as a nucleus, a far-reaching commercial intelligence system has been built up, having as its headquarters the Department of Overseas Trade (Development and Intelligence), Old Queen Street, Westminster.

The work of this organisation divides itself under the following main heads, viz., securing commercial information from all parts of the world; disseminating this information to British manufacturers and exporters; undertaking such special constructive activities as may be found possible; and assisting traders in the removal of difficulties which, from time to time, arise.

To carry out the first of these functions a wide-spread and efficient overseas intelligence system is necessary. This has been attained by means of the Trade Commissioner Service in countries of the Empire and the Commercial Diplomatic and Consular Services in foreign countries. The first two Services are entirely concerned with commercial matters. Consular officers have many and varied functions, but under the aegis of the Department of Overseas Trade, which now directs their activities, a much greater amount of time is devoted to commercial matters than was formerly the case.

These services form a network of commercial intelligence officers covering every important market in the world. From them the Department is in constant receipt of a steady flow of valuable trade information which it brings to the attention of such portions of the British commercial community as are likely to be interested.

It is, perhaps, unnecessary to go into details as to the methods by which this is done, but a brief outline may be of interest. The Headquarters staff comprises a number of officers who have had actual business experience either in the countries, or of the trades, with which they are now dealing. By co-operation between these officers, viewing the information, the one in the light of his overseas experience, and the other his experience in the trade in this country, the value of the information to British traders is assessed, and the best method for dissemination decided.

The information may then be issued in a number of ways, the chief media being circular letters, which are issued to all British firms likely to be interested, the trade press, the "Board of Trade Journal," Chambers of Commerce Journals, etc.

The following few examples will give some idea of the nature of the information daily being received: notifications of foreign or colonial contracts open, or likely to be open, for tender, and other openings for British trade; existing and probable future demand for specific lines of British goods; the extent and nature of competition and the best methods for meeting it; usual methods of business, terms of credits, payment, etc.; Customs regulations and tariffs; regulations covering commercial travellers, certificates of origin, etc.; sources of supply and prices of trade products, etc.

In addition to supplying such information, the Department is in a position to supply information on all commercial questions in response to direct enquiries. The Department has frequently been able to solve difficulties which may have arisen in connection with contracts, and to enable traders to effect satisfactory settlements.

Further, at the request of British firms or Associations the Department undertakes special enquiries entailing extra financial outlay, with no charge other than the refunding by the firm or association of the additional expense incurred.

The Department further assists trade by placing British exporters in touch with firms or individuals in overseas markets who are considered suitable to act as agents or representatives, and advising the British firm as to the agency conditions usual in the country in question, or, in the case of an exporter desiring to introduce his goods into a given market, by supplying names of likely importers.

The difficulties caused by abnormal rates of exchange, and the financial situation in a number of European countries, led to the formulation of the Export Credits Scheme, which is administered by the Department of Overseas Trade. The original scheme has recently been improved and its scope considerably extended so as to include many of the Empire markets. Traders are having growing recourse to the advantages offered by this scheme.

For a trader successfully to compete in an overseas market it is a necessity that he should have actual knowledge of the kind of goods with which his own must compete. To meet this requirement, the Department has formed an extensive collection of samples of foreign competitive goods and commercial products. These samples are exhibited to, and inspected by, British manufacturers, who thus gain a first-hand and valuable insight into the nature of the competition which they must expect to meet.

The Department is kept closely in touch with the requirements of the commercial community, and its activities are directed upon those lines considered by business men to be most useful, by its Advisory Committee of business men. All the members of this Committee are men with very wide experience, ranging over almost all our industries and the countries with which we trade, and are thus well qualified to assist the Department in its endeavours to meet the needs of British traders.

The Department further works in close co-operation with Chambers of Commerce, Trade Associations and other representative bodies. There is thus obtained not only a common effort to avoid overlapping and duplication of work, but also a further guidance towards the most effective and useful activities.

A form of co-operation which has borne many good results is the visiting of industrial centres in this country by Trade Commissioners or Commercial Diplomatic Officers home on leave, or special duty. In the main, Chambers of Commerce or Trade Associations are visited, and members of these are thus enabled to obtain at first hand valuable information concerning conditions in various overseas markets, while at the same time the officer himself refreshes his knowledge concerning home conditions and is so much the better able efficiently to perform his duties on his return. Not only are representative bodies visited, but also individual firms who are particularly interested.

The outcome of this co-operation has been measured already in the success which has attended investigations undertaken by the Department, either on its own initiative or at the request of some such body as the above, in which the Department and the Association have worked in conjunction.

A number of other similar functions are performed by the Department, but the above will serve to indicate the nature and extent of the assistance which it extends to British manufacturers and merchants.

For Rep-rence

MARINE INSURANCE.

HISTORY OF LLOYD'S.

TOWARDS the latter part of the Seventeenth Century, the Commercial Community interested in Shipping collected together at a small Coffee-House kept by a man of the name of Edward Lloyd, first of all in Tower Street and, after 1691, at the corner of Abchurch Lane and Lombard Street, in the City of London. The name of this Coffee-House keeper has come down from generation to generation in connection with the greatest Shipping and Marine Insurance Institution of the World.

In 1726 "Lloyd's List" was founded. This paper is still printed and published as a daily Shipping and Commercial Newspaper at Lloyd's, Royal Exchange, and is the oldest newspaper in the world, excepting the "London Gazette."

In the year 1770 the frequenters of Lloyd's Coffee-House formed themselves into an alliance, and moved to Pope's Head Alley, and in 1774 they removed to the Royal Exchange, where the Corporation of Lloyd's is still established.

Lloyd's established Signal Stations at many important points on the Coasts of the United Kingdom and Abroad, and there is a Lloyd's Agent, or Sub-Agent, at every Port in the World. These Agents now approach 2,000 in number. At many of the Lloyd's Agencies abroad arrangements have been made for the payment of claims.

Insurances of all kinds (except Life) can be effected at Lloyd's. To effect an Insurance at Lloyd's, it is necessary to employ the services of an Insurance Broker, who must be either a Member of, or a Subscriber to Lloyd's, but any letter addressed to the Secretary of Lloyd's, Royal Exchange, London, E.C. 3, will be passed on to a Lloyd's Insurance Broker for attention.

SECURITY OF A LLOYD'S POLICY.

THE high reputation enjoyed by Lloyd's policies is in a large measure due to the precautions taken by Underwriters, through their governing body, to protect and maintain the security upon the credit of which these policies are issued.

It may be of interest to state some of the requirements with which Underwriting Members must now comply.

Every Underwriter must satisfy the Committee of Lloyd's as to his status and financial position before he can be elected a Member.

He must deposit with the Committee as security for his Underwriting liabilities exclusively, a sum which they deem to be adequate for the amount of business which he underwrites. A minimum of £5,000 is required, and the amount of liability he may incur is restricted. These deposits now amount to £7,000,000.

It should be observed that in addition to this, each Member is responsible to the full extent of his personal resources for his Underwriting liabilities.

All premiums received are held in trust for the purposes of Underwriting business only. The premium income of Lloyd's Underwriters for 1920 amounted to over £30,000,000.

As a further safeguard the Non-Marine liabilities of all Underwriters are guaranteed by a scheme which has received the approval of the British Government.

The accounts of every Underwriter at Lloyd's are annually audited by independent Auditors approved by the Committee, when adequate security must be shown to meet outstanding liabilities, according to requirements approved by the British Government.

BRITISH SHIPOWNING.

By J. T. FINDLAY, Editor of "The Shipping World."

ONLY a few years ago, when war imposed a strain on men's nerves that sometimes obscured their judgement and impelled them to seek a scapegoat for besetting ills, there was a popular outcry against the shipowner as profiteer. We hear nothing of that to-day, for the very good reason that everyone knows how extremely unprofitable shipping business has since become, and how meagre is the return on the capital invested in it. This sudden change of fortune affords a striking illustration of the see-saw nature of the industry, and even if we admit that shipping did well in the War from a profit-earning standpoint, what it gained then it has assuredly lost now. To the speculator, the ship share market, with its recurrent fluctuations, has always proved attractive; but the ordinary investor, who locks up his money, not so much with a view to capital appreciation as in the expectation of receiving regular dividends from it, would do well to study the average returns from shipping shares over a period of at least ten years before investing his savings. The dividends, taken in the aggregate, are not exceptional; they may not even be adequate. The capital, too, may melt away. In October last shipping shares of £1 each, which little more than a year ago stood at a premium of nearly 150 per cent., were on offer in the Cardiff Stock Exchange for less than a shilling per share. The principal assets of most shipping companies, their tonnage, have depreciated enormously in value during the past twelve months. Only the firms of long standing and substantial reserves, that have pursued a consistent policy of writing down their ships, can maintain themselves during this time of depression.

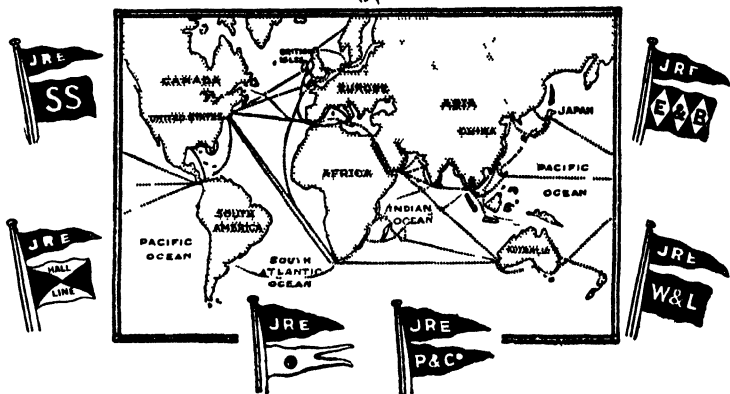

The truth is shipping has been passing through a particularly lean period, and 1921 must take its place in history as one of the worst known in the annals of the industry. The causes of this slump in activity should not be attributed to anything wrong in the business itself, for it is a perfectly sound one. But its prosperity depends upon the prosperity of other trades. It is just because the depression has been so general and deep that shipowners are experiencing hard times. There are not too many ships, but too few cargoes. Freight has shrunk to unprofitable levels, and practically every voyage of the past few months has been run at a loss which is only less serious than the expense of laying the vessel up altogether. There is no substantial surplus of the world's wealth to be sent abroad in exchange for other goods. In our own case, British coal ex-

ports were severely restricted during the year, and for three months of it were practically unattainable. A year ago we were still feeling the effects of Government control on coal exports and other essential commodities. Then came the disastrous national strike of the miners, which completely arrested all shipments of our staple commodity, and has since disorganised the export market very seriously. True, American coal imports, once formidable, no longer influence the British market, but the three months' stoppage made it difficult for our coal exporters to recapture the foreign markets. Obviously, if outward cargo is insufficient the cost of inward shipments will be higher, and the price of goods to the consumer consequently greater.

There are, of course, other considerations to be taken into account besides those of unremunerative freights and the scarcity of cargo on offer. For the major part of the year high bunker prices ruled. Labour was not only difficult to pay but gave less than an adequate return in work for the wages it claimed and received. On account of the restricted hours of work ships were longer in the "turn round" in port. In recent years it has been taking five ships to do the work that four performed in 1913, and even with the slower rate of despatch there are hundreds of thousands of tons of ships tied up in our ports to-day unemployed. Exchange fluctuations have made forward business almost impossible. Add to these disabilities the crippling effect on industry of heavy taxation by the Imperial Government and bureaucratic interference with freedom of seaborne trade, as exemplified by the Safeguarding of Industries Act, and we have explanation enough of the tiers of idle ships one saw in the Clyde, the Tyne, and other industrial rivers throughout the year. It is little wonder that the laying down of new ships is almost at a standstill, and that British and foreign shipowners should prefer to cut their losses by cancelling orders for vessels already on the stocks, and paying heavy fines rather than accept delivery of boats which might cost, say, £30 per ton, and yet be worth only £10 per ton, or less, when ready to go into commission. New liners are being built that can carry cargo as well as passengers. They are necessary to replenish the fleets of their owners. But the purely cargo boat is at a discount, and is likely to remain so until a larger volume of trade assures her regular cargoes at profitable rates of freight. British shipping, however, is certain sooner or later to come to its own again.

ELLERMAN LINES LIMITED

Controlled by Sir John R. Ellerman, Bart.

THE carrying capacity of the Steamers owned and controlled by Sir John Ellerman Bart., throughout the world, is now over 1,350,000 tons deadweight, and additional steamers, with an approximate capacity of 300,000 tons, are in course of construction. Powerful and Luxurious Passenger Steamers to suit the various trades are a special feature.

The following are the principal Lines (known collectively as the Ellerman Lines Ltd) and their trade routes —

BRITISH SHIP-REPAIRING.

By JOSEPH L. CAROZZI, Editor of "Syren and Shipping."

AS was only to be expected, the ship-repairing industry of the United Kingdom has suffered with all phases of shipping enterprise from the trade depression of 1921. During the year a large amount of tonnage has been withdrawn from active service, with the natural result that marine risks have been materially reduced, and this factor alone has been responsible for there being fewer jobs of the ordinary repair character offering. Fortunately, however, this adverse influence has been compensated for, to some extent, by the amount of reconditioning work, much of which has been upon ex-German vessels which have had to be adapted to the special requirements of their new owners. Another phase of the work which has assisted to find employment for ship-repairers has been the conversion of steamers for burning oil in their furnaces instead of coal. Had it not been for this the ship-repairing industry would have felt the depression of the times much more severely. It is greatly to be regretted that the year has been marked by serious labour troubles. The joiners' strike was perhaps as seriously felt by ship-repairers as by shipbuilders, because many overhauls include a very considerable amount of woodwork. The trouble, too, which arose on the Mersey in connection with the use of the oxy-acetylene burner was evidential of the utterly unreasonable attitude of many workers in ship-repairing establishments, and has militated against the success of the industry. The principle involved was that of the displacement of men by a labour-saving device; the workers maintaining that they were entitled to be idle, under pay, while the burner cut out the old material—an operation which had formerly been performed by manual labour. Happily the struggle was not fought to its bitter end, the men finding their employers firm in resisting their demands, and owners sending their vessels to foreign establishments. With regard to the facilities offered by the latter, British workmen have had a very severe lesson, because the repeated experiences of shipowners who sent their vessels to Antwerp, Rotterdam, or Hamburg was, not only that the work could be done more cheaply, but also that the contractors could give, and keep, a specific undertaking as to the date for its completion. In spite of this it is a very gratifying sign of the times that British shipowners have, except in cases where a ship was urgently needed, refrained from sending work abroad. If British labour would loyally co-operate with the employers there is no reason why the ship-repairing industry should not become one of the most important of those affiliated with shipping. The United Kingdom has unique facilities for the dry-docking and repairing of

ships. The plants, to deal both with hulls and engines, are highly specialised, and are not equalled elsewhere, and they possess every facility for the expeditious turning out of repair work of every description. This should, when conditions revert to the normal, enable our ship-repairers to deal not only with British work, but also to cater for the requirements of the major portion of the foreign tonnage which frequents our ports. We have mentioned the question of dry-dock facilities which are an absolute necessity to the industry. Many firms possess their own private dry docks, but the provision of graving docks for the very largest class of vessel, such as the 56,000-ton *Majestic*, the *Berengaria*, *Olympic*, *Aquitania*, and *Mauretania* and others, presents a somewhat more serious problem. It can be said that we possess in this country only two ports where the largest sized craft can be dry-docked. We refer to Liverpool and Southampton, and the question of increasing the facilities there offered is at present under consideration. During the year the development of ship-repairing on the Thames has received a very considerable impetus. A large new graving dock has been provided in connection with the Royal Albert Dock system; and of equal importance is the advent of the great firm of Messrs. Harland & Wolff upon the Thames. They have undertaken to execute all the repair jobs required by the Port of London Authority, and this will form the nucleus of operations similar to those which the firm already engage upon, at Liverpool and Southampton. These are mainly in the way of repairs to the Transatlantic liners, and the owners of London liner tonnage will welcome the new arrangement. Many of the bigger vessels using the docks of the Thames have been built at one or other of the yards controlled by Messrs. Harland & Wolff, and the advent of the latter in the Port of London is therefore from the point of view of the owners of these ships, an event of no little importance, for, needless to say, there are distinct advantages in having a vessel repaired by the firm which originally constructed her. Altogether there are many indications that the ship-repairing industry is on the threshold of better times. Plants have been brought thoroughly up-to-date and reinforced with the latest labour-saving machinery. Happily there are signs, too, of a more loyal spirit of co-operation of the part of the men, as is evidenced by their acceptance of lower wage rates. If they will but realise that in ship-repairing, which is a highly-competitive industry, time is a very material factor, then there is no reason why the ship-repairers of the country should not look forward in the near future to prosperous times.

IT is surprising that the industrial potentialities of asbestos, the mineral fibrous substance whose name is derived from its distinguishing properties, were neglected and apparently unperceived till about fifty years ago, although the substance itself was known and put to certain uses in ancient times. Not to go farther back, it is referred to by Pliny, who wrongly places it in the vegetable kingdom—a mistake not difficult to understand, for the fibres of crude asbestos—fine, silky hairs—become on slight pressure a soft, woolly stuff almost exactly like unspun cotton. Asbestos was occasionally woven into handkerchiefs, and, there is some reason for asserting, into shrouds, which were used at Eastern cremations to prevent the ashes of the corpse from mingling with the ashes of the funeral pyre. Charlemagne is said to have possessed an asbestos table-cloth which, when soiled, was cleaned by being thrown into the fire. In 1676 a trader from China exhibited to the members of the Royal Society a smaller fabric made of what was described as “salamander’s wool”—*linum asbesti*. When the Eskimos of Labrador first came under observation it was found that they used the material for lamp-wicks, and it served a similar use in some of the sacred lamps of olden temples.

The raw material is widely distributed, but only in a few areas are the deposits sufficient in extent, and pure enough in character, to be worked on a commercial basis. There are, for example, limited quantities of it in Tyrol, Hungary, Queensland, New South Wales, and New Zealand; it is not unknown in the British Isles, being found among old rocks in North Wales and in parts of Ireland. It also occurs in several parts of the United States. Mountains in Griqualand West, Cape Colony, yield a blue fibrous mineral worked under the name of Cape asbestos. Supplies were formerly obtained almost exclusively from Italy and Corsica, and the output from Italian workings—mostly an amphibole—is still considerable; but of recent years our most important supplies have been drawn from Canada, where, in the province of Quebec, a belt of a fibrous variety of serpentine was first appreciated as a commercial asset about 1877. In different varieties of asbestos there are many dissimilarities in the character of the fibres, those of the serpentine order never exceeding two or three inches in length, but being of great tensile capacity. The bulk of asbestos on the market to-day is of this serpentine description. Large working deposits exist in West Siberia, and during the last five years Rhodesia has produced large quantities of good white fibre.

The economic value of the material is not confined to its incombustibility, but extends to its low thermal conductivity and its powers of resistance to the attacks of acid—qualities which multiply its uses, among the first of which were

the jacketing of boilers and steam pipes, the packing of joints, glands and stopcocks, and the filtering of corrosive fluids. It has come into employment as an electric insulator, and even clothing for firemen has been made from it. By itself or in combination, in a number of miscellaneous forms as well as those of yarn, felt and millboard, it is without any possible substitute of equal efficiency and serves many purposes for which nothing else is available. As a boiler covering it has been demonstrated that for every thousand square feet of surface fully protected by an asbestos composition a saving is ensured of about two hundred tons of coal yearly.

On the short history of the asbestos trade in Great Britain the passing of Mr. Lloyd George’s Patents Act in 1907 has a direct and important bearing, for it was the first to benefit under that Act. The Austrian patentee of a process for the manufacture of asbestos cement tiles and sheets had obtained the protection of patent rights in this country, but refrained from manufacturing here the articles which that protection prevented us from making ourselves—aluding, to the advantage of foreigners, the rights he had acquired from us, and turning their possession into a means for the continuance of a Continental monopoly. The revocation of his British patents cleared the way for the home production of the commodities they had covered, with the immediate result of the establishment of a new British industry. A material composed of London Portland Cement reinforced with pure asbestos fibre of selected grades, from which are made tiles and sheets for constructional purposes, was soon on the market, and both of its converted forms have proved themselves superior to any competitive products of Germany and other countries. The range of their employment is an extensive and widening one and they promise to be to the builder what asbestos in other adaptations has for half a century been to the engineer. The combination of which they consist, applied as a facing to slabs of cement-concrete, completes the suitability of the latter for the erection of a whole house or other structure, in place of bricks and mortar, over which they claim distinct and permanent advantages. In the indicated direction the time is opportune for expected developments.

In similar connection is to be mentioned another fire-proof and damp-proof composition which owes its distinctive utilitarian, as apart from its ornamental and artistic, characteristics to the presence of a large percentage of asbestos. The reference is to a new flooring material, for use in residences, halls, schools, theatres, factories, hospitals, and other public buildings; in railway carriages and on shipboard for saloons and cabins.

The progress of the industry under review has been a rapid one, but, serving as it does so many interests, its success is on a stable and durable foundation.

Asbestos & The Empire

*How a geological curiosity
became a building and
engineering asset.*

Until 50 years ago, the fibrous variety of hornblende known as "Mineral Wool" or Asbestos, had no commercial use except in gas stoves. The company with which Mr. John Bell was originally associated, and its successors up to the present day, have made Asbestos an Imperial asset. Mr. John Bell was one of the first to show that Asbestos could be spun, like a textile. On this discovery and the other developments which followed, was built the great Asbestos Industry.

THE BOILER INDUSTRY.

SINCE the early days of steam (which Emerson said might almost be termed an Englishman) Great Britain has annually exported a considerable number of boilers, in itself a proof that her practice and prices have been satisfactory. This is a state of affairs which must be maintained, and a short survey of the present organisation, conditions and practice of the industry may be useful in assessing future prospects.

The boiler industry is carried on, broadly speaking, through two systems of organisation. The first is that in which boilers are not the sole product of the manufacturing firm, but are made as an item in a complete unit; thus nearly all the large shipbuilding yards have boiler shops of their own, railway companies generally produce the boilers for their locomotives, as also do makers of agricultural engines, road-rollers, and the like. This system shows signs of being displaced by the second one in which a firm manufactures boilers and nothing else—in other words, by the modern system of specialisation. A tendency of this kind is all to the good. Modern boiler-makers use a much larger proportion of heavy plant than their predecessors, such as hydraulic flanging presses, multiple drills, hydraulic riveters, and it is only a firm able to keep such machines busy by a large turnover that can produce good boilers at a reasonable price. The use of powerful and efficient plant naturally results in a better article with lower manufacturing costs than older methods could, as these involve so much hand work. This is true of most trades, but applies with special force in boiler-making, where, for instance, the use of a flanging press avoids the frequent reheating of heavy plates, which is necessary with hand flanging. But this specialisation goes further. Boiler-makers nowadays do not make *all* types of boiler; as a matter of fact, most of the firms of the front rank confine themselves to the manufacture of one, or at most two types. Thus the makers of water-tube boilers (in which the fire is *outside* the water and needs a firebrick-lined casing to contain it and form the furnace) are almost a race apart from the makers of fire-tube boilers (in which the fire is contained *inside* the water-holding structure). The latter class, again, handle only, say, "Scotch" or "Lancashire," "Yorkshire," "Cornish" or "Locomotive" boilers, which are all horizontal, or else one of the vertical types. These last, apart from the common "Crosstube" boiler, are general purpose patented patterns, and further illustrate specialisation. The natural result of specialisation is standardisation, which again helps to make possible a better article at a moderate price. Most of the firms which have adopted the one have adopted the other, greatly to the benefit of the buyer, as he can select a firm whose range of standard sizes, singly or in groups, covers his requirements with, very often, a possibility of getting what he wants from stock, though the whole trade has suffered badly for the last year or so from the extreme shortage of raw material, viz. plates and tubes, which makes for longer deliveries. It may be noted here that specialisation does not mean monopoly; there is sufficient competition amongst boiler-makers to keep the trade healthy, whilst there is generally a refreshing absence of "rings" or combinations.

The best modern practice, it may be noted for the benefit of the non-technical buyer, requires all the rivet holes to be drilled in place, not

punched; all plate edges to be planed or sawn to shape, not sheared; riveting to be done by hydraulic machine wherever possible, and caulking with pneumatic tool. In design development is taking place in the direction of reduction of stays (or gussets), which often make a too rigid structure and interfere with proper cleaning, their absence being compensated for by pressing the plates affected into stronger forms. Steel is now almost invariably used, except sometimes for tubes, and the employment of steel of very high tensile strength is becoming more frequent where weight is a prime consideration, e.g. in Naval work. Welding by the oxy-acetylene flame or by electricity in place of riveting seams is making headway. There is also a tendency to build boilers for higher pressures than formerly.

More scientific design has resulted in economy of material, and standardisation in economy of time and labour. Economy in performance is now being carefully studied. The present high cost of steam coal involves the use of inferior fuels, which to be consumed effectively require special forms of grate. These are being developed, and material formerly classed as waste can quite easily be burned on them. The superheater is being further developed also in the direction of economy. Though the use of heavy oil as fuel is not at present a commercial proposition in Great Britain, owing to its high cost, it has great advantages, and many boiler-makers have studied the subject sufficiently well to be able to modify their designs so as to burn it effectively.

A welcome note in progress was sounded in the autumn of 1919 by the publication of a uniform set of rules for boiler construction. This is the production of the big Marine Surveys, viz. Board of Trade, Lloyd's, British Corporation and Bureau Veritas. It will further simplify and standardise business, and possibly lead to regulations for land boilers, for nothing of the kind exists in Great Britain. The intending buyer of a land boiler, then, is well advised to enquire to what rules his boiler will be constructed.

The future of the industry is not so gloomy as some prophets predict. It is quite true that the Diesel engine is apparently driving steam boilers out of large ships—the main boilers, that is—for even on Diesel-engined vessels it is found necessary to carry an auxiliary (or donkey) boiler to provide the motive power for such machinery as winches and steering-gear and heat for various purposes. It is further possible that the use of the large internal-combustion engine may become more general on land in such places as the power house, and that water power and tidal action may be more utilised; but there is scarcely an industry which does not make use of steam for other purposes than power, and new processes and extensions are occurring from day to day. The utilisation of waste heat from steel-heating furnaces by means of boilers is an illustration. The steam boiler and engine still remain the best independent source of power, and it is this very independence which makes a steam installation the most reliable and flexible power producer in isolated situations and developing countries.

There will be numbers of oil-fired steam boilers in Mesopotamia and South America in the future, wood-fired in Siberia and Canada, to suggest only a few possibilities, and, as British boilers are undoubtedly the best, the larger portion of them will be British.

OIL MILL MACHINERY.

(THE EXTRACTION OF OILS FROM OLEAGINOUS SEEDS.)

By R. A. BELLWOOD, M.I.Mech.E.

VEGETABLE oils have always been of enormous value to the human race, used as foods and for medicinal, lighting, lubricating, and a great number of other purposes. The origin of the oil-milling industry would be difficult indeed to place, but it is known that the Egyptians used a crude form of press for the extraction of oils 5,000 years ago. The knowledge possessed by the Egyptians appears to have been passed on to the Jews, and later to the Romans and Greeks. In the 17th century the Dutch introduced a new form of press, the oil being forced from the seeds by means of wedges and falling stampers. Bramah's invention of the hydraulic press, in 1795, was adapted some time later to the pressing of oleaginous seeds, and superseded the stamper presses. The first hydraulic presses made were of the box type, each press only making four cakes at one pressing. These were superseded in 1874 by what is known to-day as the Anglo-American Press.

Until recent years, nearly all vegetable oils were expressed, that is, the seed after suitable preparation was submitted to pressure and the oil forced out. To-day, an alternative method in the extraction of oils by means of chemical solvents is firmly established and in general use.

Concerning plant for expressing oils from seeds there are different types of presses in use. That which has been most favoured in this country is the Anglo-American system, probably on account of the fact that previous to the War the seeds chiefly treated here were cotton-seed, linseed, and soya beans, which lend themselves more readily to treatment by this system. A standard unit of Anglo-American machinery usually comprises the following:—

A magnetic separator to remove any iron from the seed.

A screen to take out the dirt and foreign matter.

A set of rollers to grind the seed.

A cooking kettle to heat and temper the seed.

A moulding machine, which takes the heated meal from the kettle and moulds it to cake shape for the press.

Four hydraulic open plate presses, each capable of taking sixteen charges of meal from the moulding machine; these are enclosed in presscloth, which retains the solid material and allows the oil to escape.

A paring machine, which removes the oily edges from the cakes as taken from the presses.

A set of edge-runner stones, to grind the parings from the paring machine; these parings being returned to the kettle and mixed with the new seed from the rolls.

A set of hydraulic pumps, with the necessary valves for operating the presses.

In addition, elevators and conveyors are supplied for taking the seed from one part of the plant to another, so that the whole works almost automatically. The cakes from the presses are chiefly used as cattle food.

Another type of press is the "cage" or "perforated box" press, of which there are at least

two distinct types. In what is known as the "trainway system" the extracting boxes of the presses are removable—whereas in the other, the extracting boxes are fixed. These extracting boxes are usually built up of a number of thin staves, each staff having one serrated edge, thus forming a box, with innumerable fine perforations through which the oil escapes under pressure. In the trainway system, the boxes are filled with seed, which is then compressed in a preliminary packing press; more seed is placed in the box, and it is again compressed. The boxes are then taken on a truck to a finishing press, where the oil is expressed. After the seed has been under pressure in the finishing press a given time, the box is taken away to the preliminary press, where the cakes are ejected and the box refilled. Preparatory cleaning, grinding and cooking plant is of course required with these presses, this being substantially the same as for the Anglo-American system. Stationary cage presses are now being made combined with preliminary packing presses, and automatic feeding arrangements.

"Cage" presses are usually employed in working up seeds having a high percentage of oil, such as palm kernels, copra, ground nuts, castor seed, shea, mowrah, etc. If high-class edible or medicinal oils are required, the "cage" presses are generally employed, but the material is treated cold in the presses, no heat being applied to the seed, and this results in a better quality of oil being produced, known as cold-drawn oil. After cold pressing, there is still a considerable percentage of oil remaining in the seed, so that the cakes are ground up again, and may be pressed again hot, or better still, treated by the solvent extraction process, by which practically all the oil remaining can be extracted.

The solvent extraction process is suitable for treating practically all kinds of seeds, with either a high or low oil content. This process is distinctly useful when the maximum extraction of oil is required, or when the residue is not required in the form of cakes for cattle feeding purposes. These plants are extremely useful for recovering the balance of the oil from materials which have been once pressed, such as castor seed, which has been pressed cold to obtain pharmaceutical oils. The products of the solvent extraction process are oil and meal, the latter being sold as a cattle food, or as a fertiliser, according to the seed being treated. At one time there was a strong prejudice against extracted oils and meals, but that is rapidly dying out. Oil refining processes have been greatly improved, and the oil from solvent extraction plants can readily be used for edible purposes. The solvent used chiefly in this process is benzine. Other solvents, may, however, be used, such as trichlorethylene, etc. There are a number of solvent extraction plants already at work in the United Kingdom, of varying capacities dealing with 200 to 2,000 tons of seed per week. As oil manufacturers realise the great possibilities of the solvent process many more plants will be erected.

"PREMIER" PRESS

(No. 329)

an improved type of "cage"
press for treating

**COPRA, CASTOR SEED,
GROUND NUTS
and similar Seeds.**

□

The press is of massive construction, weighing, with the kettle, approximately 35 tons; the working pressure is 3 tons per square inch, equal to more than 800 tons gross pressure on the seed. The extracting box is 9 feet long by 19 inches diameter.

The press is fitted with top preliminary compressor and automatic strickling gear.

THE IRON AND STEEL WIRE INDUSTRY

By H. D. LLOYD, Assoc.M.Inst.C.E.

IN the article dealing with this Industry, published a year ago, figures were given showing in detail the Exports of Wire and certain Wire Products for the half-years ended December, 1919, and June, 1920

The subsequent rise and fall of this trade is best shown by comparing the latter figures with those for the half-years ended December, 1920, and June, 1921.

The half-year ended December, 1920, shows the zenith of the unprecedented boom in post-War trade; whilst the subsequent six months show clearly the severity and suddenness of the slump which followed

It would be difficult to find an industry which has suffered more severely from the collapse in trade than the Iron and Steel Industry.

As much, possibly, through the fault of customers as of manufacturers, a policy of price-inflation was pursued to such lengths that, as might have been expected, the collapse, when it came, was the more complete.

Whilst the Iron and Steel Wire Manufacturers cannot be charged with having acted on any unwise policy, it was inevitable that the trade should suffer along with others when re-action ensued.

The extent of the reaction is shown in the figures for

exports during six months ended June, 1921, totalling only 37½% of the figures for the previous six months

While no official figures for the Home Trade are available, it is estimated that the various Works have not been operating at more than 30% to 40% of their capacity during the first six months of 1921.

In that period not only did foreign trade cease to flow, but renewed activity also by Continental manufacturers, invading our home markets, resulted in imports of Wire Rops and Wire Products totalling over 41,000 tons.

The continued depression in the value of the franc, lira, and mark, make it impossible for British manufacturers to sell in continental markets, and correspondingly easy for continental manufacturers to invade our home markets at prices below British costs of production.

There are not wanting signs that the pendulum has reached the end of its swing, and that a reversal of direction, in fact a counter re-action in trade, is beginning.

Any revival of trade must necessarily be slow, hampered as manufacturers are by burdens of taxation impossible to sustain, by cost of wages, fuel, transport, and all other charges depending mainly on wage costs, still high in comparison with competing countries.

TUBE MANUFACTURES.

WROUGHT-IRON AND MILD STEEL TUBES OR PIPES.

By H. J. RHODES.

ALTHOUGH the manufacture of tubes from wrought iron and steel is a comparatively new industry, there must be many users of tubes, or pipes as they are just as often called, to whom the industry and the process of manufacture are more or less unknown. It seems very probable that the first tubes manufactured from wrought iron were intended for the barrels of guns, and used only for that purpose. One of the first instances of their application to one of those purposes for which they are now so largely used is reported in 1816, when William Murdoch, the pioneer of gas lighting, employed old gun barrels screwed together to convey gas in his works near Birmingham. The end of the war in Europe in that year had probably very greatly reduced the demand for gun barrels and thrown large quantities on the market. In many parts of the country to-day gas pipes are still spoken of as gun barrel. The need of wrought iron pipes grew rapidly, and a quicker and less costly method of manufacture from that of gun-barrel making had to be sought for, and this was discovered in 1825 by Cornelius Whitehouse, of Wednesbury, when he invented the process of butt-welding by a draw-bench and dies.

The principles of his invention have been in use ever since for the manufacture of tubes by the butt-welding process, but, naturally, the methods of application have been greatly altered and improved.

The production of tubes by the Whitehouse invention did not for long fulfil all the requirements of the new conditions which were arising, and for which larger and stronger tubes became necessary than could be produced by the butt-welding process. The minds of many ingenious men were at work, and it was only after long and costly experimenting that, somewhere about the year 1842, the process known as lap-welding was established.

The methods of welding tubes known as butt-welding and lap-welding were, until comparatively recently, the only processes employed for the manufacture of wrought iron and steel tubes, and probably more than three-fourths of the world's requirements are still manufactured by these two original methods.

The butt-welding process is usually the process by which tubes from $\frac{1}{4}$ -inch to 2-inch bore are manufactured for gas, water, steam, and like purposes where the pressures are normal.

The strips or hoops are delivered to the tube mill from the iron and steel works of a length, width and thickness suitable for the size of the tube to be made. The flat strips and hoops are brought to a welding heat in a furnace, gripped by tongs, and drawn from the furnace through a bell-shaped die. The die is shaped so as to gradually bring the hoop into the shape of a tube, the edges being forced squarely together and welded. The tube after being welded passes immediately from the draw-bench through sizing and straightening rolls to give the correct outside diameter and finish to the tubes.

The lap-welding process can be applied to all sizes of tube from $\frac{1}{4}$ inch up to as large as 6 feet.

The strips or plates are first of all planed or scarfed on the edges. The scarfed strips are then heated to a bright red heat in a "turning-up" or "bending furnace," from which they are drawn through a die so designed as to bend the plate into a tubular shape with the edges over-lapping. The plate, when so shaped, is termed a skelp. The skelp passes into another furnace where it is raised to a welding heat, and is then pushed out at the front of the furnace into the welding rolls, which are set one above the other, each having a semi-circular groove of a

diameter equal to the external diameter of the tube. Between these rolls a mandril is held in position on a long bar, over which the revolving rolls rapidly carry the tube. Thus the weld is made by the pressure exerted on the lapped edges while passing between the roll surfaces and the mandril.

The method described of lap-welding through rolls is generally employed for sizes up to about 12-inch diameter, and diameters larger than 12 inch are usually welded by a different process. The plates are formed into tubular shape in plate bending rolls instead of through dies on a draw-bench. The tube in this form is then fed through a welding machine, where, instead of heating the whole tube the lapped edges only are heated bit by bit by the application of water-gas, or carbon hydrogen flame, followed by hammers or rollers, by which the welding is effected along the whole length of the seam.

When the use of mild steel became general, a great deal of attention was directed to finding a suitable method of producing tubes direct from solid bars, by which means of course, there would be no weld. Those tubes became known as solid drawn or weldless tubes. A great deal of ingenuity was displayed, but the difficulties to be overcome were so great that it is only within the last few years, and after the expenditure of very large sums of money, that any of these processes proved a commercial success. By far the greater part of the weldless tubes made to-day are produced by what is known as the hot-rolled process. As a rule cold-drawn tubes are only produced for certain special purposes, the cost of production being very much greater. The first operation in the manufacture of hot-rolled weldless steel tubes starts upon a billet of round steel bar, cut to such dimensions as will give the required size and length of tube.

The solid billets are charged into a heating furnace where the highest temperature is conserved at the drawing out end, so that the billet in its progress through the furnace is assured of a uniform heat throughout. A number of methods have been employed for piercing the billet and rolling it after piercing into a tube. The process now generally adopted for piercing is either in a hydraulic press or through a piercing machine, where the revolving action of the rolls of this machine cause a displacement of the metal in the centre, while at the same time forcing the billet over the mandril. The pierced billet being still hot is rolled out into a tube, either through grooved rolls over a mandril or by means of a pilger or gap rolling mill. After the tube comes from the hot rolling mills, it goes into a pickling tank to remove scale. Following upon this operation, the tube is finally finished by receiving one or more cold passes through a die on the draw-bench. The effect of cold drawing hardens the steel, and after each cold pass the tube is annealed.

The processes of manufacture of wrought iron and steel tubes briefly described in this short article, viz., the welded and the weldless processes, together constitute the methods by which practically the entire requirements of the world are supplied.

The industry of tube-making has grown to enormous dimensions. There are large works in most European countries, and in Canada and the United States. Great Britain, the pioneer of the industry, is one of the largest producers.

LEAD.

THE manufacture of lead is amongst the oldest of British industries, and within recent years it has developed into one of considerable magnitude and importance.

Among the chief uses to which lead is put is its conversion into white lead (hydrated carbonate), which, when ground with oil, forms a pigment of great value in itself, and is the most reliable base for practically all paints.

White Lead is also largely used in glazing pottery and porcelain.

The method of manufacture chiefly adopted in this country is the old stack process, which, though slow, produces white lead of great covering capacity, density and durability.

Red Lead (sesquioxide) is manufactured on a large scale, and is used, after mixing with oil, as a pigment for protecting ironwork, &c., and for jointing purposes; it is also an important ingredient in optical and other glasses, and during the war was in great demand for the electrical storage batteries used in submarines, &c.

Litharge (monoxide), a less known but equally important oxide of lead, is largely used in the rubber, varnish and accumulator industries.

Metallic lead is in universal use in civilized countries in the form of sheet lead for roofing, &c., and pipes for water and gas; and owing to its great acid resisting power, pure lead is extensively utilized in plant for the manufacture of sulphuric acid and other chemical products.

For chemical purposes the presence of slight impurities is sufficient to seriously

reduce the life of the sheets and pipe, and ingenious methods have recently been introduced for freeing the lead from all traces of impurities.

Alloyed with tin, lead forms solder, and lead alloyed with antimony is used for shrapnel bullets, type metal, etc.

Lead also is largely used for covering electric cables.

In Nature, lead occurs chiefly as a sulphide ore, which, after being mined and dressed, is calcined for the removal of the sulphur, and the roasted ore is smelted—usually in water-jacketed blast furnaces—to the metallic state.

The metallic lead thus obtained frequently contains silver of considerable value and appreciable quantities of gold and other metals.

Before such lead can be manufactured, the silver and gold must be extracted and the other impurities removed.

Impurities such as copper, antimony, and arsenic are eliminated by liquation and calcination, and the precious metals are usually recovered by stirring zinc into the molten lead: zinc, being lighter than lead and having a greater affinity for gold and silver than lead possesses, on cooling carries the precious metals to the surface, so that they can be removed by skimming.

Lead ore is mined to a small extent in the North of England, Derbyshire, and Wales, but the chief lead-producing countries at the present time are America, Australia and Spain.

In normal times the world's production of lead exceeds a million tons per annum.

SPELTER.

By the Editor of the "Metal Bulletin."

NO Industry was more gravely disorganised by the war than spelter. During the period of hostilities prices soared to preposterous heights for the reason that Belgium and Germany were the leading countries upon which we relied for supplies, our home production being comparatively speaking small. The situation indeed was exceedingly grave, for without spelter it would have been impossible for us to manufacture the munitions of war which were required, spelter having a particularly important military significance owing to the fact that it is a substantial component of brass, which finds enormous use in cartridges both for rifles and artillery. The cutting off of our usual supplies from the Continent proved a boon to the United States, whose manufacturers previously practically absorbed the American domestic production, the result being that output there was largely increased, and indeed formed the mainstay of supplies for the Allies during the period of hostilities. With peace concluded, Belgium began to get back to work almost immediately.

Before the war Belgian output was about 200,000 tons a year, largely obtained from imported raw material, and at the present time the country is producing at the rate of about 60,000 tons a year, output having failed to develop as might have been expected, seeing that in 1920 there was progressive growth month by month up to a total of 8,500 tons in December. American production has fallen off very greatly from the highest records, owing to depreciated prices, while Japan, which at one time promised to be a considerable factor, is now quite out of the picture.

It was anticipated in our last review that American production would tend to fall off when peace conditions in Europe were resumed, and this forecast has been fulfilled, the output there, which in 1916 and 1917 approximated 600,000 tons, having fallen by 1919 to a little over 400,000 tons. The extravagant prices to which the metal was driven under the stress of military requirements naturally stimulated American production very greatly, and many high-cost mines were worked profitably, which, when the market assumed a reactionary tendency, had to close down, with the result that the refining works also found themselves obliged to curtail operations. This is still the position there; Germany appears to be producing spelter at a fair rate, but no reliable statistics are available, although that country is estimated to have produced in the neighbourhood 50,000 tons during 1919, compared with about 280,000 tons during 1912 and 1913.

The English works which before 1914 turned out about 60,000 tons a year, have been idle for months (several of them since the middle of 1920), on account of costs, but there is some hope of a new start being made now that cheaper fuel and labour are available. Huge quantities of Australian concentrates acquired by the Government are on hand in the Commonwealth, and arrangements have now been made to dispose of a part of them to British smelters, thus enabling them to get back to work again.

Australia is a very important factor in the world's spelter situation, owing to the enormous supplies of zinc ores and concentrates produced there. Soon after the outbreak of war, an association was formed of all the Australian zinc producers, to control and dispose of the Colony's output of zinc concentrates and metal. An up-to-date plant is now operating in Tasmania which is intended ultimately to deal with large quantities of the raw material. Arrangements have been made to supply this plant with ample quantities of concentrates from Australia for several years to come, and as its production cost is said to be very low, a considerable output available for export to Europe and elsewhere should thus be attained. The control of the Australian concentrates is in the hands of the British and Australian Governments, and will remain so for a number of years yet. Important schemes were formulated to ensure treatment of these concentrates in the United Kingdom on a large scale, but the arrangement seems to have been misconceived and muddled.

The principal countries producing zinc ores are the United States and Australia, but substantial quantities are also furnished by Poland, Austria, Spain, Italy, North Africa, Mexico and Japan.

Spelter in peace times is used mainly for galvanizing, that is to say, as a coating to preserve iron and steel from atmospheric corrosion, but it also finds a very large use, as indicated above, in brass, of which it is usually a component to the extent of 40 per cent., the balance being copper. Large quantities of spelter are rolled into sheets and plates, which find wide application in a large variety of uses. British works are interested in this branch of industry, and big quantities of sheets are also produced in Belgium, Germany and America.

The world's production of spelter is estimated as follows.—

	1917	1918	1919	1920
AUSTRALASIA	3,550	5,450	6,000	9,500 tons
AUSTRIA	—	—	4,000	—

REINFORCED CONCRETE.

By the Editor of "Ferro-Concrete."

CONCRETE is a variety of artificial stone employed for thousands of years, and very much resembling some kinds of natural stone in the respect that it consists of an agglomeration of particles bound together by a cementitious substance. Thus, the rock known as conglomerate, or "pudding stone," contains pebbles cemented together in very much the same way as the pebbles are held together in concrete composed of gravel and Portland cement.

As there are many varieties of natural stone, so there are different kinds of concrete. In the latter, the particles of inert material, termed "aggregate," may consist of gravel, broken stone, or any hard and durable substance, and the binder may be lime or one of the various cements on the market, but in the present day Portland cement is almost invariably used.

The particles of the aggregate are carefully graded, or varied in size, so that they may fit together as closely as possible and reduce to a minimum the intervening spaces, or voids, the latter being further reduced by the addition of well-graded sand, or stone chips. The voids remaining are filled with cement and water, and after setting the mixture forms a dense and impervious mass.

As proved by buildings and other structures dating back to the days of ancient Rome, concrete is of practically everlasting durability. It is the only known material which continues to increase in strength with age, all others beginning to deteriorate or decay, slowly, but none the less surely, until no longer able to perform their duty. This process of decay necessarily involves more or less heavy annual maintenance charges, adding greatly to the ultimate cost, whereas in the case of concrete the first cost is the only and last cost.

Apart from its remarkable durability, concrete is impermeable by water or damp, of unequalled resistance to fire, and of great compressive strength. Therefore it has been widely used in building and engineering construction, ranging in importance from small dwelling houses to works such as the Thames Embankment and the great National Harbour at Dover.

Within the past quarter of a century, a further impetus to concrete construction has been given by the introduction of reinforced concrete. This combination must not be confused with concrete and steel working separately, or side by side, as in a building where steelwork is encased in concrete, or a floor formed of steel girders and joists connected by slabs of concrete. Reinforced concrete is a scientific combination of concrete with steel rods disposed so that the two materials work together harmoniously and to the best possible advantage. While concrete is very efficient and economical in compression, it is inefficient and uneconomical in tension. In beams, arches, piles, pillars and struts, some portions are subject to compression and others to tension. Therefore concrete used alone in such structural forms would be inefficient and costly. But the incorporation of steel rods in those portions subject to tension results in a highly efficient combination, wherein the most valuable properties of each material is fully utilised. Thus the steel rods are stiffened and held up to their duty, and protected against corrosion by the concrete, and the latter

acquires remarkable toughness and elasticity—two qualities not exhibited by plain concrete. Reinforced concrete may, in fact, be characterised as a kind of elastic stone capable of being used advantageously in structures of all kinds, and in forms of design very similar to those adopted for structural steel.

It would be impossible in this page to enumerate the different types of construction to which reinforced concrete has been applied during the past twenty-five years. Among them are buildings of every type, bridges and viaducts for road and railway traffic, roads and streets, reservoirs and tanks for water supply and drainage systems, colliery and various underground structures, dock, harbour, and river works, and floating structures such as caissons, barges, and ocean steamships. In a word, reinforced concrete has been applied to practically all classes of construction, including many of those in which masonry would be out of the question, and for which iron or steel has been generally regarded as absolutely essential.

One of the most interesting adaptations of the combination is in the making of piles. As first introduced in 1897, and still generally produced, the piles are moulded in advance, slung, and driven into the ground to form foundations for marine works or for buildings and structures on unstable soil. The toe of the pile is fitted with a steel point, and the head is provided with a helmet to prevent the concrete from being damaged by the blows of the driving ram. Various methods have been patented from time to time for moulding concrete piles in holes formed in the ground. In one of these methods a hole of irregular contour is made by means of falling rams, and the concrete is afterwards poured in. In another, a spirally reinforced tapered steel shell closed at the bottom, and containing a collapsible steel core, is driven into the ground, the core being drawn out when the required depth has been reached, and the shell is then filled up with concrete. In a third method, a steel tube with a cast iron point is driven to the required depth and filled with semi-fluid concrete to a height of some feet above the finished level of the pile head. The tube is then gradually drawn, and the concrete expands as it sinks so as to fill the hole completely. Reinforcement of any kind may be added before the concrete is poured into the tube.

In conclusion, it should be stated that reinforced concrete deserves the serious attention of all who are concerned in the encouragement of British industry, not only because of its structural and other advantages, but also for the reason that all the constituent materials occur abundantly, or are readily obtainable, in every part of the Empire. The cement required is produced by the calcination of clay and calcareous deposits, the aggregate and sand are usually found on or near the site of the work to be executed, and the relatively small proportion of steel used requires no workmanship or preparation before arrival at its destination. Moreover, the operations involved in construction can be performed by entirely unskilled labour under competent supervision. Therefore, reinforced concrete construction is of inestimable value as a means of utilising the natural wealth of the Empire, and of providing for the absorption of labour, thus helping to solve one of the greatest problems of the day.

BRITISH GRANITE QUARRIES.

By H. J. GRACE.

GRANITE primarily consists of quartz and orthoclase, biotite, muscovite, hornblende, augite; and is holocrystalline. Other minerals entering into its composition are plagioclase felspar, oxides of iron, apatite, zircon, garnet, epidote, cordierite, sphene, topaz and tinstone; calcite, limonite, kaolin and chlorite being among the resultant products of decomposition. Commercially, the term "granites" covers products that evade the strictly correct geological definition, such as syenites, diorites, granophyres, gabbros, greenstones, and in some cases grits.

Aberdeen quarries yield a true and distinctive granite; Peterhead, Kemnay, Dalbeattie, Creetown and Ross of Mull being other deservedly renowned centres of the industry.

In England, Leicestershire, Cornwall, Cumberland and Westmoreland are rich in areas of supply; Warwickshire also possesses local sources. Wales has large areas extensively worked in Carnarvonshire. Ireland has a considerable supply in several districts, notably in Newry. The Channel Islands produce a large quantity of material, and the Isle of Man has an extensive area; but difficulties of transport hinder the development of the Manx industry.

The first step in the opening of any quarry is the removal of the top soil, or overburden, after which lifts or levels are excavated of varying depths. The accumulation of spring and surface water during the operation of sinking, and afterwards, necessitates almost continuous pumping where the quarries are worked in excavations or pits. The granite having been bored, the faces are divided into motions, averaging usually about 10 yards in width up to about 20 yards, with a set of men to each motion. Preparatory to blasting, holes are drilled into the rock by hand or by means of steam drilling machines, the customary depth being from 10 to 12 feet, the deepest about 20 feet, with a top diameter of $3\frac{1}{2}$ to 4 inches. As a rule two to four charges are necessary, the first being so regulated as to be only sufficiently powerful to spring the rocks—that is, to loosen and open out their joints—the final stronger charge completing the work. Stones that remain unworkably large after the explosion are separately bored, charged with blasting powder, and reduced in size. Blocks intended for sundry specific purposes are roughly dressed below, prior to their removal to the surface for monumental, building, kerb or sett-making purposes and for the crushing or breaking mills. The carriage of the deposits to these mills is facilitated by tram-lines and effected by horse and mechanical power. In some instances the most up-to-date quarries have successfully adopted for this haulage an aerial power-worked cableway of extraordinarily

ingenious design, the system being suggestively known as the Blondin. Steel skips carried along this cableway have each a loading capacity of 50 cwts. and upwards. With clock-like regularity these receptacles are lowered empty, hauled up full, run swiftly overhead to the crushers, into the hoppers of which their contents are deposited, and then return to their starting place, to be again lowered and refilled. In the crushing mills the stones pass through breakers into rollers, falling into elevators and then into screens, which sort out the different sizes; rejections, or tailings, being recrushed.

In the dressing of stones for setts, kerbs, etc., the first or preparatory stage is carried out on the floor of the quarry, where the blockmakers shape them into the rough form in which they reach the settmakers and kerbdressers above. These settmakers exercise a wonderfully accurate judgment in deciding at sight how each block will shape best and with least waste under their hands. Into this judged shape it is wrought by heavy hammers, lighter ones being substituted for the finishing touches. For kerbmaking much larger blocks are used, the dressers wielding a variety of tools. For certain purposes, such as "Durax" setts, a stone-splitting machine of Danish invention, in the working of which a movement of the foot controls the action of steam hammers, has proved serviceable. The bursting of big stones of a size otherwise unwieldy has also to be accomplished by hand. An expert, with a sharp heavy hammer, nicks the line of fracture in about the centre, then draws the great block by striking it smartly at one end. After a varying number of blows it severs at the line made by nicking. Stones still larger are divided by what is known as the plug and feather process; the largest of all are drilled and blasted when the former process would be ineffectual. A trade is carried on in block or unbroken granite for breaking by hand on roads and in workhouses.

The latest available returns are those for 1920, in which year the total production of igneous rocks in England, Scotland, Ireland, Wales and the Isle of Man was 5,620,691 tons (made up of 5,602,913 tons under the Quarries Act, 17,307 under the Metalliferous Mines Regulation Act, and 471 under the Coal Mines Act), against 4,387,703 tons in 1919. Limestone (other than chalk) was produced to the extent of 11,227,517 tons (made up of 10,960,201 tons under the Quarries Act, 265,690 under the Metalliferous Mines Regulation Act, and 1,926 under the Coal Mines Act), against 9,537,495 tons in 1919.

The official returns for the same year accounted for 1,840 tons of manufactured and 97 tons of rough granite exported, and 40,138 tons of manufactured and 397,292 tons of rough imported.

BRITISH COMMERCIAL AND PUBLIC SERVICE MOTOR VEHICLES.

THE commercial motor vehicle, even before the war, was more widely and more intelligently developed in Great Britain than in any other country. This resulted partly from the fact that the British Isles are densely populated and contain important industrial areas, the needs of which are such as to encourage the development of means of direct haulage for a great variety of loads over comparatively short distances. Transport by railway is at a disadvantage unless distances are considerable, and a wide field has therefore existed in Great Britain for the heavier type of commercial vehicle. Then again, the population of British cities tends to straggle out into suburbs and rural areas. The big retail shops, therefore, find it desirable to organise direct deliveries over a radius quite impossible to horsed vehicles. Thus the lighter type of commercial vehicle has found a ready market and an ample opportunity of proving its efficiency and eradicating its faults as a consequence of practical experience. In a densely populated country, commercial motor vehicles become rapidly familiar to everyone, and the consequence is that the versatility which they undoubtedly possess is the more promptly appreciated. Only recently the dislocation of railway facilities occasioned first by the railway strike and then by the national stoppage of work in the coal mines, gave the motor opportunities of showing its power of actually replacing, and not merely supplementing, the services of the railway.

From all these considerations it follows that the British Industry is well experienced in the production of goods-carrying vehicles of a great variety of types, dealing with loads which vary from 5 cwt. up to 5 tons or more. It has also brought the motor omnibus and its kindred vehicles, the motor charabanc and coach, up to a high state of perfection. London, with its narrow streets and congested central area, has afforded an ideal testing ground for the motor omnibus, which it employs in far larger numbers than any other city in the world. In this respect the capital has provided an object lesson which has been appreciated by many other municipalities, so that, in the sphere of passenger carrying, as in the sphere of goods carrying, the British manufacturer has had the advantage of being able to watch and learn from a peculiarly extensive practical road test of his machines. Reference has been made to the adaptability of the commercial motor vehicle. This is illustrated by the success which has attended the construction in British factories of a great variety of special municipal vehicles, motor fire engines and escapes, ambulances, tower wagons, motor rollers and mowers, and tractors for use on the road and on the land.

During the past year the natural development of the use and construction of the heavier types of motor vehicle has, on the whole, been retarded by the general trade depression experienced throughout the world. This has decreased the demands for goods-carrying vehicles but, so far as Great Britain is concerned, the labour troubles which tended to accentuate the industrial depression had the effect of diverting a large volume of traffic from the railways to the roads, and so creating a specialised demand for motor transport. The stoppage of work in the coal mines was, of course, quickly followed by a diminution of travelling facilities by rail. This chanced to occur early in a summer season which turned out to be exceptionally fine. The public, despite the inadequacy of the railway services, was determined to travel, and the result was that motor coach operating concerns sprang into existence in large numbers, or developed from comparatively small into comparatively large concerns in the course of a single season. The motor coach was not alone in taking advantage of an unusual set of circumstances,

but motor omnibus companies equally realised the desirability of providing numerous country services. Round London, for example, motor bus services now run regularly, and particularly at week-ends, to places distant, thirty, forty, and even more miles.

The size of London has been an important factor in the development of commercial motor traffic throughout the country, for reasons indicated in the opening paragraph. London has in particular set a valuable example in the matter of the general adoption of motor omnibus services. The London motor omnibuses has to conform to statutory requirements as to weight and dimensions. In the early days it was believed that these requirements did not permit the use of vehicles capable of accommodating more than thirty-four passengers. After the war, however, a type, not exceeding the prescribed weight or dimensions, was devised to carry forty-six people, and even this has now been superceded by a more recent type having accommodation for no less than fifty-four passengers. Now the entire fleet of omnibuses working regularly in London does not fall far short of 3,000 vehicles, and has a total seating accommodation for upwards of 100,000 persons. During the year 1920, the vehicles of the London General Omnibus Company carried over 875,000,000 people, and travelled over 100,000,000 miles.

With an object lesson of this kind before their eyes, it is not surprising that the traders of London, followed by those of other great cities in the United Kingdom, have adopted commercial motor transport very freely, and that the public needed very little inducement to transfer its patronage to the road from the rail, when the facilities offered upon the latter had to be curtailed. It now remains for motor coach proprietors to stabilise their position by providing the best possible organisation for the collection, conveyance and delivery of passengers' luggage.

Despite the circumstances of a favourable character indicated above, the general depression in trade during the past year has been such that it cannot be claimed that the industry under consideration has been passing through a period of prosperity. The products of this industry, while offered at strictly reasonable prices, having regard to current costs and to the quality of the vehicles supplied, have still found only a limited market in a trading community compelled by the force of circumstances to cut down every expenditure to a minimum. The trader knows that his ultimate interests are best served by the purchase of vehicles of good quality, capable of giving economical service for a long period. Nevertheless, when there is a marked shortage of ready money, he may find himself compelled to adopt temporarily the inherently faulty principle of buying the cheapest possible article, regardless of its inferior quality. From the point of view of its permanent reputation, the British industry would have been wrong to have lowered its quality to meet the demand for cheaper goods occasioned by the slump, but for the time being the fact that it has refused to do so has rendered its difficulties all the more acute. The industry is also largely dependent on the development of its overseas markets, the demand in which has of late been reduced, not only by the general depression, but also by the artificial inequality of competition caused by the abnormal state of foreign exchanges.

At the time of writing the general trade position is improving and there is every reason to anticipate a rapid revival in the demand for the products of an industry the development of which is essential to every trading community, and also, as we have discovered in recent years, to every nation which sets any value upon military efficiency.

BUILDERS OF LONDON'S BUSES.

THE COAL TAR COLOUR INDUSTRY.

THE coal tar colour industry began with the discovery by the late Sir W. H. Perkin, in 1856, of a naive colouring matter derived from coal tar. A works was started at Greenford Green, in Middlesex, for the manufacture of this colour, and the manufacture of other colours subsequently discovered was in due course undertaken. Scientifically and commercially, therefore, this important industry is of British origin. The industry continued to grow, but, for a number of causes, which cannot be adequately treated here, the development took place almost entirely in Germany, and during the two or three decades preceding the outbreak of the war the various important industries in this country which required dyestuffs were dependent on German sources of supply.

Some idea of the general importance of the industry may be gleaned from the following figures. In 1913 we imported £1,731,000 worth of dyestuffs from Germany and £146,000 from Switzerland, and it is generally assumed that dyestuffs to the value of about £100,000 were purchased by British consumers from British makers. These figures indicate a total British consumption of approximately £2,000,000, and the enormous preponderance of Germany will be recognised.

It is not, however, the actual value of the dyestuffs which makes the industry so important, as the much greater value of the outputs of industries dependent on synthetic dyestuffs, notably the great textile industries of this country.

It is impossible here to examine in detail the importance of dyestuffs to the various dye-consuming industries, and the example of the cotton industry must suffice. The amount paid by manufacturers of cotton goods in 1913 to dyers, for operations involving the use of dyestuffs, exceeded £9,000,000, or more than four times the value of the total consumption of dyes in the United Kingdom. This is value of work only, and not the value of the dyed and printed articles. These dyed and printed cotton goods are consumed all the world over, and the value of the exports of dyed goods in 1913 (excluding such articles as hosiery, lace, ribbons, etc.) exceeded £70,000,000. These exports were sent very largely to British and other ports in Asia, where an increasing market is to be anticipated. Taking the dye-consuming industries together, it has been estimated that the value of the goods made in the United Kingdom in a year, the manufacture of which involves the use of synthetic dyestuffs, exceeds £200,000,000.

The war has shown, however, that the synthetic dyestuffs industry has much more importance than that of a principal key industry, for it is now realised that it is intimately associated with questions of national defence. Our late enemies, in an attempt to recover the initiative lost at the battle of the Marne, introduced a new element into warfare in 1915 by the use of a poisonous gas on the northern part of the western front. The method achieved a very considerable amount of local success, and there is no doubt that had the Germans waited until they were able to use their new weapon on a larger scale they would have recaptured the initiative and the whole course of the war would have been changed. A new arm, however, had

been successfully invented, and "chemical warfare" was added to the armouries of nations. The weapon developed as the war proceeded, and from the simple discharge of an elemental gas from cylinders placed actually in the trenches, there grew large numbers of complex substances, solid, liquid and gaseous, discharged in shells by the ordinary artillery or in special containers from special projectors. Every military requirement produced its special toxic substance and in the later stages of the war more than one half the projectiles fired were filled with chemical warfare products. This weapon, it is safe to say, will play a predominant and even decisive part in future conflicts.

The question arises: How could the Germans create and rapidly develop this new arm? The answer is because they possessed a fully developed dyestuff industry. The substances used in chemical warfare are intimately related, chemically, with those produced, in peace times, in a dyestuff factory. They are made from the same raw materials, in the same plant, by similar processes. It cannot be doubted, therefore, that the Germans were assisted, in coming to a conclusion to use toxic substances, by the fact that all the necessary plant and personnel existed in their great colour factories. The great bulk of all the toxic substances used by the Germans throughout the whole course of the war was produced in the dyestuff factories, and there was the most intimate association between the German General Staff and the managers of the factories, who were called in to advise on all matters affecting production for chemical warfare.

The Governments of the Allies, who were forced to adopt the use of toxic substances, found themselves in an extremely difficult position, for not one of them had the use of a dyestuff industry at all comparable with that of the Germans. It is true that Messrs. Levinstein Limited, in England, manufacturers of dyestuffs, rendered yeoman service, but the Allied forces were, on the whole, supplied from rapidly erected improvised plants. It is a great tribute to the energy of the Allies that they were able, in the course of so few years, to provide adequate supplies of chemical warfare substances for their armies in the field.

It is important to note that a large scale use of toxic substances in the opening stages of a campaign can have decisive results. It is not likely that any country will establish permanent chemical warfare arsenals, firstly because of the expense, and secondly because such a course is technically unsound. It is clear, therefore, that only a country with a fully developed dyestuff industry can conduct such large scale operations immediately after the outbreak of hostilities. Germany is the only country to-day in a position to wage chemical warfare on a really gigantic scale, and until Great Britain possesses a dyestuff industry commensurate with its needs, one of the greatest problems of national defence will remain unsolved. Every support must, therefore, be extended to the new British industry in order that it may be completely developed. Only then will the country be secure from economic aggression in time of peace and from military disaster in time of war.

THE COTTON INDUSTRY.

THE years since the War have brought many changes in the cotton industry. One movement, which began almost as soon as peace was restored, has now been put into correct perspective by the passage of time. The remarkable activity of the industry during 1919, especially as regards the first half of that year, attracted new money to it, and mills and factories, which from their inception had belonged to Lancashire, now passed into the hands of men of financial standing who had had no previous connection with either the county or the trade. This was by way of being a great change, for from the time of the invention of the spinning jenny by a Lancashire man financial interest as well as control had been localised. The "boom" of 1919 thus brought a new element into many old firms, that of investors who (except in so far as they became so in the indicated capacity) were in no way associated with the industry. But it is now seen that their coming has made very little difference. The industry has absorbed them and retains its ancient characteristics.

Historically, the cotton industry is as fascinating as in its ramifications of to-day it is complex. The record of its growth in England is of arresting interest. For centuries there was no change in the primitive method of hand-spinning, cotton being at first used in admixture with other materials; but in the second half of the eighteenth century inventive genius produced the jenny of Hargreaves, the water-frame of Arkwright, the mule of Crompton, and the power-loom of Cartwright. On these machines cotton was used as the sole raw material for certain classes of goods. Through these inventions the factory system began and developed. The power-loom and the mule proved the strongest stimuli: both leading to a very great augmentation of production. In 1779, the year in which Crompton perfected his implement, this country imported 6,000,000 lbs. of raw cotton; twenty years later the import had increased to 46,000,000 lbs.

Roughly, there are now about 150,000,000 spindles in the world, and of these Great Britain has nearly 60,000,000. It should be borne in mind that this country has a much larger proportion than any other of spindles adapted to the production of very fine cotton yarns. Our spinning, generally speaking, is of a highly-developed kind, some of the finest cotton fabrics in the world being produced on our machinery. In this respect we have a decided lead of other countries.

The industry under consideration is our principal export industry—a fact the more noteworthy in that it imports the whole of its raw material. About four-fifths of its products go to other lands. Our inability to grow the cotton plant in Britain has led to various developments of colonial enterprise stimulated and indeed controlled from Lancashire. The British Cotton Growing Association has carried

on operations with marked success in various regions of the Empire for many years, and in 1921 the matter was made one of national concern by the granting of a Charter by the King to the British Empire Cotton Growing Committee. American cotton remains the basis of the supplies of the industry here, and must do so for many years to come.

Organisation in the cotton industry is carried to its utmost limits. Well and compactly grouped in local associations, district associations, and so on, both employers and employees have central federations, and both have international federations. The International Federation of Cotton Spinners and Manufacturers, founded by Sir Charles W. Macara, Bart., has a record of wonderful work for the industry, and its reports, issued annually, are most valuable compilations, presenting world statistics and detailed information on every pertinent point.

Cotton interests suffered seriously last year during a period of very bad trade. The high costs of production so raised ultimate prices that poorer nations could not pay them; least of all, those whose monetary exchanges put them at a disadvantage. Towards the end of the year some slight improvement was perceptible, but the facts that Russia was still cut off from trading, Austria was in nearly the same plight, and—most important of all—that India's market was inactive, barred all hope of any immediate revival. Before the War India was the best market, but the increase of the Indian cotton duties, together with internal political disturbances, caused the demand to fall very heavily. What the full effect of the political troubles will be time alone can reveal, but in October last it was stated that there was a growing movement among "nationals" to refuse English goods, and that the "back to the spinning wheel" agitation had made great progress. The results on the home cotton trade will be watched with concern. The important factor that India cannot supply herself, and that the political disturbances (at the time of writing) are not so rampant as to restrain the people from buying needed clothes, should make for the advantage of this country during the present year.

On the whole, 1922 should be a prosperous year for the cotton industry of Britain. The stocks of manufactured goods throughout the world were very low in the autumn of 1921, while the reduction of cost of raw material, the agreement on lower wages and the closer co-operation of employers and employed, with other circumstances, had brought the prices of finished goods to more marketable figures. Everywhere in the industry the desire is for a large output at moderate profits, and with the re-opening of the world's markets Lancashire will be prepared to meet all calls on her for rich supplies of sound and reasonably cheap cotton goods.

VELVET AND CORDUROY INDUSTRY.

VELVET, one of the most ancient fabrics of history, was produced by the Chinese—probably made from cotton—at a remote date before the Christian era.

Velvet making, with other textile arts, slowly crossed the then more civilised continent of Asia, and the spacious times of the great Crusades brought textile arts into touch with the undeveloped western world. Persia, too, had her share in this evolution, and the influence of Persian design on figured and woven velvet is traceable in the productions of those European countries which succeeded to these arts in the western movement of civilisation.

It is interesting to trace its evolution from the East, through maritime Venice, Genoa, France, Flanders, and the Spanish Netherlands to Lancashire and Manchester, but the space of this article does not permit more than a brief mention of these stages.

Fustian may be considered the parent of the modern cotton velvet and its family connections. Its name was probably of Egyptian derivation, and in England of the Middle Ages it was the wear of the serving-man, whilst people of quality wore velvet. Probably what we now know as fustian was then made from the coarse wool of the country, and is known to have been combined with linen warps from Ireland. By 1641, Manchester had a reputation for its fustians which were then actually made from Cyprus and Smyrna cotton, and it is chronicled that the city had a considerable export of these goods to the Continent and America.

From this parent fabric were velvet and corduroy evolved, and fustian remains the family name covering all classes of cotton pile fabrics, velvets, velveteens, cords, moleskins, beaver-teens, imperials, diagonals, &c.

Many highly-specialised processes are necessary to convert the raw material into the beautiful finished article as seen in Regent Street or the Champs Elysées. The grey material is woven mainly in Oldham, Preston, Bolton, and East Lancashire, and subsequently focussed in Manchester, where the merchant arranges the various operations contributing to the successful production of the finished velvet or corduroy.

Nothing but the best material will produce the good grades—fine Egyptian yarns for strength in the warp, and soft, silky American of long staple for the weft—suitably spun to give the velvet touch. Of the numerous operations none is more intricate and important than that of cutting the pile. After preparatory stiffening and lining this operation, calling for much manual dexterity, consists in opening up the fine longitudinal tunnels, or "races," into which the cloth is woven, by means of a fine steel knife, sheathed in a long, finely-pointed guide which opens up the race, enabling the sharp edge of the knife to sever the top of the tunnel, leaving the walls, as it were, of tufts of pile standing. These tufts form the velvet.

Indifferent weaving, or poor material in the shape of low-grade cotton, would result in imperfections which would defeat the knife and damage would result.

A considerable development of machine cutting has taken place during this century. Many inventors in the last century have attacked the problem of cutting the velvet pile by machinery, but few of the many ingenious schemes have materialised. However, in recent times, one or two very effective cutting machines

have been introduced, and whilst the bulk of the work is still done by hand, it is evident the well-designed machine has a great future before it. Cords have been cut by machinery for a long time, but the bulk of the velvet cutting is still carried on by hand. Once a domestic industry, the stress of competition has evolved an organisation dealing with large scale production and output of good character.

The pile is next manipulated by brushes, shorn, singed, and made of smooth surface for dyeing. Careful workmanship is required in all these operations, and the fast dye is a necessary accompaniment of good quality velvet. After dyeing a beautiful finish is applied to the fabric, giving it a high degree of lustre, and the richness and lustre keeps its pride of place.

Standardisation, however desirable, conflicts with the varied requirements of customers from the Arctic Circle to the Equator, as, though the home trade consumes freely, probably 80 per cent. of the velvet production goes to overseas markets.

Plain dyed velvets are supplemented by beautiful styles of printed, figured, striped and brocaded velvets, and acid printing and shot effects are tastefully produced. Velvet supplies such diverse uses as ribbons and trimmings, elegant footwear and juvenile clothing, whilst corduroy clothes the rising generation.

Corduroy may briefly be described as velvet made with coarser, cheaper yarns, in stripes or ribs of almost infinite variety—from the thickest to the cable cord. A well-proved article of great utility, it gives endless wear and satisfaction to its world-wide users—rural Britain, the navy and the iron-worker find nothing to equal it; the constructional gangs of North America, clothed in corduroy, have built the American railroad system; South African farmers, Australian stockmen, French and continental peasantry—all these workers testify to the excellence of corduroy fabrics. The British and Allied War Departments discovered during the war what an unequalled material for hard wear was furnished in good quality corduroy. Furniture manufacturers and upholsterers have found the scope corduroy gives them in its beautiful colourings and high-class designs for house adornment.

Unfortunately, at present, the economic chaos on the continent of Europe is having an adverse effect on the velvet and corduroy industry. When Europe settles down and begins to work hard and produce steadily, the demand for the various products comprising this article will spring up again, and the depreciated exchanges may again permit of making business more stable in the outlets which velvet and corduroy normally seek. German competition is beginning to be felt once more. First-class dyes must be used in the production of velvet, and no fiscal policy tending to increase the cost of these, or diminish their efficiency, can be looked upon with favour by the manufacturers of these articles.

In the past, the Manchester manufacturer has not been much inclined to co-operate, but in the future a different attitude may be necessary. Attention must be given to research work, and it is probable that in the near future the advantages of co-operation will become more evident than in the past. This will help the Manchester manufacturer to place more effectively before the world the excellent qualities of the various cotton pile fabrics so well produced in that busy city.

LEATHER INDUSTRY.

By Dr. J. GORDON PARKER,
Principal of the Leathersellers' Company's Technical College.

THE Leather Trade is in magnitude one of the most important of Great Britain's staple industries, and at the same time the manufacture of leather is one of the most ancient crafts.

The origin of tanning is lost in antiquity, but specimens of leather exist in our museums which were taken from the tombs of the Pharaohs, showing that good leather was manufactured, and even excellently dyed and finished, some four thousand years B.C. Probably no important industry has undergone so little change in the essential principles as the "craft" of leather manufacture or ancient art of tanning. Even in this twentieth century the general outline of tanning is almost identical with that used by our forefathers before the Christian era, in that the basis is the hide or skin, and the tannin ingredient is still obtained from the barks and fruits of trees as of old.

In the reign of James I. we read of laws being passed restricting a tanner in the production of leather and rendering him liable to heavy fines and imprisonment if he attempted to accelerate his process under the normal number of years required to produce what was then considered a good sound leather.

One of the earliest forms of tanning was the oil or smoke tanning, which consisted of rubbing the raw skins with soft fat, and afterwards exposing them to the smoke of green wood, somewhat similar to the process still used by various Indian tribes. In the production of vegetable-tanned leather, the modern leather manufacturer has to thank the explorer and scientist for the great progress which has been made during the last two or three decades. Where oak bark was looked upon as almost the only source of the tannic acids, other barks, fruits and woods, much richer in tanning properties, have been discovered and are now in daily use. Their introduction has cut down the period of tanning, which was formerly years, to months and almost weeks, and not only has it been discovered that these newer materials from different parts of the Empire are richer in tannin, and therefore quicker in their action, but that judicious blends of certain of these materials produce even a superior leather to that produced by the use of oak bark alone.

Towards the middle of the nineteenth century the introduction of myrabolans from India and valonea from Asia Minor began to have its effect on our industry. Wattle bark from Australia and Africa, and many other materials, all have tended to build up the reputation of British-made leather.

In the early seventies a French patent was taken out for the extraction, concentration and decolorisation of tanning extracts, and there sprang up, first in France and Hungary, and afterwards in U.S.A., factories where the oak and chestnut wood was extracted in close proximity to the forests, and under scientific principles concentrated in the form of liquid or solid extract containing 25 to 60 per cent of tannic acids ready for direct use in tanneries. The introduction of these extracts had a marked effect upon the tanning industry, reducing the period of tanning, and producing a leather of equal quality at lower cost.

Each of the various tanning materials possesses certain characteristics, and the art of tanning high-grade leather depends on the knowledge of how to blend these materials, and at what stage in the process each should be used in order to give the best results for the various purposes for which the leather is required.

Our tanneries are converting over one hundred and seventy thousand hides per week into heavy leather,

of which number only approximately fifty thousand hides come from our own native cattle. In the light-leather industry, excepting for our own supply of sheep and calf, some millions of skins have to be imported for the manufacture of upper leathers for boots and fancy leathers for upholstery, bookbinding, purses, pocket books, and other similar articles.

GLOVE LEATHER.—The glove manufacturers of Great Britain have had a reputation for the production of high-class glove leather of the heavier grade, suitable for the manufacture of men's gloves—this product being made from Cype sheepskins.

In the manufacture of lighter fancy gloving leathers, the manufacturers of this country had not, up to the commencement of the war, been able to compete with Continental importing houses for these more artistic productions. Great headway has to be reported in this branch of the industry. The production of fancy leather for ladies' gloves, both in glace and suede finishes, has made very considerable headway, and these products now compare favourably with the best quality imported leather, and in many cases, show considerable improvement.

White "washable" glove leather is a British production which has created a great demand, owing to its property of being washable, which operation can be carried out many times; gloves made from this leather thus being economical in wear.

LEATHER FOR ARTICLES OF WEAR.—During the last year, leather has been more generally adopted as an article of personal attire. A large number of ladies' hats are now being made of suede leathers and this and other leathers are also being employed to a very considerable extent as trimmings for ladies' dresses. One of the most recent innovations has been the manufacture of ladies' jumpers. It would appear that this material dyed in tasteful shades of colour is likely to become fashionable.

LIGHT AND FANCY LEATHER.—The manufacture of leather from the skins of sheep, goat, calf and seal, as used in the fancy leather goods trade, has long been a specialised branch of the leather industry in which Great Britain excels. The tanning of these goods is, in the main, confined to the use of shumie, a tanning material imported from Sicily. This tanning agent is particularly suitable because of its light colour, thereby enabling light and fancy shades to be dyed on the tanned leather, and because of its wearing properties. The British dyer has a reputation for the production of leather which has been coloured in "art" or fashionable shades, and now that British dyes are available in increasing quantities, the trade is rapidly recovering from the set-back which it had during the war period caused by the patriotism of the fancy leather manufacturers employing their energies in the production of boot and equipment leather required by our own and allied armies.

CHROME TANNING.—In 1881 the first patent was taken out for the production of mineral tanned leather by the chrome process. This method, which consists of impregnating the fibres of the raw skin with chromic acid, which is subsequently converted into chromic oxide, results in the production of a leather which, when properly manufactured, is superior in wearing properties to that which is vegetable tanned, and possesses the additional property of being waterproof and of lighter weight, and when manufactured into boot-upper leather, of smarter appearance. The process of chrome tanning is very rapid, it being possible to convert raw pelt into leather in as short a period of time as three to four hours, although a much longer time than this is given in actual practice. Great progress has been made in the chrome tanning industry. British manufacturers were at first slow in taking full advantage of the newer process, but the development of this industry during the war and since the armistice has been such that when the factories at present under construction are completed, the British shoe manufacturer can be practically independent of foreign supplies; whereas six years ago probably 50 per cent of our requirements were imported.

BRITISH BRUSH-MAKING.

By T. MARSON TILL, Secretary of the British Brush Manufacturers' Association.

THERE is hardly a household, factory, workshop, or institution that exists where brushes of some kind or other are not used—yet few people seem to know how or of what brushes are made.

It is perhaps little known that the bristle used for brush-making throughout the world is grown on the semi-wild boar in Russia, China, and India.

Although bristle is the most important material used in the industry, brushes are also made from the hair of the horse, bear, goat, badger, squirrel, sable, and other animals—from fibre from the Mexican aloe tree—from piassava (bass), kitool, cocoon, and other fibres from various tropical palms.

The manufacture of brushes is divided roughly into five branches:—

1. Brushes "drawn" with wire or thread.
2. Painting and shaving brushes.
3. Brushes and brooms set with pitch, etc.
4. Twisted wire brushes for flues and boilers.
5. Ivory and bone hair and tooth brushes.

WIRE-DRAWN BRUSHES.

Include toilet, stable, and household brushes, such as scrubs and shoe brushes.

Tufts or knots of bristle or hair of double the length required are placed under loops of wire, which are passed through holes in the back of the brush and then drawn back with the bristle, thus bending them double and causing both ends to stand upright together. On the back of the stock is now glued and screwed a piece of decorative wood to cover up the wires and bent tufts showing through. The brush is then finished and polished.

Some of the commoner sorts of "drawn" brushes are made by plunging the "knots" with staples into the board by machinery, and this process has considerably developed during the war. **PAINTING AND SHAVING BRUSHES.**

There are two classes of *painting brushes*—those for painters and decorators and those for artists.

Before painting and other bristle brushes can be made, the bristle, which is the most expensive part of the brush, has to be sorted and "drawn" into certain lengths from the raw bristle, washed, mixed, and tied into knots of required sizes and stiffness, so that the bend of all the bristles faces inwards, and the flags form concentric rings. The buying of suitable bristles and these operations require much skill and training.

The knots of bristles when so finished are concentric at the roots, and are bound on to the handle by string or wire, or are driven into a socket. A new process under which the roots are set in vulcanised rubber is being developed with success.

Artists' brushes are made from hair taken from the tail of the sable, marten, kolinsky, and squirrel, and also from bristles. They are set in quills of various sizes, or in metal. The work is chiefly done by girls. The firms in England who specialise in artists' brushes are few in number.

Shaving brushes.—The hair from along the middle of the back of the badger is the best hair from which these brushes are made. Goat hair and bristles are also used and made to imitate badger, and unless the brush is stamped "badger hair" it may generally be taken that the brush is made of a mixture of hairs. The best badger hair is worth to-day about 300s. per lb.

BRUSHES AND BROOMS.

An entirely different process, known as "setting," is employed in the manufacture of these.

A knot of hair, fibre, or bristles is taken and the root end dipped into boiling pitch, bound with a thrum, then dipped again and inserted into a hole already bored in the wooden stock, a slight twist being given in the process to splay the hairs.

TWISTED WIRE BRUSHES FOR FLUES AND BOILERS.

These are chiefly made by special machinery. **IVORY AND BONE HAIR AND TOOTH BRUSHES.**

This is a distinct branch of the trade, although most of the brushes come under the heading of "drawn" work.

Bone nail brushes are almost now entirely superseded by wooden ones.

Although the antiquity of the brush trade itself is not very great, the following early references to brushes are on record:—In the year 1377 A.D., "or wyped it (a coat) with a brushe." In the year 1519, "Olde men brusshed theyr dustye clothes with cowe tayles: as we do with hear brusshes." The painting brush used by artists is probably the oldest type of brush. The few hair brushes that were made 120 years ago for the toilet were constructed on the principle upon which the modern broom is made—that is, the hairs were set in with pitch.

In the cheaper and commoner kinds of brushes foreign competition made some headway prior to the war, but in the better class of goods the British trade has always more than held its own.

Statistics give the following values of the trade:—

	Imports.	Exports	Re Exports.	Home Trade
	£	£	£	£
1907	—	—	—	1,828,000
1913	456,141	237,312	22,167	—
1914	354,903	216,236	18,605	—
1915	377,578	187,162	14,107	—
1916	432,043	236,298	19,410	—
1917	90,287	213,887	8,144	—
1918	407,567	171,122	4,530	—
1919	850,633	291,297	57,337	—
1920	910,155	588,340	41,883	—
First 9 months, 1921	852,685	281,617	Not yet known.	—

In the year 1908 the British Brush Manufacturers' Association was formed, and now has a membership of 112 of the leading manufacturers in the country.

The Scottish, Irish, and Northern Counties Brush Manufacturers' Associations, and Master Bone Brush Makers Association, representing 117 manufacturers, are affiliated to the B.B.M.A., which thus represents 229 brush manufacturers.

The Association has standardised the stamping of brushes as to weight and material used, and has established the difference between bristles and hair—bristles now being strictly recognised in the trade as only the hair of the hog, pig, or boar.

The Government and Municipal bodies recognise the Association as representing the Trade.

A Trade Board consisting of 14 representatives from the B.B.M.A., and 14 representatives from the trades unions concerned, has now been established to settle minimum rates of wages for the trade and other matters appertaining thereto.

BEST BRITISH BRUSHES

THE TOBACCO INDUSTRY.

IN 1492, Christopher Columbus, in eager pursuit of knowledge of the hinterland of the new territories whose coasts he had been the first to reach, sent out a party of men from his ships to explore Cuba. The little expedition made a great discovery. They found tobacco. The first European consignments of the herb reached Spain in 1558, and in 1586 Ralph Lane, the first Governor of Virginia, and Sir Francis Drake introduced it into England, leading the way for the establishment of a British industry the history of which has been one of continuous and uninterrupted development. Of the about fifty known species of *nicotiana* nearly all are natives of America, than which few others are of economic importance. The great bulk of the world's tobacco supply is derived from *nicotiana glabrum*, the Virginia tobacco, originating in some part of Central or South America, now cultivated in many other regions. The growths of Cuba, the United States, the Philippines, and Latakia, are derivatives from this species, which is also extensively cultivated in India. *Nicotiana persica*, the source of the renowned Shiraz tobacco of Persia, appears to be only another variety of the same stock, and to have been introduced from America. East Indian (green) tobacco is the product of a different species—*nicotiana rustica*, an indigenous Mexican plant, which thrives in Southern Germany and Hungary.

Tobacco is cultivable in numerous diverse climatic conditions and varieties of soil, but in quality and flavour is radically affected by the locality and circumstance of its growth, its characteristics being influenced by very slight differences of climate. It will grow wherever climatic conditions are congenial, but the type of its product is chiefly dependent on the nature of the soil. Experience proves that only practical experiment can determine where it can be cultivated to advantage.

Supplies from America exceed those from the whole of Asia, and the latter exceed those from the whole of Europe; Africa coming in a long way last. As regards sources of supply within the British Empire, for local consumption tobacco is cultivated in many parts of India, and on a commercial scale chiefly in the Presidencies of Bombay and Madras and in the Punjab; Northern Ceylon yields a kind unacceptable on European markets; British North Borneo competes with Sumatra in the matter of a leaf in especial favour with cigar makers; British African yields are much more considerable than those of Australia; in the West Indies, only in Jamaica have operations the status of an industry. Some success has rewarded recent attempts to make cultivation in several English counties, and in Ireland, a practical proposition.

Grown under differing conditions in so many places, methods of cultivation and preparation

vary, most interest attaching to those in use on the plantations of the United States. Here the seeds (so minute that between 300,000 and 400,000 only weigh a single ounce) are sown in specially prepared nursery beds, from which, after about 60 days, the young plants are removed to be set out in fields, from 10,000 to more than 11,500 of them to one acre. About 95 days after transplantation, the crop is ripe, the computation being that on average about 40,000 plants reach a healthy maturity from every ounce of seed. The drying of the gathered leaves can be effected by exposure to the sun, a similar method being air-drying; but the usual and quicker agency is a fire-heated temperature. During the fermentation that is set up after the dried leaves are stacked, pains are essential to ensure its uniform distribution.

Tobacco reaches the British manufacturer in the form of bunches of tightly-compressed leaves, which are separated, damped and re-dried. Careful division into grades and classes and skilful blending precede conversion into pipe tobacco, cigarette tobacco and cigarettes, and into cigars. It is in relation to the British cigar that the British Tobacco Industry of to-day has made an advance of especial interest. Although the home manufacture of this article dates back to 1790, it has only now reached perfection, a specific incentive encouraging a sudden development. The imposition on Havana cigars of an ad valorem duty of 50 per cent., in addition to existing duties, so raised their price to the consumer that, except to the few, they became a prohibited luxury. British makers appreciated their opportunity and took advantage of it. Securing consignments of the choice leaves jealously reserved for so long by the foreign grower for his own use as "wrappers," their one serious obstacle was removed, with the result that they now produce a British-manufactured cigar that, in every essential quality and attribute, claims to be indistinguishable from the imported cigar of high rank, though the latter costs its smoker so very much more. The secret of the success of the at-last perfected British cigar is in the blending of the flavours and other characteristics of selected tobaccos from various sources, the principal being Havana, Borneo and Java.

The making of a cigar is a simple process to witness, but calls for the exercise of such nicety of judgment and delicacy and dexterity of touch that the operators in reputable factories are men who have served an apprenticeship of five years. The "fillers" that compose the core are of a corresponding quality with the shaped leaf that covers them, technically the "binder," the outer covering round which is the "wrapper." On the quality of this the quality of the finished whole finally depends—hence the reservation for the indicated purpose of the choicest leaves the world can produce. In one respect the smoker of British manufactured tobacco in any of its forms has a guarantee that does not apply to tobacco of foreign manufacture, in the damping of which water is allowed to be "sauced" with mixtures that include such adulterants as common salt and saltpetre; whereas here the law prevents anything being added to pure water.

SEEDS INDUSTRY.

THE culture of seeds is an industry of both vital national concern and of individual interest. In one ramification or another it is a factor in the life of each and the lives of all. On an adequate and well-conditioned supply of agricultural and vegetable seeds depends the adequate and healthy supply of essential foods; thanks alone to the availability of flower seeds any man, however poor, can grow his own little Eden; by grass seeds bare wastes are transformed into green pastures rich with sustenance. Lawns that delight the eye are created and maintained, spaces are carpeted that serve the ends of pleasant recreation and beneficial exercise. Royal appreciation of the importance of the subject under brief review has been twice signified in our time, the visit of their Majesties King George and Queen Mary to the Royal Seed Establishment at Reading in 1918 having been preceded by a visit there of his august father when Prince of Wales; the public interest these visits aroused reflecting the interest in seed culture of all classes of the community.

For long the commerce in seeds lacked system and organisation, and many abuses flourished. Adulteration was the rule. Mechanical means were in use for killing the vitality of cheap seeds without affecting their appearance, guarantees being offered by the owners of the mechanisms that not a single seed subjected to the process could by subsequent germination betray the fraud in which it was to be an item. These killed cheap seeds were mixed and sold with dear seeds of a different species but of similar form and colour. For instance, killed rape at threepence a pound was mixed with cabbage, broccoli and other round seeds worth many shillings a pound. In the early years of last century the scandal of this and other malpractices became so great that an agitation was set afoot which resulted in a commission of inquiry, and ultimately to the passing of the Seeds Adulteration Act.

If genius be an infinite capacity for taking pains, seed culturers on a commercial scale are a race of geniuses, for in almost every detail of their work at its every stage meticulous care must be exercised, in conjunction with exhaustive knowledge and experienced judgment, which without painstaking would be wasted. They have to deal with numerous species and innumerable varieties of each. To illustrate the multiplicity of varieties in floriculture alone, of asters there are more than two hundred, of stocks almost as many, and of sweet peas at least one hundred and seventy, other species being equally diversified. This prodigality of variation is by no means confined to flower species. The ordinary person knows of only

one sort of blackberry—some few years ago four hundred new varieties were discovered in China. It is not worthy that the tendency of varieties to revert to their original type, which all breeders of live-stock have observed, is equally persistent in the vegetable kingdom. The fertile seed of a variety germinates to species, but not with any degree of certainty to its own variety of that species. The peculiarities of varieties are perpetuated by other means.

In such qualities and characteristics as the longevity of their vitality, the duration of the period of germination, and their hardihood (there are some not injuriously affected by either boiling or freezing) the seeds of different species are in extreme contrast, but the conditions required for germination are in principle the same—exposure to moisture and a certain quantity of heat, communication with the atmosphere being also necessary for the maintenance of a healthy state. A seed, when fully ripe, contains a larger proportion of carbon than any other living part, and so long as it is thus charged with carbon it cannot grow. The only means of ridding itself of this element, essential to its preservation but an impediment to its development, is in the conversion of the carbon into carbonic acid, for which a supply of oxygen is necessary. This it procures from the water absorbed in germination, fixing hydrogen, the other element of water, in its tissue. With the carbonic acid thus formed it partly means of its respiratory organs, until the proportion of fixed carbon is lowered to the amount suited to its growth.

The typical Seed Establishment of to-day is a colony of experts. Growing on their own lands for the sake and purpose of seed harvesting, the cultivators are sponsors for their produce when it passes into the hands of growers for other purposes. Farm seeds, grass seeds, garden and kitchen garden seeds must all be tested, the unfit and the unlikely be eliminated; means must be taken to preserve pedigree stocks from extinction or decadence. All this entails scientific, costly and elaborate equipments in some departments and an unerring discrimination and ceaseless watchfulness in all.

Since the reform and consolidation of the seed industry more than a hundred years ago, its history has been one of continuous extension and development. It has been, and is, importantly influential in advancing British interests at home and overseas, its export returns running into big figures, even in this age of big figures. British-grown seeds are in preferential demand all over the world. A feature of the trade is that the smallest customer may buy direct from the largest producers.

THE PIANO AND GRAMOPHONE INDUSTRY.

WHILST the following notes relate more especially to the piano and its up-to-date prototype, the player-piano, they are also applicable to the gramophone which, not wholly without justification so far as the better types are concerned, has acquired the status of a musical instrument, and cannot be separated from any review of the musical instrument industry.

The past year has probably been the most difficult one which the British musical instrument trade has ever been called upon to face, and records at least the failure of one eminent house.

That this depression was less due to conditions peculiar to the trade than to those which equally affected other British industries is the only satisfactory feature to record. Summarised, these conditions have been:—

- (1) Limitation of home demand as a result of excessive taxation.
- (2) Heavy decreases in values of stock.
- (3) Inability, mainly due to exchange disparities, to trade in the foreign markets.
- (4) German competition.

The latter is placed last because, whilst the threat of German competition bulks largely in the popular eye, it has yet to be demonstrated that, save in the cheapest grade of goods, the German makers can redress the disadvantages of the present tariff and at the same time give a greater value than the British maker. For them to do so will become increasingly diffi-

cult as the value of their currency tends to rise.

Labour conditions have become more satisfactory, the Trade Unions concerned wisely acquiescing in the reduction of a wage which was severely hampering the trade. Due to this and other reasons, prices fell considerably during 1921, and to-day may be regarded as having become stabilized, an important consideration for the purchaser.

Most products, like vintages, acquire a special quality in certain years and for a variety of reasons, including which are those of improved labour and renewed access to the best grades of material, the British piano of 1922 should reach the highest point of value since 1914. One notable fact is that the so-called "German tone," which enjoyed a popularity not wholly undeserved before the war, has been perfectly duplicated by the more enterprising British makers for the benefit of those customers who seek this feature.

The gramophone has benefited by the great amount of research work devoted to sound reproduction in recent years, and whilst its evolution may not yet be so complete as that of the piano, an extraordinary degree of excellence has been reached in the best makes. 1921 saw considerable strides in recording, largely due to the entry into this industry of one of the leading British musical houses; it is widely claimed that their product marks a great artistic advance.

At the striking of the first chord

on a Weber Piano you realise why it has been chosen by the world's first professional pianists in preference to all other makes.

The Weber Piano

has a grandeur and sonority of bass tones, a crystalline purity and brilliance in the upper registers, and delicacy and responsiveness of touch that delight every pianist who plays it

All the latest models are on show in our Showrooms.

THE AEOLIAN COMPANY, LIMITED,
AEOLIAN HALL, 131/7, NEW BOND STREET, W. 1.

The **AEOLIAN 'VOCALION'**

The perfect gramophone that you can play

Silvery tones, golden tones, velvet tones, ring from the throat of the Aeolian 'Vocalion'—limpid, pure—truest replicas of the glorious sounds that left their images graven upon the record. All 'Vocalions' are equipped with the 'Graduola,' giving a most delicate and artistic control of tone. The 'Graduola' is one of the most vital inventions in the history of the gramophone. It makes these great modern musical instruments a practical medium for personal musical expression.

The Perfect Combination — The 'Aeolian Vocalion' and the 'Vocalion' (true to life) Record.

THE BISCUIT INDUSTRY.

6

"BISCUIT" being, lexicographically, dough twice baked, the making of biscuits is—in the indicated sense—probably older than civilisation, but as applied to the modern commodity with which we feed ourselves and the world the word itself is by way of being a misnomer, for only one of the article's very numerous varieties—the rusk—goes a second time into the oven. The cracknel, however, is twice "cooked," being boiled before it is baked; and the cracknel is the oldest biscuit known by a distinctive name. It is mentioned in 1 Kings, xiv. 3: "and take with thee ten loaves and cracknels." Biscuits have always been made, but it was only their comparatively recent manufacture by machinery that elevated biscuit making to the status of a great industry. It is an industry in which British supremacy is undisputed and indisputable. We make far more, and incomparably better, than any other country. The British biscuit is ubiquitous. A curious instance of its "peaceful penetration" into the least likely regions was mentioned by the commander of the British troops who entered Lhasa in 1904. In this sealed city of Tibet (in which, it is said, only one white man had ever been before) he was offered a biscuit made in Reading—where is situated the first-built and largest biscuit factory in the world: this ancient English town having been selected as its location partly because of its nearness to the finest and most suitable wheat-growing areas.

The magnitude of the modern British industry of biscuit manufacture represents, as already implied, an instance of rapid development, for its beginning synchronised with the cheapening in price and increase in quantity of flour and sugar that resulted from legislative action and other causes not longer ago than some eighty years, the invention and adoption of scientific mechanism being co-incident. The primitive methods this mechanism superseded would generations ago have proved hopelessly inadequate; and to reflect on what a comparatively biscuitless England would now mean to us is to realise that of a truth the pioneer of the new system did "the State some service": to draw imaginary lines from the site of the works he established to the overseas sources from which they are to-day supplied with rice, mace, currants, sultanas and other fruits, almonds, nuts, spices, ginger—not to enumerate other ingredients of utility and luxury which enter into the composition of some of the products of any typical biscuit factory to-day, the making of cakes usually being combined with the making of biscuits—is to realise that the trade has played an important part in the promotion and consolidation of British commercial interests in our colonies and protectorates and in every civilised country; while at home it has permanently and expansively enlarged the market for British flour, British dairy produce and British eggs, increasing in addition the demand for timber and metal for the construction of packing-cases and tins, and of other goods for divers purposes.

Detailed statistical particulars would be bewildering rather than enlightening where so many items are involved, but the following facts will be sufficiently suggestive. The returns of the Great Western, London and South-Western,

and South-Eastern Railways show that the output of biscuits and cakes from one factory alone, and the delivery of materials for their manufacture, require annually more than 62,000 railway trucks.

In the beginning the export trade in biscuits owed much to the great Crystal Palace Exhibition of 1851, which was a means of spreading the knowledge of the proved superiority of the British comestible. Similar results followed other International Exhibitions—notably the Great Paris Exhibition of 1878.

To witness the process of manufacture in an English factory of the first class is to discern why the British biscuit has won the reputation it can never lose while those processes are conducted as they always have been and are to-day. In themselves, accomplished by the operation of the most ingenious machinery, supplemented by the labour of thousands of skilled hands, they are simple, but at every stage of each the most meticulous care is exercised, the most elaborate pains are taken to ensure that each finished article is individually flawless and faultless. The absence of any adulterant is not enough—every ingredient, separately examined, scrupulously tested, must be not only good but the best, not only pure but the purest, and free from acquired as well as native defect. As illustrative of the precautions taken, two examples will serve. The scrutiny of currants is so close that each currant out of millions of currants comes under it, and the methods by which they are cleansed and freed from even the tiniest of stalks, and the smallest specks of dirt and dust, occupy 36 hours. Each egg out of millions of eggs is twice tested—first by electric light, unbroken, and then after it is broken. In composition, taste, size, shape and price the differences are many and great, but in the preparation of all descriptions, and in every department, the same rigidity of principle is strictly observed.

This high standard was originally set by the first firm to transform biscuit making from a casual occupation into an organised manufacturing enterprise of national and international service and importance. Consistently adhered to, it has become the accepted standard, and helped to put a reality of meaning into the familiar phrase "British and best."

It remains to refer to the dietetic value of the biscuit, which is greatly enhanced by the variety of its classifications. It is at once a food and a delicacy, a meal and a tit-bit, and in at least one form has medicinal virtues. It satisfies the hunger of the robust and tempts the appetite of the sick and convalescent. From the commissariat of no expedition is it ever omitted—it has helped to sustain life in Arctic cold and Tropic heat. During the Great War vast quantities were especially made for our soldiers on all the fronts and our sailors on all the seas. It is nourishment in the handiest and most portable of forms, and differs from many concentrated foods in that each one of its constituents has a dietetic value of its own, besides the value of them all in combination.

Although the ship or cabin biscuit is no longer the necessity that it used to be, no vessel ever sets sail biscuitless. It is a truism that trade follows the flag: the British biscuit goes with it.

**The true worth of all things
depends first, last, and al-
ways upon their Quality**

In the cupboard of the English housewife, on Continental tables, in the traveller's satchel, wherever the foot of civilised man has trod, there Huntley & Palmers Biscuits are.

For eighty long years their reputation has steadily increased. From small beginnings Huntley & Palmers manufactory has become a landmark of industrial England.

The history of this success is the history of Quality. Consistent with their quality, Huntley & Palmers Biscuits are the cheapest on the market.

Next time you buy Biscuits—remember this.

THE BRITISH PENCIL INDUSTRY.

By G. H. MEADMORE.

THE manufacture of lead pencils in similar form to the familiar article of to-day dates from a period immediately following the discovery of the once famous Borrowdale mine, situated a few miles from Keswick, in Cumberland, in the year 1564. At a much earlier period metallic lead was used for marking on parchment, paper or other material, and it is doubtless owing to the earlier use of this substance that the erroneous term "black lead" has been applied to plumbago or graphite.

The history of the lead pencil for nearly three centuries is closely associated with the fortunes of this mine, and it is probable that in no other part of the world has similar graphite been found equal to that found there. Analyses, however, which have been taken of the Borrowdale graphite show that it was not of exceptional purity, but it was the physical condition in which it occurred that gave it its value for pencils. The product was in such great demand and was so closely maintained as a monopoly, that, in pursuance of an Act of Parliament, the mouth of the mine was guarded by an armed force, and to maintain the monopoly and conserve the supply, the mine was only worked during six weeks in each year. To prevent pilfering, the mine was closed by flooding. The graphite was sold by public auction in London, and for many years the Cumberland mines were probably the only source of supply for pencil making. The graphite was used in its natural state, being cut or sawn into rectangular sticks and enclosed in their wooden casing. This method was not economic, and towards the close of the 18th century, when the deposits began to show signs of exhaustion, and also during the early part of the 19th century, efforts were made to discover a means by which the waste which had accumulated in the factories and the residue from the mine could be utilised. Pulverisation, with the addition of a binding medium such as glue, isinglass, argum, was tried, but without marked success, and was eventually abandoned in favour of the process originated by Conte, a French chemist, in 1785. By this process finely-ground graphite is mixed with clay, formed into strips, and baked. This invention marks the most important step in the manufacture of the modern pencil, and is the process now in universal use.

Graphite, of which there are two distinct types, viz., foliate or crystalline, and compact or amorphous, has since been found in many parts of the world, but that mostly used by the pencil manufacturer comes from Mexico. Foliate graphite is difficult to grind to the required fineness, and is less brilliant in colour than the amorphous, which, on the other hand, can be ground to a gritless fineness, and is of a nature which combines readily with other materials.

The manufacture of modern pencils requires great technical knowledge, combined with practical experience, and involves a large number of operations. The graphite, which has already been prepared at the mines, is mixed with clay in a dry state, then moistened and milled to the requisite fineness. Filter presses free the "batch" from an excess of moisture, and it then passes through a series of compressors, from the last of which it is extruded through a hole or holes slightly larger than the actual thickness required, to allow for shrinkage, and the "strip" is thus formed. At this stage it is in plastic form. It

is laid out in trays, in lengths of about 22 inches, and after drying is ready for baking. The degrees of hardness are primarily obtained by varying the proportions of clay and graphite.

Nearly all high-grade pencils are made of cedar wood, which, owing to its softness, straight grain, and freedom from knots, make it peculiarly adapted for this purpose. The red cedar, or pencil cedar, belongs to the juniper family, being the *Juniperus virginiana*, which is found at its best in the south-eastern States of the U.S.A. The wood is usually imported in the form of "slats," i.e., strips about 7½ ins. long, ½ in. thick, and from 2 ply to 6 ply in width, 6 ply being the width of 6 pencils. The slats are grooved, coated with glue, and the lead strips inserted. Two slats, one of which contains the strips, are glued together, and the blocks thus formed are fed into the shaping machine. This machine cuts a series of semicircular grooves on each side of the blocks, converting them into shaped pencils. The pencils have then to be sand-papered, coloured and polished, the ends cleaned, and finally stamped and bronzed.

The raw materials employed in the manufacture of coloured pencils are clay, wax, and a colouring agent, but the clay is of a softer nature than that used for black pencils. Bohemian clay having this requisite property, has in the past been greatly favoured for this purpose, but clay eminently suitable for the purpose exists, however, in the United Kingdom, and British aniline dye suitable for the production of copying ink pencils is now obtainable. As a result of careful research work the technical difficulties in regard to the manufacture of coloured "strip" have been surmounted, and to-day British copying ink and coloured pencils, of high grade, including dermatograph pencils for surgical purposes, and pencils for marking on china and glass, are being produced.

The Pencil and Colour Industries are closely allied, the pencil manufacturer being dependent on the colour manufacturer for colours, often specially produced, and it is this connexion which has largely contributed towards the pencil industry being so successful in Germany. It is obvious that with this handicap the British pencil manufacturer was well equipped in other respects, and a comparison between British and Austro-German products would show that where any difference existed in favour of the foreign production it was primarily the finish due to colour.

During the period of the war United Kingdom production of pencils was intensified in an endeavour to meet the increased demand. New companies commenced to manufacture, and established manufacturers installed additional plant, realising a considerable increase in output.

This development continued subsequent to the termination of hostilities and reconstruction and amalgamation took place in the industry. A noteworthy event was the fusion of two important and old-established manufacturers whose combined resources, experience of manufacture and technical researchwork should tend to raise still further the standard of production in the United Kingdom.

In spite of the difficulties, which have been common to all industries, to re-establish trade in overseas markets, the export trade in lead pencils, which was almost entirely lost during the war, is being gradually regained, particularly in the Dominions and Crown Colonies.

COLOUR PRINTING.

THE origin of Colour Printing, although generally ascribed to the 15th century, probably had its origin—in common with many other crafts practised to-day—with the Romans, Cicero, in one of his early epistles, referring to a method whereby a number of portraits could be made for general distribution.

Lack of detail concerning this method of stamping or printing in colour, necessitates tracing the evolution of the craft from the earliest forms of colour printing in existence—certain crude attempts made by means of wooden blocks to imitate the elaborate “rubrication” used by mediæval scribes in the decoration of manuscripts.

In 1457, a Liturgical Psalter was printed on more ambitious lines in red and black throughout, with large decorative initials showing the addition of blue. Twenty-three years later witnesses the first example of English colour printing, the most notable example being a treatise on Heraldry, printed in as many as four colours—something of an achievement in those early days, and one, moreover, providing an exceptionally fine example of early work.

Failure to rival the remarkably rich hand-work characteristic of the period, led to the disuse of colour printing during the 16th and 17th centuries, but with the advent of the 18th century, colour printers at last threw off the shackles which had so long confined them within narrow bounds. Many of the processes of this period are continued on modified lines to the present day, notably the three-colour process, invented by J. Le Blon who, without the aid of the camera, employed methods fundamentally similar to those still in use.

Of all workers printing in colour from wood blocks, none achieved more lasting fame than George Baxter who, finding colour printing practically non-existent, left it flourishing. All workers found inspiration from the well-known “Baxtertypes” until the fifties, when wood block processes began to find a serious rival in chromo-lithography, invented by Senefelder, of Munich, in 1796, and introduced into this country some six years later.

Various attempts to establish lithography in England failed until the early twenties, when the commercial and artistic advantages of the process were recognised and practised on a small scale by several firms. In 1835 a firm of London colour printers, Jones by name, started using lithographic methods. This firm is also remarkable for the fact that they popularised printing in gold, using gold with the same facility as shown by other printers of the day in using black.

In 1854 machines were adapted to print from zinc as well as stone, which did much to simplify the work of lithographers of the period. An

idea of the difficulties with which they had hitherto been confronted may be gained from the fact that “The Industrial Arts of the Nineteenth Century”—published in 1851-53—required no fewer than 1,069 stones, weighing twenty-five tons. An edition of 1,200 copies necessitated the taking of 1,300,000 separate impressions.

The progress of chromo-lithography is marked by photo-lithography—first utilised in 1860 for reprinting *The Domesday Book*—tri-chromatic lithography, which followed in 1889, and, nine years later, a further innovation introduced by a London colour printer, whereby zinc plates, chemically treated, could be printed litho fashion on an ordinary Wharfedale machine.

The three-colour process, as practised to-day, owes its being to the advent of photography. In 1861 the system began to proceed along definite lines, becoming sufficiently practicable with the development of the half-tone process for commercial work.

Progress in the art was aided by sensitometric tests. Early difficulties concerning the matter of screen angles were successfully overcome, while improvements on the part of dry plate makers led to the direct process, as distinguished from the slow and expensive indirect process first practised.

Impetus was given to the three colour process by means of closer attention in the matter of inks, improved machinery and, finally, by the introduction of the Offset method of printing, whereby half tones up to 200 lines may be printed with a delicacy and softness impossible to obtain by block printing.

The Offset process is rapidly becoming the most important factor in the development of colour printing. Clearness, softness, and accurate reproduction are characteristic of this process, which brings out to the full the sympathy of the subject. Carried out on rough paper it guarantees the reproduction of light and shade in all its delicate gradations, in a manner impossible to obtain on the highly-coated paper employed in ordinary methods.

These facts have been realised to the full by English colour printers who are, perhaps, better equipped than those of any other country to deal with this important branch of their craft.

Nowhere are the strides in colour printing more apparent than in this country. Germany, although generally accepted as the home of printing, has much to develop where colour work is concerned. On all sides evidence is forthcoming that whereas in the past, other countries may have been more favourably situated to produce high-class work, English colour printers of the present day have little or nothing to fear, being fully prepared to meet foreign competition, and to beat it.

LETTERPRESS PRINTING.

By J. R. RIDDELL, Principal, St. Bride Foundation Printing School.

LETTERPRESS printing, the craft which turned the darkness of the Middle Ages into light and secured the intellectual achievements of the past, and also furnished a sure guarantee of the future, is the art of obtaining impressions from relief surfaces, such as type and engraved blocks.

It is claimed that the earliest attempts at printing were made in China before the Christian era. It is known that printing from engraved blocks and movable characters was practised in the Celestial Kingdom in the eleventh century, when a smith named Pi Shing made movable types, but the large number of characters in the Chinese alphabet made the invention practically useless. Books printed from blocks were published in China and Korea as early as 922, these are said to be still in existence. In the British Museum there is a copy of a Chinese Encyclopedia printed from movable types in the year 1397.

There is no actual certainty of the date of the invention of printing from movable types, but it is assumed it took place about 1449. Certain "Letters of Indulgence" are the first known documents to have been printed by this method. These were issued from a press at Mainz and bear the date 1454.

The first book printed in English was "The Recuyell of the Histories of Troye," partly printed at Bruges about 1478, by William Caxton, the first English printer, who set up his Press at Westminster in 1476.

The art of producing metal types is a very exacting one, calling for great accuracy and skill, not only in the designing of the letters and setting of the galleys, but also in the casting of the individual letter. The unit of type measurement is a "point," twelve of which equal "a pica em," or the sixth of an inch. The height of type is .918 in., or approximately the diameter of a shilling. "Points of type," which are of varying weights and sizes, are supplied to the printer in recognised proportions of characters, i.e., letters, signs, spaces, and are based on the number of "A's" in the font.

In the actual production of letterpress printing, there are two main operations, the setting up of the type by the compositor, and the printing of the type on the sheet of paper by the pressman, or machine manager.

COMPOSING.

In hand composition the compositor stands in front of a frame on which is placed a tray, called a "case," this is divided into a number of compartments or "bays," of varying sizes, each of which contains either a number of one particular letter of the alphabet, or punctuation marks, signs, figures, spaces, &c. These letters are picked up from the case by the compositor with the thumb and forefinger of the right hand and placed in a metal tool called a "composing stick" held in the left hand, and from which the letters, in the form of lines, are taken and placed upon a long shallow tray with flanges, called a "galley." The spaces, shaped like type but somewhat shorter, are placed between words. The lines of movable type are ultimately made up in a piece of a book of a particular size and placed inside a steel frame called a "chase," and the type "locked up," i.e., made portable by means of a system of wedges making the frame of type suitable for printing from on a machine.

Between the setting up of type and the actual printing, there are several important operations to be performed, such as reading—a most responsible task—the reader's position usually being held by a man of wide learning and practical experience. There are also the making and reading of the reader's and author's "correctors," and finally the arranging or "imposing" of the pages in such a way that when the sheet is printed on both sides and folded, the pages will fall in proper sequence and with correct margins.

After the number of copies required have been printed, the type is "distributed"—i.e., each letter or space is put back into its respective box by the compositor so that the type may be used over again. In this work great care has to be exercised to prevent the letters getting into the wrong bays, or, as the printer would say, "picking" the case.

We live in a mechanical age, and mechanical science has made great advances in connection with Printing during the past 50 years. In setting up "solid matter," such as newspapers and books, composing machines are used to a large extent. Of these there are various styles which can be divided into two classes, those which cast a solid line of type, called a "slug," and those which produce, as in hand composition, a line made up of separate letters.

The compositor on the composing machine is called an "operator." He manipulates a keyboard similar in

appearance to that of a typewriter, the keys of which when depressed set certain mechanism into operation, ultimately producing lines of type spaced and ready for printing, either in solid lines, as with the Linotype or Intertype, or in single letters as produced by the Monotype.

MACHINE PRINTING.

When the forme of type and illustrations has been sent to press, a large amount of work and skill is demanded of the pressman or machine manager, before the results are obtained which enable even a novice to recognise that the book or the piece of printed matter he is handling is an example of good craftsmanship. There is an indefinable charm about a well printed page. Hours, and sometimes days, of what is called "making ready" may be spent on the machine to produce an even, clear, solid and sharp impression from the forme. Particularly is this the case when printing illustrations—the printer has to adjust the weight of pressure to suit the different tones in the plate, so that the "tone-values" of the original design will be retained throughout the printing of a large edition. This is done by cutting out on sheets which enter the parts which print too heavily, and catching up those which require to print solidly, by the use of papers of varying thicknesses and pasting them together, forming what is called an "overlay." This is fixed on the platen or cylinder of the machine in such a way that it corresponds exactly with the forme when the impression is made. This work requires a high order of intelligence, skill and much experience.

When the make ready is completed, the machine is "set" to suit the job. Ink suitable for the work is placed in an adjustable trough, called a "dust" which is regulated by means of screws so that an even and sufficient supply of ink is automatically maintained and carried to the forme by means of a system of rollers throughout the run of the job, which may last for a day or even for weeks. On an average some thing like 9,000 sheets of a school book will be printed in a day, but during their printing, great care has to be exercised and a sharp look-out kept for letters breaking off or for something (such as a space between words which should not print) "working up" and spoiling the appearance of the work.

There are many kinds of printing machines, too numerous to mention, varying from those which give a flat impression, such as the hand press and platen machines, to the large cylinders and rotaries which produce books and daily newspapers. The various styles of machines are capable of printing anything from a few hundred up to about 200,000 copies per hour.

BLOCK MAKING.

A reference as to how illustrations are obtained may not be considered out of place in this "tabloid article." The artist's drawing, photograph, or design is photographed by a particular process (sometimes through a screen representing a number of minute dots which can be seen if a print from a half-tone block is closely examined). The process-negative is then photographically printed on to a sensitised piece of metal, which, when developed is subjected to the action of certain acids, which etch, or eat away, the metal not protected by the photographic image. After varying degrees of etching, the image is left standing in relief, providing a surface from which the letterpress printer can print. These relief blocks, when mounted on wood to bring them to type height, are placed in a forme and printed at the same time as the type.

Blocks for printing in colours are made very much in the same way, but instead of employing one negative, there are three, each representative of one of the fundamental colours scientifically dissected, and from these negatives, blocks are made. Each block is printed in a different one of the three primary colours—yellow, red and blue—and when the colours are printed on top of each other, a reproduction of the colour tones approximating those in the original painting is obtained.

Printing is acknowledged to be one of the most important of our national industries. It is estimated that some 8,000 firms in the United Kingdom have invested over £30,000,000 in the business which gives employment to some 300,000 workers. Further, it is the art which has educated the world, and as a career for young men of intelligence it provides considerable scope for future development. There are great opportunities for men of education coupled with technical knowledge to become leaders who will influence the public to a fuller realisation of the commercial value of good printing, whether it be for newspapers, books or the larger and probably most important section—commercial or job printing.

THE TYPEWRITER.

THE thought of the typewriting machine long preceded the creation of the first practical typewriter. As long ago as 1714 a patent was granted to an Englishman named Henry Mill for a design embodying the idea and the principle of a typewriting instrument, and although the specification of this invention gave no mechanical details as to the construction of its component parts, from the invention itself, crude as it was, has evolved in successive stages the typewriter of every variation in use to-day; thus, and in the indicated sense, its manufacture, wherever conducted, is an industry of British origin.

No efforts to improve on Henry Mill's primitive attempt seem to have been made till 1784, but from that year onwards numerous experiments for the construction of a more practical machine are on record. The most notable achievements were the following.

In 1840 two British inventors, Bain and Wright, patented a typewriter-telegraph, in which the vital principle of the typebar circle was first used. In 1843 an American, Thurber, constructed the first machine embodying the step-by-step lateral movement of the paper-platen. In 1867, the *Scientific American* described a writing machine recently invented by John Pratt, an American living at Camden Town (London), and this description arrested the attention of two American printers, Sholes and Soule, who were busy with the invention of a machine for serially numbering book pages. From it they got the idea of extending the scope of their own apparatus so as to cover the alphabet, as well as the figure range. For six years Sholes persevered, and eventually succeeded in making a model good enough to interest a well-known firm of gun makers in its commercial possibilities. In 1874, the first imperfect but capable machines were marketed. That was the beginning of the typewriter industry proper. It was not, however, until after 1880 that its success was assured. The world's annual output of typewriters was a few years ago roughly estimated at 500,000; the United States, with its population of nearly 100,000,000, absorbing about 250,000. Later Board of Trade returns than those for 1920 are not available at time of writing; the number of typewriting machines imported into Great Britain in that year was over 80,000, more than 25,000 above the number in 1919. Since 1914 importations have nearly or quite doubled. The multifarious work and changed conditions caused by the war created an enormous demand for typewriters. All managers were confronted with a large amount of clerical labour, with a sadly depleted and often inexperienced staff to do it. Many resorted to typewriters who ought to have used them before, and were willing to pay double pre-war prices. In 1917 (till the end of 1918) importation of typewriters was prohibited, and demand forced up the value of second-hand re-built machines to fancy prices. In addition to the typewriter, every device that would save time, labour and expense was tried; consequently British offices are better equipped than ever they were, though even yet it is far from fully realised to what an extent mechanism can replace or expedite clerical work. Hitherto the manufacture of typewriters in England has not been on the scale that it should have reached, but two or three new manufacturing have been

established since the restoration of peace. As a result of the war, the British public are awake at last to the necessity of supporting home manufactures. Probably the high cost of typing machines has prevented their use in larger numbers. The great American concerns run their businesses in such a costly manner that about 50 per cent. of the price has to be set aside for selling expenses. The high prices thus charged are therefore out of all proportion to the manufacturing cost; one of the largest corporations altered its methods, and brought out a machine at half the price of its standard one, which course is stated to have yielded satisfactory results. This shows that a good machine can be produced at a popular price, and encourages a much larger output of home-made machines. Manufacturers generally, whatever the commodity they manufacture, are culled on to produce more after the war than they did before. If this can be done by working at harder pressure for a shortened day, so much the better, especially from a national health standpoint, but it can only thus be done by the increased use of mechanical facilities. As a labour-saving instrument, which lessens fatigue and eye-strain, the modern typewriter should be regarded as indispensable in every well-found office. At first it was difficult to sell, because the enormous value of the legibility, uniformity and speed of its work was not recognised. To-day these points are appreciated. Even now, however, the demand for the typewriter has not nearly reached its limits. In their own interests many more people ought to use it, and many business firms ought to use more machines. The typewriter has, comparatively recently, been developed in a new direction, mechanism having been adapted to it which makes it an adding and subtracting machine, while it remains also a writing machine.

Further, typewriters equipped with a plain type carrier for general correspondence can also be fitted with separate type carriers for the language of any nationality (or for medical, astronomical, or other technical symbols), the change being effected in a few seconds. An even newer feature is the provision of perforating type, the use of which in making out cheques, policies, dividend warrants, etc. (without change of machine), is a protection from subsequent tampering.

There are about ninety different kinds of typewriters made in the world, the preponderant production of America being supplemented by that of France, Italy, and Germany; as well as by the still small but increasing production of our own country.

"Made in England" should be the hall-mark demanded by every patriotic purchaser. In this connection a word of caution is called for. The market is not free from typewriters spuriously described as British that are in reality of German or other foreign manufacture. From these the genuine product of British manufacture is differentiated by its indisputable superiority. Up to recent days, out of every 100 machines made at home 95 have been exported. We can never, of course, export too many, but the sooner we import far fewer the better—and more creditable—in every way. The British typewriter being what it is there is no reason why we should have to import any.

IMPERIAL

BRITISH-MADE

IMPERIAL TYPEWRITER

Model
D

BRITISH,
RIGHT
THROUGH

The IMPERIAL is a Standard Typewriter, completely equipped for all commercial purposes, of high speed, and absolute reliability. It embodies in a compact form all the best features of the heavier and more expensive typewriters:—Visible writing, Two-colour Ribbon, Back Spacer, Variable Line Spacing, Speedy Escapement, Light Touch, and it has the unique advantage of instantly INTERCHANGEABLE TYPE AND KEYBOARD, so that you can write in any language. There are also facilities for Dead Keys for accents, and special keyboards for Engineers, Architects, Builders, Chemists, &c., arranged for most languages. A feature for modern business is the new Pin-point Type Unit which perforates the paper and forces the ink of the ribbon right through, thereby rendering the written matter absolutely indelible. The value of this feature will be immediately apparent for Insurance Policy, Dividend Warrant, and Cheque-writing.

PAPER TRADE INDUSTRY.

By H. P. STEVENS, M.A., F.I.C.

RAW MATERIALS.—The raw materials used in the British Isles for the manufacture of paper consist of (1) vegetable fibres, derived chiefly from wood, esparto, rags and straw; recently even sawdust has been utilised; (2) soda, lime and bleaching powder for the purification of the fibres; (3) resin, glue, gelatine and starch for sizing and giving a finish to the paper; (4) loading materials such as china clay, chalk, gypsum, etc., to cheapen and render the paper opaque; (5) colours such as ultramarine, coal-tar dyes, the former being used chiefly to counteract the natural yellow tinge in the manufacture of white papers, and (6) waste papers. The manufacture of paper also requires coal for steam raising and a very ample supply of good water.

Rags, which once supplied the bulk of the paper-makers' raw material, are now used for high-grade papers only, and Great Britain is dependent on its Colonies and on foreign countries for the supply of the great bulk of vegetable fibres. Of these wood pulp is the most important. In normal times this comprises four-fifths of the amount of our imports of fibrous materials.

Wood pulp is of two varieties—"mechanical" wood pulp and "chemical" wood pulp. The former predominates and consists of wood ground to pulp in a stream of water, the latter consists of wood disintegrated by chemical processes and fetches two or three times as much as the mechanical pulp. The wood used is mostly coniferous (spruce fir) and therefore derived from countries with temperate or cold climates. Norway and Sweden supplied the bulk of our requirements; next in importance were Russia (Finland), Canada, Newfoundland and Germany. The cutting off of supplies from the last-named country has not appreciably affected the position, and until the restrictive measures came into operation, the British imports of wood pulp had increased rather than diminished. There are ample reserves of wood in Canada and Newfoundland to supply all British requirements.

Esparto is imported in the raw state and converted into pulp in English mills. It is mostly derived from Algeria, the remainder from Spain and parts of the North Coast of Africa. Imports have shown a considerable increase, but even at the end of 1920 had not regained pre-war figures.

Rags are largely imported. The present figures show a further increase both in weight and value.

The following figures give the imports of fibrous raw materials for the three years 1918, 1919 and 1920:—

Description	1918 Tons	1919 Tons	1920 Tons
Mechanical Wood Pulp ..	182,007	228,022	538,989
Chemical Wood Pulp ..	237,333	499,898	575,204
Esparto	18,730	70,124	162,539
Rags	115	6,325	12,408
Other Materials	354	1,242	6,692
Totals	488,781	1,016,711	1,278,892

IMPORTS AND EXPORTS OF PAPER.—For our purpose the term "paper" must be held to include not only printing, writing and wrapping papers, but also paste board, cardboard, mill board, straw boards, and many specialities.

As regards imports Norway and Sweden supply us with the greater part of the cheaper kinds, such as news and wrapping papers, while Germany's exports of paper to this country were of equal importance, for, although cheap printings, such as newspaper, did not bulk so largely, this was neutralised by the larger quantities of almost every other type.

During 1920 both imports and exports show large increases both in quantity and value.

Figures for 1921 are not yet available.

The following figures give the quantity and value of

the British imports of paper and boards during the last three years:—

1918	1919	1920	1918	1919	1920
Tons	Tons	Tons	£	£	£
104,000	381,076	647,263	5,131,810	13,019,708	30,252,181

Over one quarter of these quantities is accounted for by strawboards manufactured in countries where straw is plentiful. The feature of the 1920 imports is the large increase in all varieties. Great Britain is estimated to produce about 11 per cent of the world's output of paper and Canada 3 per cent. The United States is by far the largest producer, manufacturing over one-third, and was followed in order by Germany, England, France, Austria, Canada, Italy, Russia, Finland, etc. The British exports of paper for the last three years are given in the following table:—

1918	1919	1920	1918	1919	1920
Tons	Tons	Tons	£	£	£
28,144	46,780	117,622	3,163,995	4,223,933	12,517,859

MANUFACTURE OF PAPER IN THE BRITISH ISLES.—There are 231 paper and cardboard mills in England, sixty-one in Scotland and seven in Ireland. Wood pulp is only manufactured at two mills. There are thirty-seven paper mills in Canada and a large number of wood pulp mills. Some Canadian mills combine the manufacture of both wood pulp and paper. In Newfoundland there are two large establishments, one producing wood pulp and paper and the other wood pulp only. There are seven paper mills in Australia, three in New Zealand and eight in India. Official statistics of the paper output in Great Britain and Ireland were furnished in 1907 for the Census of Production:—

Paper:—	United Kingdom. Quantity.	Value.
Paper for Writing and Drawing and for Envelopes ..	124,250	3,065,000
Paper for Printing and for Posters, etc.	436,050	5,590,000
Packing and Wrapping Paper, Biscuits, etc. ..	151,850	1,942,000
Printing and Coloured Papers (not Handing) ..	31,050	846,000
Pasteboard, Cardboard and Millboard ..	44,500	565,000
Other Sorts ..	28,200	700,000
Paper Bags ..	35,500	487,000
	881,500	
All other Products—Recorded by Value only	112,000
Total Value	13,329,000

1920	1918	1919	1920
Tons	£	£	£
538,989	3,593,842	4,918,700	8,168,704
575,204	9,138,893	10,484,237	21,360,535
162,539	358,457	946,184	3,179,042
12,408	3,891	188,741	428,062
6,692	6,778	28,659	139,757
1,278,892	13,099,931	16,566,503	33,278,000

A more recent but unofficial estimate has been kindly supplied me by the Paper Makers' Association. The following figures give the annual pre-war production of paper manufactured in the British Isles:—

	Tons.
News, all grades	377,000
Printing and Writing Paper from Wood Pulp ..	254,800
Printing, mostly from Grass (Esparto) ..	148,900
Brown Papers and Specialities	228,800
Best Writings and Blottings, mostly from Rags	20,800
	1,029,800
Mill Boards, Leather Boards, etc.	63,400
Total quantity	1,093,200

OR TO THE MANAGERS—

ALFRED HOLT & CO.,
INDIA BUILDINGS, WATER STREET, LIVERPOOL

Owing to want of space it has been found necessary to omit some of the statistics and particulars previously included in this article.

In the early part of the 18th century numerous inventors propounded schemes for applying steam power to vessels to be run upon rivers and canals. A chronological list from 1707 to 1858 is given below.

For the establishment of lines from 1861 to 1888 and for further information see WHITAKER'S ALMANACK, 1913 edition, including the Evolution of the Steamship in the North Atlantic.

In 1824 ocean trade was then carried on with sailing ships, mostly under 500 tons each, and all the steamboats in the United Kingdom only numbered 109.

As the size of steamships increased the heavy cost of construction necessitated the establishment of Corporations, with great strength of capital, which control the principal ocean routes (see page 959).

FIRST STEAMBOATS, PIONEER SAILINGS AND EARLIEST LINES.

1707. Denis Papin experimented on River Fulda with paddle-wheel steamboat.

1736. Jonathan Hulls patented designs similar to modern paddle boat.

1769. James Watt invented a double-acting side-lever engine.

1783. Marquess of Jouffrey made experiments in France.

1785. James Ramsey, in America, propelled a boat with steam through a stern-pipe.

1785. Robert Fitch, in America, propelled a boat with canoe-paddles fixed to a moving beam.

1787. Robert Miller, of Edinburgh, tried primitive manual machinery.

1788. Miller, with Symington, produced a double-hull stern-wheel steamboat.

1802. *Charlotte Dundas*, the first practical steam tugboat, designed by Symington.

1804. *Phoenix*, screw-boat designed by Stephens in New York; first steamer to make a sea voyage.

1807. *Clermont*, first passenger steamer continuously employed; built by Fulton in U.S.A.

1812. *Comet*, first passenger steamer continuously employed in Europe; built by Miller in Scotland.

1818. *Rob Roy*, first sea-trading steamer in the world; built at Glasgow.

1819. *Savannah*, first auxiliary steamer, paddle wheels, to cross the Atlantic; built in New York.

1821. *Aaron Manby*, first steamer (English canal boat) built of iron.

1823. City of Dublin Steam Packet Co. was established.

1824. General Steam Navigation Co. was established at London.

1824. George Thompson & Co. (Aberdeen Line) were established.

1825. *Enterprise* made the first steam passage to India.

1825. *William Fawcett*, pioneer steamer of the P. & O. S.N. Co.

1830. T. & J. Harrison (Harrison Line) were established at Liverpool.

1832. *Ellurkah*, iron steamer, took a private exploring party up the Niger.

1834. Lloyd's Register for British and Foreign Shipping established.

1836. F. Green & Co. established at London.

1836. Austrian Lloyd Steam Navigation Co. established at Trieste.

In 1814, the steamboats of all kinds registered in the United Kingdom amounted to less than 1,000 tons, increased to nearly 8,000 tons by 1820. There were 766 British steamers afloat in 1838, in all just short of 150,000 tons. The invaluable Register Book which is published by the Committee of Lloyd's Register of British and Foreign Shipping shows that on June 30, 1921, the steamship empire builders of Great Britain owned 10,324 vessels, 21,588,606 gross tons, exclusive of 1,109 ships (482,192 tons) belonging to the dwindling disciples of time-honoured canvas. The total for the world was—Steam, 58,846,325 tons; and sail, 3,128,328 tons.

Owing to recent inventions passengers enjoy greater immunity from accidents, the majority of passenger steamers being now fitted with installation of wireless telegraphy and with submarine signalling apparatus.

1837. *Francis B. Ogden*, first successful screw tugboat; fitted with Ericsson's propeller.

1838. *Archimedes*, made the Dover-Calais passage under two hours, fitted with Smith's propeller.

1838. R. F. Stockton, built for a tugboat, fitted with Ericsson's propeller, sailed to America; first iron vessel to cross the Atlantic; first screw steamer used in America.

1839. *Thames*, pioneer steamer of the Royal Mail Steam Packet Co.

1839. George Smith & Sons (City Line) were established at Glasgow.

1840. *Britannia*, pioneer steamer of the Cunard Line.

1840. *Chile*, pioneer steamer of the Pacific Steam Navigation Co.

1845. *Great Britain*, first iron screw steamer, precursor of modern Atlantic steamer.

1845. Thos. Wilson, Sons & Co., Ltd. (Wilson Line) established at Hull.

1847. Pacific Mail Steamship Co. established in America.

1849. Houlder Brothers & Co. established at London.

1850. Bullard, King & Co. (Natal Line) established at London.

1850. Messageries Maritimes de France established.

1850. Inman (now American) Line, established at Liverpool.

1851. *Tiber*, first steamer of the Bibby Line, established 1821 at Liverpool.

1852. *Forerunner*, pioneer steamer of the African Steamship Co.

1853. Union Steamship Co. was established (now Union-Castle Line).

1853. *Borussia*, first steamer of the Hamburg-American Packet Co., established 1847.

1854. *Canadian*, first steamer of the Allan Line, established 1820.

1854. Donaldson Bros. established at Glasgow.

1855. British India Steam Navigation Co. was established.

1856. *Tempest*, first steamer Anchor Line.

1857. *Waldensian*, first steamer of J. T. Rennie, Son & Co. (Aberdeen Line).

1858. *Bremen*, first Atlantic steamer of the Norddeutscher Lloyd, established 1856.

1858. *Great Eastern* launched into the Thames, Jan. 31; commenced, May 1, 1854.

1858. British and African Steam Navigation Co., Ltd., established at Liverpool.

LARGEST STEAMERS FITTED WITH REFRIGERATING APPLIANCES.

Princessa, 473,689 cubic feet; *Baronesa*, 473,481 cubic feet; *Duquesa*, 470,157 cubic feet (Furness Houlder Argentine Lines); *Northumberland*, 466,000 cubic feet (Federal S. Nav. Co.); *Armagh*, 466,000 cubic feet (Union S.S. Co. of N. Zealand); *Marquesa*, 464,622 cubic feet (Furness Houlder Argentine Lines); *Cornwall*, 460,000 cubic feet (Hasham Foundry & Eng. Co., Ltd.); *Canonesa*, 456,576 cubic feet (Furness Houlder Argentine Lines); *Nariva*, 447,000 cubic feet; *Natia*, 447,000 cubic feet (R.M.S.P. Meat Transports, Ltd.). There were on June 30, 1921, 826 vessels fitted with refrigerating apparatus; of these, 109 had each insulated chambers, with a capacity of not less than 300,000 cubic feet; 36 had each not less than 250,000 cubic feet; and 160 had each not less than 80,000 cubic feet.

LARGEST STEAMERS FITTED FOR LIQUID FUEL.

Olympic, 45,439 tons (White Star); *Aquitania*, 45,647 tons (Cunard); *Minnesota*, 20,602 tons (Atlantic Trans. Co. of W. Virginia); *Transylvania*, 17,250 tons (Anchor); *Doris*, 16,600 tons (White Star); *Pittsburg*, 16,600 tons (International Navigation Co.); *Tyrrhenia*, 16,000 tons (Cunard); *Empress of Britain*, 15,857 tons (Canadian Pac. Rly. Co.); *Conte Rosso*, 15,500 tons (Lloyd Sabaud). There were on June 30, 1921, 2536 vessels fitted for liquid fuel, of which 1,445 were over 5,000 tons, and 144 under 1,000 tons each. Those with a gross tonnage exceeding 15,500 tons each are given above.

Carriage of Petroleum in Bulk.—863 steamers and 105 sailing ships were engaged in carrying petroleum in bulk; the largest of these not fitted for liquid fuel were the *San Felix*, 13,055 tons; *San Gaspar*, 12,700 tons (Eagle Oil Transport Co. Ltd.); *J. A. Moffet*, 10,800 tons (Standard Oil Co. of New Jersey).

FASTEST OCEAN-GOING STEAMERS IN THE WORLD NOT UNDER 20 KNOTS.

In order of Speed.—Mauretania, Aquitania, France, Olympic, Oranje Nassau, Prinses Juliana, Wahine, Paris, Berengaria, Von Steuben, Empress of Asia, Empress of Russia, La Lorraine, La Savoie, Princess Patricia, Leviathan, Agamemnon, Mount Vernon, Empress of France, Ausonia, Esperia, Maori, Loongana, Prins Hendrik, Lutetia, Massilia, Charles Roux, San Giusto.

FASTEST SHORT-TRIP STEAMERS.

In order of Speed.—Paris, Anglia, Hibernia, Jan Breydel, Pieter de Coninck, Princesse Elisabeth, Stad Antwerpen, Ville de Liège, Newhaven, Rouen, Munster, Ulster, Viking, Dieppe, St. Andrew, St. David, St. Patrick, St. George, Biarritz, Mald of Orleans, Princess Clementine, Manxman, Brighton, Mona's Isle, Snaefell, all not under 22 knots.

LARGEST STEAMERS IN THE WORLD.

In order of Size.—Majestic, Leviathan, Berengaria, Olympic, Aquitania, Columbus, Paris, Mauretania, George Washington, Caracciolo, Kaiserin Auguste Victoria, Belgic, Adriatic, Rotterdam, Baltic, France, Amerika, Empress of Canada, Duilio, Giulio Cesare, Tirpitz, Cedric, Celtic, Minnesota, Cap Polonio, Brabantia, Limburgia, Caronia, Arundel Castle, Windsor Castle, Carmania, Scythia, Agamemnon, Laconia, Lapland, Samaria, Empress of France, Ceramic, Mount Vernon, President Grant, München, Arabic, Minnekahda, Transylvania, Nieuw Amsterdam, Prinz Friedrich Wilhelm, Empress of Asia, Empress of Russia, Hansa, Doric, Pittsburgh, Regina, Montrose, Narkunda, Cameronia, Tyrrhenia, Empress of Britain, Naldora, King Alexander, Andes, Almanzora, Mongolia, Count Rosso, all 15,500 tons and above.

LARGEST SAILING-SHIP OWNERS IN THE WORLD.

Owners.	Ships.	Tonnage. Gross tons.	Belonging to	Name of Largest Ship.	Ton- nage.	Remarks.
East Asiatic Co.	20*	105,000	Copenhagen.....	Afrika	8,597	Own 6 Steamers.

You'll find it in "Whitaker."

*Every "well found" Passenger Ship
carries a Library.*

"It is a commonplace to say that no reference library is complete without "Whitaker." One can go much further and remark that a great many people find the Almanack a reference library in itself. There is nothing to equal it, either in conception or in the completeness and care with which it is put together and kept up-to-date.—*The Times*.

"Whitaker" is a Library in itself.

London:

J. WHITAKER & SONS, LTD., 12, Warwick Lane, E.C.4.

PUBLIC SCHOOLS' SCHOLARSHIPS.

KING'S SCHOOL, CANTERBURY.

Scholarships are offered for competition twice annually, in June and November. A King's Scholarship is tenable with an Entrance Scholarship, so that a boy may at entrance win scholarships to the value of £55 15s. a year for five years. Full information from HEADMASTER, KING'S SCHOOL, CANTERBURY.

DOVER COLLEGE.

Three Entrance Scholarships for Boarders are awarded in July and November, value £40, £30, and £20, one of each. The Common Entrance Examination is used as a Preliminary Test and selected Candidates are asked to do higher papers. The examination can be taken at the Preparatory School.

MALVERN COLLEGE.

Entrance Scholarship Examination early in June. One or two £99, Five of £62, and Five of £42 per annum. Exhibitions, value £12 to £25 per annum, may be awarded boys who do well but fail to obtain scholarships. Apply to THE BURSAR, THE COLLEGE, MALVERN.

SEDBERGH SCHOOL.

Entrance Scholarship Examination in May or June in London and Sedburgh. Ten Scholarships (£100 to £40) are offered. House Exhibitions may be awarded to deserving candidates. Other Exhibitions are offered for entry in January term. Apply to the BURSAR, SEDBERGH SCHOOL, YORKS.

BLUNDELL'S SCHOOL, TIVERTON.

Six Foundation Scholarships, including two Entrance Scholarships of £60 a year, will be offered for competition on May 31st and two following days. Candidates must be between 13 and 14 years of age on May 1st. Particulars can be obtained from the Headmaster.

UPPINGHAM.

An Examination will be held in May or June, 1922, for about Eight Open Scholarships, varying from £85 to £30 per annum. Special Scholarships and Grants are available for Sons of Officers killed in the War. Allowance is made for age, but a candidate must be under 14 on May 1st, 1922. Apply to THE HEADMASTER, UPPINGHAM.

KING'S COLLEGE SCHOOL, WIMBLEDON COMMON, S.W.

An examination is held each Summer Term. Candidates for Senior Scholarships must be under 16, and for Junior Scholarships under 14, on May 1st. The value of the Scholarships depends upon the Standard attained, but will never exceed the amount of Tuition Fees (£39 per annum). See "Public Schools' Year Book."

ST. PETER'S SCHOOL, YORK.

An Examination for Scholarships and Exhibitions varying from £50 to £15 will be held in July, 1922. General knowledge is required in preference to specialisation in one subject. Exhibitions also awarded. Two reserved for sons of Officers and Clergymen. Further details from S. M. TOYNE, M.A., F.R.Hist.S., HEADMASTER.

CHILLON COLLEGE

EDUCATION.**MESSRS. GABBITAS, THRING & CO.,****36, Sackville Street, Piccadilly, W.,** Tel. 4926
Regent.

have a department specially organised for advising Parents and Guardians as to the best Educational Establishments for Boys and Girls in the United Kingdom or on the Continent. The Firm have had experience as Educational Agents for nearly fifty years, and during their long career have been instrumental in sending Masters and Tutors to the leading Schools and Tutors' Establishments, and are in the closest touch with all educational matters. They can give, FREE OF CHARGE, to the Parent or Guardian information and advice as to—

**SCHOOLS FOR BOYS OR GIRLS. TUTORS'
ESTABLISHMENTS. EDUCATIONAL HOMES.
DOMESTIC ECONOMY, AGRICULTURAL, AND
SECRETARIAL COLLEGES.**

**EITHER AT HOME
OR
ABROAD.**

To enable the Firm to advise efficiently it is necessary that *full particulars should be given*; especially as to the age of the Pupil, previous education, and present standard of attainments, special subjects of study, locality, whether a large or small establishment is preferred, and the fees it is intended to pay.

The Firm also can assist in procuring the services of Private Tutors and Governesses, Resident, Travelling, Non-Resident, or Visiting, of whom they always have a large number on their Lists.

Transfers of and Partnerships in Boys' and Girls' Schools are also negotiated. Masters, Tutors, and Governesses seeking Posts can have a Prospectus on application, free of charge.

ST. LEONARDS-ON-SEA.**ST. PAUL'S HOUSE,****UPPER MAZE HILL,**

(Telephone, Hastings 560.)

Delicate, backward, and exceptional pupils received; developed and educated by expert treatment. The aim of the Principal is to specialise with those whose education and training have been retarded from delicacy, nervous, or other trouble. Speech, hand, and eye training. Remedial physical culture, dancing, drill, in addition to all ordinary Subjects. Particular attention given to diets as prescribed by Specialists. Beautiful locality near sea and country.

*Prospectus and particulars from Principal.***FOR BOYS AND GIRLS—continued. PAGE**

WHITAKER'S LIST OF SCHOOLS AND CLIMATES

THE EDUCATIONAL SECTION TO WHITAKER'S ALMANACK

In the selection of a SCHOOL the locality to meet individual requirements is often of primary importance, and Educational facilities must generally be considered when deciding upon a place of residence.

A decision is difficult where so many districts in England, Scotland and Wales have evenly balanced claims and diversity of advantages.

There are many districts which contain a number of excellent PRIVATE COLLEGES AND SCHOOLS which flourish under favourable local conditions; but isolated efforts of individuals to draw attention to their special advantages are disappointing.

In Whitaker's List of Schools and Climates the information, wherever possible, is obtained from the Medical Officer of Health.

Whitaker's List of Schools and Climates affords Anglo-Indians, Canadians, Australians, Colonials, and Foreigners in want of a School in the United Kingdom a preliminary Guide which contains the most reliable information in the smallest compass.

METROPOLITAN SECTION.

BLACKHEATH, S.E.

The Medical Officer of Health writes:—"Blackheath is a fine healthy and invigorating district, enhanced by the proximity of Greenwich Park and the Royal Observatory situated therein."

BOYS. CHRIST'S COLLEGE.

Principal - ARTHUR C. WIRE, B.A., F.R.G.S.

Assisted by Highly Qualified Staff.

Old-established, High-class Boarding School and Day School for Sons of Gentlemen.

Provides first-class education on Public School lines; prepares boys and students, English and Foreign, for Universities, Army, Navy.

Preliminary Professional Examinations, Commerce, &c.

College overlooks extensive heath; well equipped every way; 5 acres ground.

Chapel, Laboratory, Gymnasium, Carpenter's Shop, Sports, Magazine.

Entire charge of Foreign and Colonial Pupils.

Illustrated prospectus on application to the Principal.

CHARING CROSS

(London) has lowest death-rate of all the great capitals; its general healthiness compares favourably with England and Wales; residential advantages are relative evenness and mildness.

CHARING CROSS HOSPITAL MEDICAL SCHOOL

(UNIVERSITY OF LONDON).

OPEN TO MEN AND WOMEN STUDENTS
ON EQUAL TERMS.

The most central of all the University Schools, immediately accessible by Train, Tram, Tube, and 'Bus.

Courses of Study arranged to meet the requirements of all the Examining Bodies.

Low Inclusive Fees.

For Prospectus and full information apply personally or by letter to the Dean—

W. J. FENTON, M.D., F.R.C.P.,

Charing Cross Hospital Medical School,
London, W.C. 2.

ST. GEORGE'S COLLEGE, Red Lion Square, W.C. 1.

Previously known as—

THE CIVIL SERVICE DEPARTMENT OF KING'S COLLEGE, LONDON.

Principal - - - Mr. W. BRAGINTON, M.A.

Girls' Classes under Miss Braginton, M.A., for Civil Service and Business. A link between the Schools and the Civil Service or Army. Day, Evening, and Correspondence Classes. Has the largest number of successes in the great Home Civil Service Examinations.

For Prospectus and List of Successes, address—

MR. W. BRAGINTON, M.A., ST. GEORGE'S COLLEGE, KINGSWAY, W.C. 1.

CLISSOLD PARK AND DISTRICT, N.

The Medical Officer of Health writes:—"Clissold Park occupies an elevated healthy position, with parks and open spaces, contributing to make it a first-class residential neighbourhood."

BOYS.

(Established 1876.)

MODERN SCHOOL

Headmaster - A. W. WRIGHT, B.A., LL.B.

Thorough education for Professions and Commerce. Entire charge.

Curriculum.—Modern Languages (conversational), Mathematics, Science (laboratory), and Advanced Drawing. Commercial Courses. French or Spanish Pupils received. Entire charge if desired.

Physical Development.—Football, Cricket, Fives, Swimming, Drill and Gymnastics (Gymnasium), Boxing, Natural History and Debating Societies. Domestic arrangements under personal supervision of Mrs. M. A. HILL, to whom communications should be addressed.

CROUCH HILL, N.

(Middlesex) occupies an elevated position on a range of hills which stretch northward towards Highgate and Barnet. The locality enjoys a fine record for salubrity, officially mentioned as one of the Health Resorts within the County of London

BOYS. **OAKFIELD SCHOOL**

Headmaster—

W. T. A. EMTAGE, M.A. (Oxon.).

Double First Class Honours in Mathematics and Science.

Late Director of Education in Mauritius.

Premises.—Old Tudor Mansion in 3 acres of ground. Playing Field.

The School Course aims at laying the foundation of a general liberal education in Languages, Literature, Mathematics, and Science, but considerable time is devoted to modern subjects.

Special Business Training Course.

Entire charge where parents are abroad.
Fees.—100 to 120 guineas per annum.

HENDON, N.W.

(Middlesex). The Medical Officer of Health writes:—"Subsoil mainly clay with pockets of gravel. Elevation varies from 463 to 200 feet. Fresh, open district, including much undeveloped land. Climate dry and mild. Pleasant, healthy, residential district. Population 56,015.

BOYS. **TENTERDEN HALL**

PREPARATORY (7-15) FOR PUBLIC SCHOOLS
• AND ROYAL NAVY.

Principal - A. J. M. BACON, B.A.

(Classical Honours, Selwyn College, Cambridge.)

Assisted by a competent Staff.

The School has been established 45 years, stands 300 feet above sea-level, in spacious grounds. Large Playing Fields.

Every encouragement given all branches of Athletics. Physical Drill and Gymnastics.

HONOR OAK, S.E.

London's remarkable health standard is due to excellent drainage, pure water, together with less exposure, greater warmth, and less humidity than outlying country. Honor Oak, a high-class residential quarter, 6 miles from London Bridge.

BOYS.

(Established 1686.)

ROYAL SAVOY SCHOOL.

Governors—

The Chancellor of the Duchy of Lancaster.

The Chaplain of the Chapel Royal, Savoy.

Warden—The Hon. Sir W. H. GOSCHEN.

Headmaster - COLIN M. H. CAMPBELL.

Premises.—Healthily situated in Colyton Road, within easy distance of all parts of London. 25 acres of grounds and playing fields.

The School is preparatory, and aims at giving a thoroughly sound education. Choral Scholarships are awarded. Cricket, Football, Hockey, Swimming, Rifle Range.

Boarding Fee.—£75 per annum.

Tuition Fee.—£24 per annum.

STREATHAM, S.W.

The Medical Officer of Health writes:—"Easily reached from London (8 miles), with all characteristics of a large, good class, healthy, residential suburb. The Common affords a grand elevated expanse of open ground.

GIRLS AND BOYS.

MOUNT VIEW,

Leigham Court Road, Streatham, S.W. 16.
DAY AND BOARDING SCHOOL FOR GIRLS
AND BOYS.

Headmistress - Mrs. BUNFORD.

Premises.—Detached, on high ground with lovely garden.

Preparation for Local and University Examinations. Special lessons in Riding, Painting, Singing, Dancing, and Eurythmics. Piano and Violin by arrangement. Preparatory School for boys (4-14) preparing for Public Schools and Osborne, under the direction of Mr. Bunford.

Entire charge where parents abroad.

Fees from £120 per annum.

WOODFORD, N.E.

The Medical Officer of Health writes:—"Woodford is a flourishing suburb within 7 miles of London. Epping Forest borders it on one extreme and Wanstead Park the other. Woodford is a high-class suburb." 9 miles from Liverpool Street (G.E.Ry.).

BOYS AND GIRLS.

FOREST HOUSE SCHOOL, HIGH ROAD, WOODFORD WELLS, ESSEX.

BOARDING AND DAY SCHOOL FOR
BOYS AND GIRLS.

Careful Teaching. Home Comforts. Excellent Diet. Preparation for Army, Navy, The Universities, and Commercial Life.

Entire charge of Foreign and Colonial Pupils.

Fees moderate and inclusive.

Headmaster - J. ARTHUR GATES.

PROVINCIAL SECTION.

ALTRINCHAM.

A town in Cheshire, on Bowden Downs, 8 miles S.W. of Manchester by rail, is situated on the Bridgewater Canal. Up-to-date system of drainage, and an unfailing supply of pure water. The chief employment is raising fruits and vegetables for the Manchester market. Population, 17,813.

BOYS.

Established 1879.

BARRINGTON.

BOYS PREPARATORY SCHOOL.

Headmaster - Rev. A. ALCOCK-BAILLIE, M.A.

BOYS PREPARED FOR PUBLIC SCHOOLS AND ROYAL NAVY.

Thorough grounding in all subjects. Careful grading. Mathematical subjects co-ordinated and taught with practical applications.

Special attention to formation of character and development of originality.

Games, Physical Drill, Swimming.

Mrs. Baillie personally looks after the boarders. Entire charge if required.

Fees.—25 to 30 guineas per term.

Prospectus, &c., on application.

BANSTEAD.

A healthy Surrey village with beautiful Downs, &c., 17 miles from London, 500 ft. above sea-level. Climate dry and bracing. Soil, porous—chalk and gravel. Excellent public water supply, softened. Prevailing winds, S.W. Low death-rate.

GIRLS.

ST. MARGARET'S

SCHOOL.

THE LARCHES.

Principal—

Miss A. C. MOLYNEUX, L.C.P.

PROSPECTUS AND REFERENCES ON APPLICATION.

ASHFORD

(Kent). The Medical Officer of Health writes:—A market town with large cattle market, situated in East Kent, on River Stour, 14 miles S.W. of Canterbury and 54 miles from London, S.E. & C. Railway. About 200 feet above sea-level. The subsoil consists of the greensand. The climate is bracing. Drainage modern, water supply pure and constant. Open-air swimming bath. General and Zymotic death rates low. Golf, 19 holes. Pop. 14,355.

GIRLS.

FAIRVIEW.

Principal - Miss BAILEY, L.L.A.

(Assisted by certificated English and Foreign Governesses and Visiting Professors).

Receives a limited number of pupils for thorough instruction in the usual branches of a High-class Modern Education. Individual Care. Home Comforts. Every effort made to secure religious, mental, and physical well-being of the girls.

Entire charge taken.

Swedish Drill, Hockey, Cricket, Tennis, Riding, Cycling.

Fees Moderate and inclusive.

GIRLS. HIGH SCHOOL FOR GIRLS.

Principals { Mrs. EDWARDS, B.A. (Lond.).
Miss BRAKE, A.C.P., O.H.L.
Recognised by the Board of Education as an Efficient Private Secondary School.

Buildings.—Spacious Tudor Residences. Modern sanitation. Charming old world gardens. Lawns and playing fields 10 acres in extent. Gymnasium. *Aim.*—To provide on Public School lines thoroughly efficient education in cultured Christian atmosphere.

School Course includes preparation for University Examinations and Scholarships, Drawing, Class Singing, Drill, Needlework, Organised Games, Dancing, and Singing.

Fees.—25 to 28 guineas per term.

ARNSIDE

(Westmoreland). The Medical Officer of Health writes:—"On carboniferous limestone on the northern shore of Morecambe Bay. Sheltered by mountain from the east, and much drier and warmer than the inland district."

BOYS AND GIRLS.

INGLEMERE SCHOOL FOR GIRLS

(Senior House, 95. Junior House, 46. All Boarders. 15 Resident Mistresses).

AYLWIN COLLEGE FOR BOYS

Aylwin House, 40; Claremont, 40; Kingswood, 40. All Boarders. Cadet Corps).

High-class Boarding Schools under the same Principals (MR. & MRS. LLEWELLYN), but no connection otherwise. Separate Staffs, Buildings, and Estates. First boy in British Isles in Arith. Camb. Jnr. Locals, Xmas 1916. Own Farm of 120 acres. Ventilation, Heating, Lighting, and Drainage most modern. Sea and Mountain Air. Good Railway Facilities. Efficient, modern, and comfortable. Refs. to Parents in most districts.

BATH.

The Medical Officer of Health writes:—"Bath City and County Borough. Health resort, Somerset. Pop. 50,721. Only Hot Springs in British Isles. Most perfectly equipped modern bathing establishments in Europe." Extensive Roman remains. Subsoils, freestones, clay, sand and gravel. Elevation, 60 to 750 feet. Climate: where sheltered, similar to southern marine climates; where exposed, good range of temperature and bracing winds. Water-supply, pure and abundant springs.

BOYS.

Founded 1848.

VICTORIA COLLEGE.

Headmaster—

ALEX. W. CUNINGHAME

(Sometime Senior Master, The King's School, Gloucester).

BOARDING AND DAY SCHOOL FOR BOYS.

Preparation for all Examinations.

JUNIOR DEPARTMENT.

GYMNASIUM, SWIMMING, SHOOTING, GAMES.

The School has its own Troop of Boy Scouts.

Entire charge of Pupils from India.

Illustrated Prospectus on application.

BECCELES

(Suffolk). Municipal Borough, 8 miles from Lowestoft. The locality is very healthy; and owing to inland position has a more genial climate than East Coast towns. The River Waveney affords rowing, sailing, and bathing facilities. Pop. 7130.

BOYS AND GIRLS.

THE FAUCONBERGE SCHOOL

(Founded 1712.)

Principal - Rev. H. BIDDELL, M.A.

(Formerly of King's College School, London.)

Premises on high ground, gravel soil, with accommodation for 20 boarders.

Education particularly suited to boys seeking Public School entrance or Scholarships, and also adapted to those who wish to enter Professional life. Girls may be admitted if there is a vacancy. Two open Scholarships.

Gymnastics, Bathing. Good Playing Field.

Boarders' Fees.—£22 per term inclusive.

BOYS AND GIRLS.

"PETERHOUSE,"

QUEEN SQUARE.

BOARDING SCHOOL FOR CHILDREN WHOSE PARENTS ARE RESIDING ABROAD.

Principal - Miss NORRIS.

Limited number of pupils received (girls 5-18, boys under 12). Careful and individual training and education given.

Teaching specially planned to bring out the intelligence and to foster the particular faculties of each child.

Utmost importance attached to matters of Character, Health, Deportment and Physical Development, Elocution, Conversational French.

Fees.—30 to 40 guineas per term.

BECKENHAM.

Population, 33,350. S.E. & C. Rly. One of the select residential and rural suburbs within 8 miles of London. There are excellent social and educational advantages, and the low death-rate testifies to the healthiness of the district.

BOYS.

(Founded 1866.)

THE ABBEY SCHOOL.

(PREPARATORY.)

Headmaster - W. SALTER, M.A.,

Classical Honours, Merton College, Oxford.

Aim.—To be a home of keenness and a power for good, develop character, health. Work and play.

Premises specially designed and constructed in extensive grounds. Climate very healthy, especially suited for young boys. Excellent drainage, central heating. The School has a first-class record for conduct, health, work, and games. Colonial Boys are welcomed and taken entire charge of.

Fees.—36 to 40 guineas per term.

BEDFORD.

The Medical Officer of Health writes:—"Bedford on the Ouse. Railways: Midland, London 47½ m.; L. & N.W. to Oxford and Cambridge. Drainage 10' 7 per 1,000. Two Parks and several smaller than a mile in length. Two Open-air Swimming numerous good Private Schools. Soil, gravel and zymotic death-rates very low." Pop. 39,183.

BOYS.

THE MODERN SCHOOL

(One of the well-known HARPUR TRUST SCHOOLS.) Headmaster, ARNOLD C. POWELL, M.A. (Oxstab.)

Buildings, erected in 1837, have since been enlarged, and Laboratories, Workshop, Smithy, Museum, and Gymnasium added.

Junior and Senior School. Curriculum, on most modern lines, fits boys especially for Business and Commercial careers. Special attention to music.

Entrance and Leaving Exhibitions and special Prizes.

Playing Fields, 10 acres. Rowing, Swimming Officers' Training Corps.

Tuition Fee.—£3 per term (under 12).

Boarding Fee.—£23 6s. 8d. per term.

THE BEDFORD PHYSICAL TRAINING COLLEGE,

LANSDOWNE ROAD.

Principal - Miss STANSFELD.

The COURSE OF TRAINING extends over three years, and includes the THEORY and PRACTICE of Educational Gymnastics, Massage and Medical Gymnastics (Swedish System), Anatomy, Physiology and Hygiene. GAMES—Hockey, Lacrosse, Cricket, Lawn Tennis. Dancing.

Students must be at least 18 years of age.

Fees.—£165 per annum.

Particulars on application to—
The SECRETARY, 37, Lansdowne Road, Bedford.

BEN RHYDDING.

The Medical Officer of Health writes:—"A salubrious health resort in the West Riding of Yorkshire, situated in the Valley of the Wharfe, almost adjoining Ilkley. Fine scenery, moorland expanse, bracing mountain air, and exceptionally pure water-supply. 16 miles from Leeds."

BOYS.

OLEVEDON HOUSE SCHOOL.
WHARFEDALE GRANGE.

Principals - {E. W. STOKOE, M.A.
(C. W. DEAN, M.A.)

Spacious Class-rooms and Dormitories. House heated throughout.

Sanitary arrangements & Water-Supply excellent.

Cricket and Football Field. Tennis Courts. Large open-air Swimming Bath. Air Rifle Shooting. Private Golf Links.

BEXHILL-ON-SEA

(Sussex). The Medical Officer of Health writes:—"Bexhill has always been celebrated for the longevity of its inhabitants. The death-rate for 1925 here was only 13.55. The town holds a first place among health resorts, owing to the general salubrity of the climate, genial influences of invigorating breezes and brilliant sunshine, perfect drainage, the purity of its water, and its freedom from epidemics. The sea-bathing is excellent. Especially suitable for convalescents and delicate children." Golf links, 18 holes. Pop. 15,330.

GIRLS.

THORN BANK.

HOME SCHOOL for Gentlemen's Daughters.

COLLINGTON AVENUE. Close to Sea; excellent sanitation; good garden.

References upon application.

BOYS.

HOLMWOOD SCHOOL.

Situation.—On Hastings Road, on hill commanding fine Channel and inland views.

Buildings.—Excellent sanitation and ventilation. Automatic disinfectors, fire-escapes, Dormitories, Cubicles, Bathrooms, Dark Room for Photography. Gymnasium, Laboratory.

Grounds.—Six acres (Garden, Tennis Lawn, Football and Cricket Ground).

Education.—Efficient preparation for Professions, higher departments of Commerce, Public Schools, and Royal Navy. *Modern Languages* taught conversationally.

Cadet Corps attached to 1st Sussex Engineers.

Headmaster—

A. F. BRYAN, B.A. and Inter. Sci., London.

BEVERLEY.

The Medical Officer of Health writes:—"Beverley is situated at the foot of the elevated country known as the Wolds of the East Riding. The rainfall is very low, averaging 22 inches per annum. The common of over 600 acres is its greatest asset for healthy recreation." Pop. 13,654.

GIRLS.

BEVERLEY HIGH SCHOOL FOR GIRLS.

BEVERLEY, YORKS.

Headmistress - Miss G. M. ROSSITER, B.A.

To supply THOROUGH LIBERAL EDUCATION based upon ideals of great Public Schools.

Importance attached formation of character. Equipment for Home life as well as University careers.

Strain avoided. Health encouraged by Physical Exercises and Games.

Modern Premises in 12 acres. Gymnasium.

Boarding House for 12 pupils in own grounds.

Fees.—Kindergarten Preparatory, £3 3s. Term Day Pupils, £4 4s., £5 5s. Boarders, £20 extra.

BIRMINGHAM

(Warwickshire), the chief town of the Midlands, nearly in the centre of England, is a most progressive and interesting city, noted for its imposing public buildings; the Cornithian Town Hall, where triennial musical festivals are held, contains one of the largest and finest organs in the world. The municipal buildings, law courts, corporation museum and art gallery, and public parks testify to local municipal enterprise. The Birmingham University (formerly the Mason College) is endowed for the study of Arts, Science, Medicine, Engineering, &c.

BOYS.

HARBORNE HALL

(near BIRMINGHAM).

CHURCH OF ENGLAND COLLEGE FOR BOYS.

Headmaster - MONTAGU LAWSON.

Central Heating. Electric Light throughout. Open air and covered Rifle Range, School Farm, School Chapel.

40 acres of Playing Fields.

The School has a large Staff, and specialises in small classes. Thorough preparation for Public Schools and Osborne.

Illustrated Prospectus.

Fees.—125 guineas per annum.

BOYS.

BOURNE COLLEGE, QUINTON.

Headmaster - T. J. STEWART HOOSON, B.A., Inter. B.Sc. (Lond.).

Assisted by Staff of qualified Masters.

Situation.—About 2 miles outside the City of Birmingham. 20 acres of ground. Modern buildings, Workshops, and Chemical Laboratory.

Aim.—To inculcate principles of honour, truthfulness, and *esprit de corps*.

Thorough English and Commercial Education. Training for Universities and other Public Examinations.

Cricket, Football, Tennis, Swimming.

Fees.—25 to 35 guineas per term.

BIRCHINGTON.

(Kent.) Quiet sunny resort on North Kentish coast, $3\frac{1}{2}$ m. W. of Margate. Elevated position; soil, sand and shingle; good bathing; climate beneficial for all cases requiring bracing air and equable temperature. Pop. 2,275. S.E. & C.Rly.

ST. NICHOLAS LODGE,
N.B. BIRCHINGTON-ON-SEA, THANET.

Principal—

H. G. YATES, M.A., Major, M.C., R.F.A.
(Late Exhibitioner Queen's College, Cambridge.)

Prepares boys for the Public Schools and Royal Navy. The School stands on the highest level in Thanet, overlooking the sea.

The first considerations are *Diet and Care of Health*. Instruction aims at *Orderliness of Mind and Intelligence* rather than specialised learning and early brilliance.

The Principal (an old Cambridge Blue) personally coaches the boys in their games.

Fees.—35 guineas per term.

Telegrams and Telephone: 63 Birchington.

BOURNEMOUTH.

The Medical Officer of Health writes:—"Bournemouth is built on a sandy subsoil, the dry and porous nature of which makes it an ideal site for a health resort. Whilst the thousands of pine trees constitute a physical feature of great beauty, their effect is hygienic as well as æsthetic, for the emanations from the myriad pine-needles have an undoubted purifying effect on the atmosphere." The public gardens are very extensive, and excellent facilities are provided for golf, bowls, croquet, and tennis. Pop. 78,674.

GIRLS. FONTAINEBLEAU,
MANOR ROAD.

Principal - Miss C. A. ROWLAND
(Hon. Sch. Modern History, Oxford).

A Home School of the highest type, situated in the Pines on bracing East Cliff close to the Sea.

Illustrated Prospectus on application to Principal.

Telegrams, "Fontainebleau, Bournemouth."
 Telephone, Bournemouth 1046.

Escort to and from Waterloo; further if desired.

GIRLS. SCHOOL FOR DEAF
CHILDREN.

Eaton Rise, Branksome Wood Road, Bournemouth.
(Removed from Eaton Rise, Ealing.)

Principals—Miss HEWETT and Miss PIRRIE.

Children taught to speak. Thorough English education in all subjects given through Speech and Lip-reading. Boarders (girls only) received from three years of age. Free and happy home life, every care. The house stands in its own grounds of two acres, close to moors and pine-woods, and within easy reach of the sea.

Lip-reading lessons given to adults and children who have become deaf. Ladies received as resident pupils.

BLACKPOOL.

The Medical Officer of Health writes:—"Beach, firm clean sand. Good facilities for safe bathing. Owing to its position, exposed to the open sea and the westerly winds, the climate is bracing and invigorating and of a peculiarly tonic character." Pop. 58,371. Sunshine (1920), 1,267 hours.

GIRLS.

HIGH SCHOOL FOR GIRLS.

BOARDING AND DAY SCHOOL.

LYTHAM ROAD, SOUTH SHORE.

Conducted by Miss SMALLPAGE.

Assisted by Resident Mistresses and a large staff of Specialists.

PREMISES are situated in the South of Blackpool; well built, properly ventilated, and fitted with every modern convenience.

Long list of References and Terms may be had on application to PRINCIPAL.

BRIGHTON.

The Medical Officer of Health writes:—"Brighton has the bracing qualities of places on the East Coast with a larger amount of sunshine. It has an unlimited pure water-supply and perfect sanitary arrangements." Sunshine (1920), 1,569 hours. Pop. 121,237.

GIRLS.

THE CLOSE,
70, DYKE ROAD, BRIGHTON.

EDUCATIONAL ESTABLISHMENT FOR THE DAUGHTERS OF GENTLEMEN.

Entire charge of Colonial pupils.

Fees.—Resident pupils, inclusive from £25 a year. *Prospectus and reference on application.*

BRIXHAM

(Devon). Facing Torbay in elevated position. Soil, limestone. Air bracing. Sunny and mild in winter, prevailing winds West. Snow almost unknown. Through train service. London and Midlands (G.W.Rly.). Pop. 7,954.

GIRLS. HILLSIDE COLLEGE,
PARKHAM WOODS.

DAY AND BOARDING SCHOOL FOR GIRLS.

Principals—

Miss N. WILKES, L.L.A.
(Hons. English History, Latin and Education).

Miss M. LE GROS, Certificated Kindergarten.

Thorough modern education, combined with home life. Preparation for all exams. Fully certificated staff. Careful attention given to health and moral training.

Climate especially suited to delicate and Colonial children, who receive every care, one of the Principals being a trained child nurse. Terms moderate.

Prospectus on application to the Principals.

BROADSTAIRS.

The Medical Officer of Health writes:—"Broadstairs is built on cliffs. Aspect, S.E. Has no northerly aspect and is sheltered from cold winds. It is peculiarly fortunate in climatic fluctuations. Remarkably free from fogs and mists. Unusually high record of bright sunshine. The climate is equable and dry, bracing in summer and mild in winter, suitable for invalids and delicate children throughout the year." Sunshine (1920), 1,786 hours. Pop. 8,929.

BOYS. DUMPTON HOUSE.

FOR PUBLIC SCHOOLS AND ROYAL NAVAL COLLEGE, OSBORNE (BOARDERS ONLY).

A. S. ATHAWES, B.A.

(Late Parker Exhibitioner, Corpus Christi College, Cambridge).

BOYS AND GIRLS.

ALEXANDER HOUSE SCHOOL.

(Established over 30 years.)

Good Class Boarding School for Boys and Girls. Beautifully situated on high ground 3 minutes from Sea. Giving a thoroughly Sound Education on Modern lines. Individual attention.

Separate House for Girls. Most careful training. Young, delicate, and backward children receive special attention.

Entire charge taken of Pupils from abroad.

Fees.—From 23 guineas per term.

Prospectus, &c., on application to the Headmaster, or Headmistress.

BUCKHURST HILL

The Medical Officer of Health writes:—"Buckhurst Hill, which prides itself upon its local individuality and accessibility to London, is a modern residential district in Essex, 10½ miles from the Metropolis, well situated amidst healthy surroundings on the borders of Epping Forest."

GIRLS.

BUCKHURST HILL GIRLS' SCHOOL.

Inspected and recognised as efficient by the Board of Education, 1921. The house occupies a high position overlooking miles of open forest land. Carefully graded education for girls 8 to 18. Large and highly qualified Staff. Programmes of the Parents' Union School are followed. Preparation for higher Examinations. Local centre for Senior Oxford. Great attention is paid to health and individual physical development, outdoor life, games, gardening. Grounds nearly 7 acres. Home-like holidays for pupils from abroad.

Principal—Miss BEATRICE GARDNER.

BUDLEIGH SALTERTON

The Medical Officer of Health writes:—"Possesses warm, equable climate. Good bathing, boating, fishing, golf, tennis, croquet. Exceptional freedom from zymotic diseases. Excellent water supply. Modern drainage system. Charming walks and drives." Pop. 1,902.

GIRLS.

MONTPELLIER.

LADIES' SCHOOL.

SEASIDE HOME SCHOOL.

Principal - - - Miss MACDONALD.

Premises.—Detached, stand high on gravel soil facing sea with Garden, Tennis Court, Recreation Field.

Assisted by Resident Trained and Certificated Mistresses and Visiting Masters, and Domestic Science Mistress.

Course of Study includes Scripture, usual English subjects, Modern Languages, Botany, Nature Study, Class Singing, Drawing, Dillig, Needlework, Shorthand and Typewriting. Music a particularly strong feature. Pupils prepared for Cambridge Local Examinations, Royal Academy (Music) Examinations and Royal Drawing Society. Hockey and Tennis under Games Mistress. Girl Guides School Company.

Fees.—From 80 guineas inclusive.

EASTBOURNE.

The Medical Officer of Health writes :—"Its advantages as a health resort are much sunshine, clean, quickly-drying roadways, large parks and gardens with many trees, a plentiful and good water-supply from wells sunk in the deep chalk, and the proximity to the breezy, health-giving South Downs. The climate is beneficial for convalescents and in anæmia, scrofula, and early tubercular disease; excellent for children. Death rate 1911, inclusive, 10.8 per 1,000; of residents, 10.4. Full benefit of winter sun is secured. Warm, sunny shelter always obtainable in centre of town. Beachy Head breaks S.W. winds, and diverts much rain, dryness of soil being promoted by great porosity of chalk. Always at or near the top for sunshine in official records." Sunshine (1920), 1,783 hours.

BOYS.

ST. BEDES.

PREPARATORY SCHOOL FOR THE PUBLIC SCHOOLS AND ROYAL NAVY.

Headmaster - G. H. GOWRING, M.A.

J. WHITAKER & SONS, Ltd.,
12, Warwick Lane, London, E.C. 4.

FOLKESTONE.

The Medical Officer of Health writes:—"Aspect, S. & S.E. The town is one of the best-planned seaside resorts. The comparatively very healthy and dry climate is due to the porous nature of the geological formation and, in addition, the facilities for drainage make mists, damp and fogs almost unknown. The sanitation of the town is carefully guarded, and precautions taken from time to time to maintain its efficiency. For an educational centre it is particularly adapted. A fashionable holiday resort, residential town, and cross-Channel packet station, close to Shorncliffe camp, one and a half hours from London, modern Folkestone stands on a lofty cliff on the Kentish coast facing the Straits of Dover." Sunshine (1920), 1,732 hrs. Pop. 33,502.

BOYS.

Associated Board Piano; Lond. Inst. Plain Needlework. N.F.C. Higher.

Games.—Hockey, Net-ball, Cricket, Tennis.

HARROGATE.

The Medical Officer of Health writes:—"Harrogate is known as the 'Queen of English (Inland) Watering Places,' and is world-renowned for the medicinal properties of its waters and its magnificent baths, which are acknowledged to be the finest in Europe. The distinguishing features of the climate of Harrogate are its bracing atmosphere, low humidity, and abundant sunshine. The mortality is, and always has been, remarkably low." Neighbourhood, open moorlands. Dry, clear air. In winter Harrogate enjoys a comparatively large amount of sunshine, and is exempt from low temperatures. The summer months are free from the high maximum temperatures that are attained in many other places. Water-supply, constant, soft. Soil, alluvial grit and shale. Total sunshine (1920), 1,199 hours

Hastings, the premier Cinque Port, and one of the oldest towns in England, is situated amidst historical surroundings on the Sussex coast, between Pevensey Bay and Rye Bay. St. Leonards, its modern extension to the west, is an integral portion under the one corporation of Hastings and St. Leonards. For more than a century it has been in high repute as a health and pleasure resort; it is an unrivalled watering place for the fragile and sick, and a holiday resort lively throughout the year and patronised by all classes of society. It derives London, its proximity to some of the finest scenery in Sussex, the advantages of its climate which have attracted many permanent residents, private schools and convalescent institutions. Sunshine (1920), 1,739 hours.

GIRLS. WINCHESTER HOUSE SCHOOL.

Building.—Suitably adapted for 150 Boys (Boarders).

Athletic.—Encouraged. 20 acres. Officers' Training Corps.

India and Colonies.—Boys met. Entire charge undertaken.

SOUTHPORT.

The Medical Officer of Health writes:—"Southport is, by its character as a modern 'Garden City,' eminently suited as a place for schools. All its houses, detached or semi-detached, have their own gardens. Its soil is sandy, clean, and dry. The streets are broad, well kept, and planted on each side with trees. The air, generally from the sea, is clean, pure, and of even temperature. The water supply is a public one, excellent in quality and quantity. The air of Southport is very mild, dry, and also equable. In the height of summer it is not unduly hot, but it is pre-eminently a winter resort, and has almost a model atmosphere for kidney complaints and bronchial affections." Sunshine (1920), 1,277 hours. Pop. 51,643.

BOYS. BICKERTON HOUSE
(FORMERLY MATHWIN'S),
BIRKDALE.

Health and general welfare of boys under personal direction of Mrs. Pooley and two Lady Matrons.

Cricket, Football, Hockey, Swimming, Boy Scout Troop.

Fees.—150 guineas per annum.

WESTON-SUPER-MARE.

The Medical Officer of Health writes :—" Lies on the shores of Weston Bay in the Bristol Channel, on the sea-ward of the Mendips, covering the southern slopes of Worlebury, and the alluvial and sandy plain at its foot. Well protected from the cold northerly winds by the Weston-Worle ridge, and open to pure invigorating breezes direct from the Atlantic Ocean, the town has an equability of climate through all the seasons of the year, difficult to find anywhere else in England. Its climate is equable and dry—bracing in summer, warm in winter, being sheltered against the east wind by the Mendip range. Favoured with a dry sub-soil, a high sunshine record, and remarkably free from infectious diseases, the town is admirably suited for invalids and delicate children, and is pre-eminently delightful as a holiday centre, with numerous beauty spots."

A spacious asphalted marine parade and carriage drive extends for over two miles; protected by a sea wall. The piers of Weston-super-Mare are amongst its chief attractions.
Sunshine (1900), 1,250 hours. Water-supply, constant. Drainage, modern. Soil, sandy.
Pop. 23,335.

BOYS.

(Founded 1877.) ETONHURST

PREPARATORY SCHOOL FOR SONS OF GENTLEMEN

(Between ages of 6 and 15).

Harrogate

is situated on the Yorkshire Moors, on a tableland with nothing higher between it and the Sea (60 miles away), with no works or factories near, and the air is naturally pure and bracing. The surrounding country teems with beauty spots and historical associations. Roads are excellent for motoring. Golf (3 links—Sunday play), Angling, Shooting, Boating, Tennis, Croquet, &c. The Entertainments and Music are of a very high order. Alfresco Concerts and Teas are a feature, the shops are excellent, and the social amenities are all that can be desired. The "CURE" is of course second to none the wide world over, and renders the German and Austrian resorts absolutely unnecessary.

For details of Hotels, Trains, and
Harrogate generally, write—

CAPITAL STOCK - - - - £400,000

DEBENTURE STOCK - - - - £331,130

Chairman. SIR RICHARD STEPHENS TAYLOR.

Deputy-Chairman: LEONARD WILLIAM NORTH HICKLEY, Esq.

PURCHASES.—The Society purchases Reversions and Remainders, whether absolute or contingent, Life Interests, whether in possession or deferred, and generally all Interests (in approved property) that depend upon the duration of human life.

LOANS.—The Society also grants Loans on the security of such Interests, either on Ordinary Mortgage or by way of Reversionary Charge. The latter mode meets the convenience of borrowers who do not wish to make any payment for either principal or interest until their Reversionary Property falls into possession. The amount to which the Society will then be entitled is fixed at the outset, and does not depend on the time elapsing between the grant of the Loan and its repayment.

Forms of Proposal and full information can be obtained at the Society's Offices.

G. H. MAYNE, *Secretary*. [254]

Charitable Bequests of the Year.

APPENDED is a list of the principal bequests for charitable purposes recorded during the year. The amount for charitable purposes is, in a considerable proportion of the cases, approximate, owing to the bequests including a share of the residuary estate of the testator, or consisting wholly or in part of business interests, or of blocks of shares for which a definite value cannot be given. Although hospitals figure very largely, and the amounts for the benefit of these institutions are considerable, these charities continue to suffer severely from shortage of funds. It would appear to be a desirable reform of the Death Duties that sums left for this purpose should be free of both Estate and Legacy Duty. In the case of very large estates, where the bequests have to bear their proportion of both Estate and Legacy Duties, these bequests may be subject to a deduction up to 40 per cent. for Estate Duty and a further 10 per cent. on the balance for Legacy Duty. Works of art and objects regarded as of National interest and importance are exempt under the Finance Act, and, while it may be difficult to draw the line generally as to what constitutes a charitable institution, there would be no difficulty in defining a hospital in the generally accepted sense of such an institution.

CHURCH MISSIONARY SOCIETY

SALISBURY SQUARE, LONDON, E.C.4.

VICE-PATRON THE ARCHBISHOP OF CANTERBURY
 PRESIDENT COL. SIR ROBERT WILLIAMS, Bt., M.P.
 HONORARY SECRETARY THE REV. CYRIL C. B. BARDSLEY, D.D.

"Christ intends the normal life of every disciple to be one of witnessing to Himself, and of sharing through the power of the indwelling Spirit in the evangelization of the world."

The Church Missionary Society's field of work covers large areas in Africa, India, China, Japan, Persia, and Palestine, often where no other Society is at work. There are on the staff 1,339 European missionaries and 14,013 Native Christian workers.

In **AFRICA** many villages are waiting for teachers, and may be won over to Mohammedanism while we delay. In **INDIA** the outcastes are longing for light and freedom, and are pressing into the Christian Church; but the missionaries have to refuse to baptize them because there is no one to shepherd the new congregations. **JAPAN** grows in wealth and worldly knowledge, but she needs Christian ideals to lighten the life of her great cities and save her students from despair.

During the last year there have been 42,805 baptisms, and an increase of 33,558 in the number of adherents; the mission hospitals have received 45,427 in-patients and 840,915 out-patients, all of whom have heard the Gospel message; 295,900 students have attended the C.M.S. institutions, colleges, and schools; churches are becoming self-supporting, and the number of native Christian workers has increased.

TO MAINTAIN THIS WORK AN INCOME OF £600,000 IS NEEDED THIS YEAR.

THE DOGS' HOME

**OR TEMPORARY HOME FOR
 LOST AND STARVING DOGS**

(An Institution for the Protection of Dogs & Cats)

**4, BATTERSEA PARK ROAD, S.W. 8.
 and HACKBRIDGE, SURREY.**

(For Boarder and Quarantine Dogs Only)

Patron:

His Most Gracious Majesty the King.

President:

His Grace the DUKE OF PORTLAND, K.G.

OBJECTS:

1. To provide food and shelter for the lost, deserted, and starving dogs of London and the immediate neighbourhood.
2. To restore lost dogs to their rightful owners.
3. When good dogs are unclaimed, to find suitable homes for them at nominal charges.
4. To destroy, by a merciful and painless method, all valueless and diseased dogs.

**Out-Patients' Department (Dogs and Cats only), at Battersea,
 Thursdays, 3.0 p.m.**

**Dogs and Cats can be received as Boarders at Hackbridge, and
 Dogs for Quarantine under the Importation of Dogs Order, 1914.**

Contributions will be thankfully received by

G. GUY S. ROWLEY, Secretary, (150

GENERAL LYING-IN HOSPITAL,

York Road, Lambeth, S.E. 1.

ESTABLISHED 1765.

Patrons—H.M. The Queen and H.M. Queen Alexandra.

This Hospital is situated in one of the poorest parts of London, in the district South of the Thames, with a population of nearly two millions.

Married women in indigent circumstances, especially the wives of Soldiers and Sailors, and certain single women (with their first child, after investigation by the Committee), are admitted to the Hospital from all parts of the kingdom, but mainly from the immediate neighbourhood, from which, owing to its poverty, little pecuniary help is obtainable.

Subscriptions and Donations thankfully received by the Treasurer, or Miss ROSE E. WHYTE, the Secretary, at the Hospital. (146)

THE GIRLS' FRIENDLY SOCIETY

Patrons—Her Majesty the QUEEN; Her Majesty QUEEN ALEXANDRA.

President—The Hon. Lady Cunliffe, C.B.E.

Secretary—Miss Mytton.

The G.F.S. was founded in 1875, and has now a total of over 300,000 Associates and Members, who are girls and women of all ages, and drawn from all ranks of society. Its object is:—

"To unite for the Glory of GOD in one Fellowship of Prayer and Service, the Girls and Women of the Empire; to uphold Purity in Thought, Word and Deed."

The Society works almost all over the world, and its departments are very varied. They include an Invalids' Work Depot, Clubs, Hostels, Holiday Camps, Homes of Rest, Savings Associations, Girl Guides, and the maintenance of a Social Centre in South London.

Donations towards any of these activities will be thankfully received, and further information will be gladly given by—

THE SECRETARY, G.F.S. Central Office, 39, Victoria Street, London, S.W. 1

Telegram—"AUGUST, VIC, LONDON."

Telephone—2321 Victoria

THE GORDON BOYS' HOME

(THE NATIONAL MEMORIAL TO GENERAL GORDON).

Patron—THE KING

Vice-Patrons—H.M. THE QUEEN and H.M. QUEEN ALEXANDRA.

THE HOME IS SITUATED AT WEST END, WOKING, NEAR BROOKWOOD.

The Home is constructed to accommodate 250 Boys, chosen from the homeless and destitute, between the ages of about 14 and 15½, and give them a training, up to the age of 17 or thereabouts, which will fit them alike for civil life in this country or its Colonies, and for service in the Army, Navy or Mercantile Marine.

CONDITIONS OF ADMISSION—1. The age for admission is from about 14 to 15½ years. 2. A boy must, in the opinion of the Committee, be really necessitous. 3. He must be free from such physical or mental infirmity as would disqualify him for service in the Army or Navy, or for civil employment in the Colonies or elsewhere, which would require active bodily exertion. 4. Boys of known bad character are ineligible.

Free admission is given to such number of boys as above as can be provided for out of the general income of the Home. A guaranteed payment of £35 annually during his stay at the Home will give a right of nomination for a lad fulfilling the conditions of admission. *Subscriptions and Donations are urgently needed in order that the above number of boys may be maintained.*

Subscriptions are received by THE LONDON COUNTY WESTMINSTER AND PADE'S BANK, 1, St. James's Square, S.W.; by the Treasurer, General the Right Hon. Sir DIGHTON PROBYN, V.C., G.C.B., Marlborough House, S.W.; and by the Governor at the Home, from whom any further information can be obtained. For financial reasons the London Office has been abolished.

E. G. MARKHAM, Esq., Secretary.

GUY'S HOSPITAL

LONDON BRIDGE, S.E. 1.

NEEDS HELP.

President: H.R.H. THE PRINCE OF WALES, K.G.

BEDS, 613. IN-PATIENTS (1920), 9,309. OUT-PATIENTS, 106,292.

EXPENDITURE (1920), £166,293; INCOME FROM ENDOWMENTS, £54,807.

Over £100,000 per annum required from sources other than endowments.

A copy of the last published Annual Report of the Hospital will be forwarded on application to The Clerk, Counting House, Guy's Hospital, S.E. 1.

Treasurer: VISCOUNT GOSCHEN.

SEPTEMBER, 1921.

Bankers—THE BANK OF ENGLAND.

[314]

THE HOSPITAL FOR DISEASES OF THE SKIN,

Telephone: Hop 1021.

70-71, BLACKFRIARS ROAD, S.E.

ESTABLISHED 1841.

Patroness—HER MOST GRACIOUS MAJESTY QUEEN ALEXANDRA.*Treasurer*—THE RT. HON. THE LORD MORRIS P.C., K.C.M.G.

This Hospital is the oldest in London specially devoted to the study and treatment of diseases of the skin. It is thoroughly equipped with the most modern therapeutic appliances.

Unfortunately, the present position of the finances of the Hospital will not permit the re-opening of the In-Patient Department, which was closed owing to lack of funds. Donations and more Annual Subscriptions are urgently desired.

The practice of the Hospital is open to all qualified medical practitioners and senior students.

Since the foundation of the Hospital in 1841, over 534,000 patients have been treated.

Patients are required to contribute towards the funds of the Hospital according to their means, and should attend daily at 1.30 p.m., or on Fridays at 6 p.m.

This Hospital is a centre for the treatment of Venereal Diseases under the London County Council scheme.

FREDERICK HAYTER, *Secretary*.

[122]

LONDON CITY MISSION

Instituted 1835.

260 Agents Employed.

The Society exists for the social and spiritual uplift of the millions of London, chiefly the poor and the artisan classes. Besides preaching the Gospel from house to house, and in Hospitals and Poor Law Institutions, the Missionaries visit the great centres of industry—Government works, docks and wharves, rail and goods yards, public offices, and wherever the masses foregather, either for business or pleasure—teaching the principles of righteousness and truth, and urging their application to daily life and conduct.

£1,000 required week by week for the maintenance of the Society's daily operations among the poor and working classes of the Capital.

Treasurer: W. G. BRADSHAW, Esq., C.B.E. *Secretary*: THE REV. W. P. CARTWRIGHT, M.A.

London Lock Hospital and Home.

Patron - - H.M. THE KING.

Founded 1746, this Special Hospital has for 176 years devoted all its energies to the treatment of venereal diseases. Thousands of young women and girls from all parts of the kingdom have been relieved of their bodily suffering and helped to regain their self-respect, and thereby enabled to make a fresh start in life.

Annual Subscriptions, Donations and Legacies are earnestly pleaded for, and will be gratefully received by the Hon. Treasurers,

LORD KINNAIRD, K.T., and J. F. W. DEACON, Esq., M.A., D.L., J.P.,
or by HY. J. EASON, *Secretary*.

Offices: 283, HARROW ROAD, LONDON, W. 9.

THE NATIONAL BENEVOLENT INSTITUTION,

FOUNDED BY THE LATE PETER HERVÉ.

ESTABLISHED 1812.

INCORPORATED BY ROYAL CHARTER.

Under the Patronage of His Most Excellent Majesty KING GEORGE V.
Treasurer—ROBERT W. DIBDIN, Esq., J.P.

This Institution grants Annuities of £21 to distressed members of the Upper and Middle Classes of Society who have attained the age of 60 years and upwards.

• The Pensioners are elected half-yearly, in May and November, by the votes of the Life Governors and Subscribers.

The sum disbursed in Pensions now amounts to over £15,200 per annum.

The total number of aged Persons who have been supported by the Institution is Three Thousand Eight Hundred and Sixty-Nine, the gross sum distributed to them up to the present exceeding £848,700.

Subscriptions from 5s. and upwards will be thankfully received at the Office, and any further information given between the hours of 10 and 4 daily; Saturdays, 10 and 2.

ROYAL FEMALE ORPHANAGE

(Incorporated by Special Acts of Parliament as the FEMALE ORPHAN ASYLUM),
BEDDINGTON, near CROYDON.

FOUNDED 14th March, 1758.

Patrons—HIS MAJESTY THE KING.

HIS MAJESTY THE QUEEN.

H.R.H. THE PRINCE OF WALES, K.G.

President—HIS GRACE THE DUKE OF PORTLAND, K.G.

THE OLDEST GIRL'S ORPHANAGE IN THE WORLD.

Fatherless girls are admitted between the ages of 7 and 10 years, and educated and maintained until they are 16, when situations in private families are found. Applicants must be thoroughly sound and healthy.

4,000 girls have already been maintained, the majority being provided with situations. Many War Orphans are amongst the present inmates.

PLEASE HELP.

Annual Subscriptions are urgently needed. Half-a-guinea will give one vote.

Bankers for 150 years—MESSRS HOARE.

LEGACIES ARE ESPECIALLY SOLICITED.

ERNEST J. BAYLEY, Secretary.
